

Almega™ Dispersive Raman System

Continuum™ IR Microscope

Unmistakably
family—with
a personality
all its own.

Meet our newest micro sampling family member, the Centaurus™ IR microscope. At first glance, you'll notice it's compact and multitasking. A closer inspection will also reveal its rugged workhorse persona.

The talented micro sampling family from Thermo Nicolet embraces both IR and Raman technologies. With such an impressive lineup, you'll find one instrument with the exact capabilities to meet your needs.

To see which member of our micro sampling family best suits your situation, visit www.thermonicolet.com. Better yet, call us. Together we'll make a perfect match.

- ✓ Intuitive Interface Built for Microscopists

JEOL JSM-5000 Series SEM's

Multi-Purpose and Low Vacuum Scanning Electron Microscope

For more info. →

www.jeol.com

With the JSM-5000 Series Microscopes we have the perfect SEM for your projects and budget. All of these microscopes come with optional low vacuum capability and the JSM-5900 has the ability to fully view an 8 inch diameter specimen.

All were designed from the ground up as PC-SEM's. This means that they can be controlled completely and efficiently from only the keyboard and mouse, or if you prefer from the included knobset—or a combination of both. It's really whatever you prefer, which proves that we really do have your next SEM. Call us!
