Aims and Scope: JINS is the official journal of the International Neuropsychological Society, an organization of over 3,700 international members from a variety of disciplines. Our editorial board is comprised of internationally known experts with a broad range of interests. JINS publishes empirically-based articles covering all areas of neuropsychology and the interface of neuropsychology with other areas, such as cognitive neuroscience. Theoretically driven work that has clinical implications is of particular interest. To assure maximum flexibility and to promote diverse mechanisms of scholarly communication, the following formats are available.

Regular Research: Maximum of 5,000 words (not including abstract, tables, figures, or references) and a 200 word abstract. Regular Research papers are original, creative, high quality papers covering all areas of neuropsychology; focus may be experimental, applied or clinical.

Brief Communication: Maximum of 2,500 words (not including abstract, tables, figures, or references) and a 150 word abstract, with a maximum of two tables or two figures, or one table and one figure, and 20 references. Brief Communications are shorter research articles.

Neurobehavioral Grand Rounds: Maximum of 5,000 words with an informative literature review (not including abstract, tables, figures, or references) and a 200 word abstract. Neurobehavioral Grand Rounds are unique case studies, which are usually published with an introduction by an expert in the field to put the case into a more global perspective.

Critical Review: Maximum of 7,000 words (not including abstract, tables, figures, or references) and a 100 word abstract. Critical Reviews are reviews by experts on important topics in neuropsychology. Critical Reviews must be preapproved by the Department Editor. For consideration, please e-mail your abstract to jins@unm.edu.

Short Review: Maximum of 2,500 words (not including abstract, tables, figures, or references) and a 100 word abstract. Short Reviews are conceptually-oriented snapshots of the current state of a research area by experts in that area. Short Reviews must be preapproved by the Department Editor. For consideration, please e-mail your abstract to jins@unm.edu.

Dialogues: Maximum of 2,000 words for each segment (not including abstract, tables, figures, or references) and a 100 word abstract. Dialogues are conceptually-oriented discussions of the current state of a research area by experts in that area. Dialogues may be preapproved by the Department Editor. For consideration, please e-mail your abstract to jins@unm.edu.

Symposia: Maximum of 5,000 words (not including abstract, tables, figures, or references) and a 200 word abstract. Symposia consist of several thematically linked research articles which present empirical data. Symposia must be pre-approved by the Department Editor. For consideration, e-mail your proposal to jins@unm.edu to receive prior approval.

Letters to the Editor: Maximum of 500 words (not including table, figure, or references) with up to five references, one table, or one figure. Letters to the Editor respond to recent articles in the Journal of the International Neuropsychological Society.

Book Reviews: Maximum of 1000 words in length. Include name and affiliations, a title for the review, the author(s)/editor(s), title, publisher, date of publication, number of pages and price. Book Reviews are invited by the Book Review Editor. For consideration, e-mail jins@unm.edu.

Manuscripts will be returned if they exceed length requirements.

Scientific articles, including Regular Research Articles, Brief Communications, Symposia and Special Series, should include the following in the order shown: Title Page, Abstract, Introduction, Methods, Results, Discussion, References, Appendices, Acknowledgments, Tables, Figure Legends, and Figures.

The use of abbreviations, except those that are widely used, is strongly discouraged. They should be used only if they contribute to better comprehension of the manuscript. Acronyms should be spelled out at first mention. Metric system (SI) units should be used. Pages should be numbered sequentially beginning with the Title Page.

The Title Page should contain the following: the full title of the manuscript, the full names and affiliations (department, institution, city, state) of all authors, a contact address with telephone and fax numbers and e-mail address, and the word count for abstract and for manuscript (excluding title page, abstract, references, tables, and figures).

A running head should appear in the upper right hand corner of every page. It should begin with the lead author’s last name followed by the abbreviated title and end with the page number.

Abstract and Mesh Terms (Keywords) begin on page 2 and should include a brief statement of the problem, the method, the key findings, and the conclusions. Six mesh or key words not duplicated in the title should be provided, see http://www.ncbi.nlm.nih.gov/entrez/query.fcgi?db=mesh.

