Conclusion: The outcome document will be used as a reference guide to build on existing knowledge in mobile health service delivery in complex emergencies.

Prevention and Risk Management from Nature to Society: How can Medicine Help Reduce the Refugee Crisis in Mexico?
Joanne Joly
Ya Respondiste A.C, Ciudad de México/Mexico

Study/Objective: To sensitize Mexican doctors on preventing immigrant disease complications.

Background: Mexico serves as a halfway point for immigrants seeking safety and a better life. Many of these refugees carry severe diseases that complicate matters. These complications could be prevented by proper and timely treatment. Currently, there are no programs targeted at immigrant health. Doctors should be sensitized to the current situation and the need to prevent health complications.

Methods: Retrospective, observational, longitudinal study of refugee patients found in Mexico City; 200 refugee patients (ages 11 to 55) found in immigrant homes and hotels working with the Responde A.C. Foundation were included. 1. Three different sites were selected, where there was a higher density of patients. 2. Specialized and experienced doctors enrolled the patients through a weekly triage. 3. A clinical file was created for each patient containing a full medical history and background on the patient. 4. Patients were given a weekly follow-up for 2 months, during these follow-ups they were asked about their recovery progress. A clinical consult was given to monitor their progress.

Results: We found that there is a constant need for general and specialized medical care among refugees in Mexico. Providing timely and appropriate care showed improvement in the patients perceived quality of life. The 130 patients showed good progress, 20 patients developed complications, and 50 patients were lost during follow-up. At the present time, the statistical analysis will conclude by the end of 2016.

Conclusion: There is an immigrant crisis in Mexico, and health-care providers should be aware of this problem and action should be taken to prevent this crisis from continuing to grow. This study shows the importance of timely and accurate medical care, and the impact it could have in preventing complications and improving the quality of life of refugees in Mexico.

Evidence: Aid Special Collection for the Health of Refugees and Asylum Seekers
Claire Allen1, Jeroen Janzen2, Tony Aburrow3
1. Evidence Aid, Evidence Aid, Oxford/United Kingdom
2. Evidence Aid, Oxford/United Kingdom
3. John Wiley and Sons Limited, Chichester/United Kingdom

Study/Objective: To build collections of health care evidence, to provide those addressing the health of refugees with some guidance, collections divided between Evidence Aid and Cochrane.

Background: In 2015, over one million people arrived in Europe by sea, mostly originating from Syria. In the same year, 3,771 people went missing or died attempting to reach safety in Europe. In 2016, people continue to make the hazardous journey across the sea, and at the beginning of February, 67,072 people made it across, while 357 were reported dead or missing.

Methods: Both collections focus on some of the most relevant medical conditions, as perceived by experts involved, either in...
