NOTES FOR AUTHORS

Papers submitted for publication in the Bulletin of Entomological Research should be sent, in duplicate, to the Director, C-A-B International Institute of Entomology, 56 Queen’s Gate, London SW7 5JR. They must deal with original research concerning insects, mites or ticks of economic importance in the agricultural, medical or veterinary fields; they must be of more than purely local interest, and taxonomic papers will not be accepted unless the organisms dealt with are of definite importance in the field of applied entomology. Review articles may also be submitted, but will normally be by invitation. Papers must not have been published or accepted for publication elsewhere. They will normally be published in order of their receipt in definitive form.

Text

Papers should be typewritten (double spaced, with ample margins and on one side of the paper only) and a current number of the Bulletin should be consulted for details of style and lay-out. Titles should be as brief as is consistent with clarity. Abbreviations should conform to British Standard 1991, Part I, 1967, and are alike in singular and plural; stops will be used only where ambiguity might occur, e.g. ‘in.’ not ‘in’ for inch, but ‘in²’ for square inch. Metric units are preferred; if non-metric units are used, metric equivalents should be given at least once in each article.

Tables

Tables should be reduced to the simplest form, and should not be used where text or illustrations give the same information. They should be submitted on separate sheets at the end of the article and must on no account be of a size or form that will not conveniently fit into the page of the Bulletin.

Illustrations

Line drawings and graphs must be in jet-black indian ink, preferably on Bristol-board or tracing cloth. Graphs may be drawn on paper ruled in pale blue or light grey; paper having green, red, yellow or brown lines should not be used. Any stippling or hatching, as well as any numerals or lettering, on the text-figures must be completed, by the author, in a form suitable for reproduction; this work is not undertaken by the printer. Text-figures, when reproduced, cannot exceed 12.7 cm in width; if, therefore, the original drawings are larger, the lettering on them must be in proportion, so that it is still legible when reduced; special attention should be paid to the relative scales of lettering and line thicknesses in relation to the figure as a whole. Photographs for reproduction as figures are admissible when they are a real contribution to the text. Captions to figures should be typed on a separate sheet.

Abstract

Each paper must contain a carefully prepared and accurate informative abstract that shall be complete in itself and intelligible without reference to the text or figures. It should not exceed 250 words, and should be included at the beginning immediately after the title, author and author’s affiliation.

References

References must be based on the name and year system and conform to the present usages of the Bulletin. Titles of journals should be abbreviated as in the 4th edition of The World List of Scientific Periodicals. References to unpublished information should normally be included only in the text—(A. B. Jones, pers. comm.) or (A. B. Jones, Control of sandflies by insecticides. Unpublished report. Ross Institute, London, 1950).

Offprints

Free copies of offprints are allowed as follows: One author—20 copies, two or more authors—30 copies. Further copies may be obtained on payment, and the number required should be specified when the paper is submitted.
Field trials of baits to control populations of *Glossina morsitans morsitans* Westwood and *G. pallidipes* Austen (Diptera: Glossinidae) .......................................................... 179

Correct name for the species of *Chilozea* (Lepidoptera: Pyralidae) whose caterpillars damage cassava in South America .......................................................... 195

The incidence and distribution of the armyworms *Mythimna convecta* (Walker) and *Persectania* spp. (Lepidoptera: Noctuidae) and their parasitoids in major agricultural districts of Victoria, south-eastern Australia .......................................................... 199

Capture-recapture studies with mosquitoes of the group of *Anopheles punctulatus* Donitz (Diptera: Culicidae) from Papua New Guinea .......................................................... 211

Tick (Acari: Ixodidae) ecological studies in Tanzania .......................................................... 229

Evidence of persistent populations of the African armyworm, *Spodoptera exempta* (Walker) (Lepidoptera: Noctuidae), in east-central Tanzania .......................................................... 247

Spatial and temporal population patterns of *Aonidiella aurantii* (Maskell) (Hemiptera: Diaspididae) parasitoids (Hymenoptera: Aphelinidae and Encyrtidae) caught on yellow sticky traps in citrus .......................................................... 265

The eradication of *Glossina palpalis palpalis* (Robineau-Desvoidy) (Diptera: Glossinidae) using traps, insecticide-impregnated targets and the sterile insect technique in central Nigeria .......................................................... 275

The potency and effect of phytotoxins within yellow split-pea (*Pisum sativum*) and adzuki bean (*Vigna angularis*) on survival and reproductive potential of *Sitophilus oryzae* (L.) (Coleoptera: Curculionidae) .......................................................... 287

Evaluation of a method for maintaining age-structured populations of house-flies, *Musca domestica* L. (Diptera: Muscidae), to study the evolution of insecticide resistance .......................................................... 297

The behaviour of *Anopheles minimus* Theobald (Diptera: Culicidae) subjected to differing levels of DDT selection pressure in northern Thailand .......................................................... 303

A mark-release-recapture demonstration of host-preference heterogeneity in *Anopheles minimus* Theobald (Diptera: Culicidae) in a Thai village .......................................................... 313

The enzyme-linked immunosorbent assay (ELISA) test for the identification of blood-meals of haematophagous insects .......................................................... 321

An evaluation of a sequential aerial spraying operation against *Glossina pallidipes* Austen (Diptera: Glossinidae) in the Lambwe Valley of Kenya: aspects of post-spray recovery and evidence of natural population regulation .......................................................... 331

The identity and distribution of the genus *Maconellicoccus* Ezzat (Hemiptera: Pseudococcidae) in Africa .......................................................... 351