The Introduction should begin on page 3.

The Methods section should include the following: Compliance with institutional research standards for animal or human research (including a statement that the research was completed in accordance with the Helsinki Declaration http://www.wma.net/e/policy/17-c_e.html).

Appendices and Supplemental Materials may be submitted. If the material is intended for print, include it in the single.doc manuscript file. If the material will appear only online, please submit it in a separate.doc file.

The Acknowledgements Section should include a disclosure of all financial support and indicate there are no conflicts of interest. Financial support: Please provide details of the sources of financial support for all authors, including grant numbers. For example, “This work was supported by the National Institutes of Health (grant number XXXXXXXX).” Multiple grant numbers should be separated by a comma and space, and where research was funded by more than one agency the different agencies should be separated by a semi-colon, with “and” before the final funder. Grants held by different authors should be identified as belonging to individual authors by the authors’ initials. For example, “This work was supported by the Wellcome Trust (A.B., grant numbers XXXX, YYYY), (C.D., grant number ZZZZ); the Natural Environment Research Council (E.F., grant number FFFF); and the National Institutes of Health (A.B., grant number GGGG), (E.F., grant number HHHH).” Where no specific funding has been provided for research, please provide the following statement “This research received no specific grant from any funding agency, commercial or not-for-profit sectors.”

Tables and Figures should be numbered in Arabic numerals. Figures should be numbered consecutively as they appear in the text. Any indication of features of special interest should also be included. Figures should be twice their intended final size and authors should do their best to construct figures with notation and data points of sufficient size to permit legible photo reduction to one column of a two-column format.

Please upload your figure(s) in either a .doc or .pdf format. Color figures are accepted with no cost. When uploading figures (color or black and white) they need only be a high enough resolution for the reviewers and editors to identify the information you are trying to convey.

The approximate position of each table and figure should be provided in the manuscript: [INSERT TABLE 1 HERE]. Tables and figures should be on separate pages. Tables should have short titles and all figure legends should be on separate pages.

Special Note Regarding Figures: If you plan to use figures or tables that have been redrawn or modified from other publications, and you are not the copyright holder, please obtain permission for this re-use. Authors should err on the side of caution and seek advice from the editorial office if they are uncertain whether to seek permission.

References: References should be in American Psychological Association, 6th Edition, style (see the examples presented below).

Text references should be cited as follows: “...Given the critical role of the prefrontal cortex (PFC) in working memory (Cohen et al., 1997; Goldman-Rakic, 1987; Perlstein et al., 2003a, 2003b) ...” with multiple references in alphabetical order. Another example is: “For example, Cohen et al. (1994,1997), Braver et al. (1997), and Jonides and Smith (1997) demonstrated . . .” References cited in the text with two authors should list both names. References cited in the text with three, four, or five authors, list all authors at first mention; with subsequent citations, include only the first author’s last name followed by et al. References cited in the text with six or more authors should list the first author et al. throughout. In the reference section, for works with up to seven authors, list all authors. For eight authors or more, list the first six, then ellipses followed by the last author’s name. Examples of the APA reference style are as follows:

9th Congress of the International Neuropsychiatric Association
Treating Neuropsychiatric Illness: A Multidisciplinary Effort
September 25-27, 2013
The Congress Plaza Hotel and Convention Center
Chicago, IL

Please join us in the beautiful city of Chicago for the 9th Congress of the International Neuropsychiatric Association (INA). The Association is dedicated to increasing the understanding of brain function and human behavior with the purpose of improving care and lives of people with brain-behavior disorders. The Congress provides a forum for the exchange of knowledge and ideas among professionals in various disciplines, including but not limited to neuropsychiatry, behavioral neurology, neuropsychology, and neuroscience. The theme of the Congress is Treating Neuropsychiatric Illness: A Multidisciplinary Effort. An exciting scientific program is planned with speakers from around the world. Some of the highlights include:

Neuroscience, Memory and the Law. Dr. Michael Kopelman (UK)

The Future of Neuropsychology in Clinical Neurosciences. Dr. Neil Pliskin, PhD (USA)

Health Care Systems: A World Perspective. Dr. James Ausman (USA)

Epilepsy: Clinical, Surgical and Cross-Cultural Aspects. Dr. Andres Kanner (USA) and Dr. Michael Trimble (UK)

Please visit our website to view the rest of the program and to register for the Congress
www.inawebsite.org

Call for Abstracts:

We are welcoming submission of abstracts for poster presentations with a focus on innovative research in the areas of neuropsychiatry, neuropsychology, neuroscience, behavioral neurology, neuroradiology, and rehabilitation. Please visit our website for submission guidelines.
Submission deadline is March 1, 2013.

We are looking forward to seeing you in Chicago!
Knowledge is no longer shelved

The Cambridge Journals Digital Archive contains more than 160 journals, more than 3 million pages and more than 8 million linked references. Knowledge is now more visible and more searchable than ever.

In the Thomson Reuters 2010 Journal Citation Reports®, Cambridge journals saw an average increase in Impact Factor of almost 16.4%.

Cambridge’s Humanities and Social Science journals increased by 23.7%, against a 0.1% average increase in the SSCI*.

Cambridge Science, Technology and Medicine journals increased by 10.6% in comparison to a 1.8% average increase in the SCI*.

This picture is based on figure 8 of "The effect of sudden source buoyancy flux increases on turbulent plumes", by M.M. Scase, A.L. Aspden & C.P. Caulfield. Journal of Fluid Mechanics, Volume 635

* The comparison of percentage changes refers to those categories that include Cambridge journals only and not the entire collection of SCI or SSCI journals.
| RESEARCH ARTICLES |  
|-------------------|--------------------------------------------------|
| 739   | Cognitive Reserve and Brain Reserve in Prodromal Huntington’s Disease | A. Bonner-Jackson, J.D. Long, H. Westervelt, G. Tremont, E. Aylward, J.S. Paulsen, and The PREDICT-HD Investigators and Coordinators of the Huntington Study Group |
| 763   | Age-Related Changes in Error Monitoring of an Everyday Task | S. Balouch and J.M. Rusted |
| 773   | Performance of Older Japanese American Adults on Selected Cognitive Instruments | N. Kemmotsu, Y. Enobi, and C. Murphy |
| 782   | Prefrontal Cortex Activity during Response Selection Predicts Processing Speed Impairment in Schizophrenia | N.D. Woodward, B. Duffy, and H. Karbasforoushan |
| 802   | Frontal Defects Contribute to the Genesis of Closing-in in Alzheimer’s Disease Patients | N. De Lucia, D. Grossi, A.M. Fasanaro, S. Carpi, and L. Trojano |
| 809   | Decreased Cognitive Function in Extended Family Members from the Single Late-Onset-Alzheimer’s-Disease Pedigree | Y. Zeng, W. Chang, C. Shu, L. Ma, Y. Huang, R. Wang, J. Zhang, C. Zhu, and S.M. McClintock |
| 820   | Time-on-Task in Children with ADHD: An ex-Gaussian Analysis | V. Tarantino, S. Cutini, C. Mogentale, and P.S. Bisiacchi |

| BRIEF COMMUNICATION |  
|---------------------|--------------------------------------------------|
| 829   | Pediatric Sleep Difficulties after Moderate–Severe Traumatic Brain Injury | R.E. Sumpter, L. Dorris, T. Kelly, and T.M. McMillan |
| 841   | The Influence of Cognitive Reserve on Strategy Selection in Normal Aging | D.J. Barulli, B.C. Rakitin, P. Lemaire, and Y. Stern |

| BOOK REVIEWS |  
|--------------|--------------------------------------------------|
| 845   | The Neuropsychology of Psychopathology, Chad Noggle and Raymond Dean (Eds.) | L.E. Mallory |

| CORRIGENDUM |  
|-------------|--------------------------------------------------|
| 848   | Age-Related Changes in Error Monitoring of an Everyday Task | S. Balouch and J. Rusted |
