not speak. Blood-count five days later 5000 to the c.e. No brain-pressure symptoms. Speech suddenly returned without any effort. The author suggests that the mutism may have been due to pressure from meningeal accumulation on the cortex or to a haemorrhage occurring during a convulsion. He thinks it was more probably hysterical in origin. In the discussion which followed the reading of this paper it was suggested that the mutism was due to temporary loss of memory of words, the result of high fever.

Macleod Yearsley.

**THERAPEUTIC PREPARATIONS.**

**PARKE, DAVIS & CO., 111, Queen Victoria Street, London, E.C.**

**VEST POCKET INHALER.**—This little instrument, made of vulcanite, is greatly appreciated by reason of its simplicity and its portability and from the fact that it can be used without observation when held in the fist. Menthol-pine inhalant is used as the inhaler, and has been found most efficient for hoarseness, catarrh, etc. The instrument is equally adapted for such medicaments as eucalyptus oil, terebene, etc., which are used to saturate absorbent material through which air is drawn. After use the end pieces can be screwed down so as to prevent escape of fluid or odour. The outfit is inexpensive, easily manipulated, and unbreakable.

**ELIXIR HEROIN AND TERPIN HYDRATE.**—This preparation presents the marked sedative properties of heroin and the stimulating action of terpin hydrate. Each fluid ounce represents: heroin $\frac{1}{6}$ grain, terpin hydrate 8 grains. It is widely prescribed in acute and chronic bronchitis, pneumonia, pleurisy, asthma, laryngitis, and similar affections. It is a pleasant and effective expectorant, and exerts its soothing and toning influence without the drawbacks of opium or morphine. The dose is from 1 to 4 fluid drachms, swallowed slowly. It is supplied in bottles of 4, 8, 16, and 80 fluid ounces.

**ADRENALIN AND EUCAINE TABLETS.**—Each tablet contains $\frac{3}{2000}$ grain of adrenalin and $\frac{1}{6}$ grain of eucaine lactate, with $\frac{2}{3}$ grain of sodium chloride, sufficient to impart salinity to the solution. One tablet dissolved in 17 minims of sterile distilled water forms an analgesic and ischaemic agent for use in dental extractions and small operations, which will contain 1 per cent. of the eucaine salt and about 1 of adrenalin in 30,000 parts.

One tablet dissolved in 85 minims of sterile distilled water (approximately six tablets in one fluid ounce) forms a solution similar in strength to that used in operations at University College Hospital, as reported in the *Lancet*, July 25, 1903, and the *British Medical Journal*, December 24, 1904. The tablets are supplied in tubes of 25.

**THERMOFUGE.**—Thermofuge is a stiff paste which forms a substitute for poultices, compresses, and plasters, and is greatly superior in effectiveness, convenience, and cleanliness.

It is a compound of menthol, thymol, eucalyptus oil, ammonium iodide, etc., and provides an antiseptic emollient and derivative for external application for the reduction of internal and superficial inflammations of all kinds. Sore throat, laryngitis, pulmonary congestion, are effectively treated by a layer of Thermofuge (first made soft by heat) spread over the adjacent surface and covered with oiled silk. It is supplied in tins of $\frac{1}{4}$, $\frac{1}{2}$, 1, 5, and 10 lb.

Index.

THOMSON (StClair), prolapse of the ventricle of Morgagni  210
—— bilateral growth springing from a larynx  253
—— extensive tuberculous laryngitis  348
—— ethmoidal frontal cells shown in dissected skulls  349
—— multi-sinusitis, ethmoids removed from  351
—— laryngeal forceps  353
—— the use of adrenalin to define new growths and infiltrations  401
Throracic lympho-sarcoma (Jobson Horne)  218
Throat in chronic systemic infections, examination of (Dr. J. W. Goodale)  138
Thrombosis, infective sinus (Knapp)  88
—— of the sinus (Dr. Neumann)  469
Thyroid and trachea (Dhariart and Rozier)  142
TILLEY (Herbert), acute suppurative otitis media  23
—— chronic frontal sinus suppuration  60
—— papillomata removed from a larynx  254
—— submucous resection of septum  121
—— softening gumma of external surface of left ala nasi  356
Tinnitus, objective (C. Friedmann)  235
TOBEY (G. L., jun.), intra-nasal operation, fatal result from  363
—— technique of submucous resection of nasal septum  364
TOD (Hunter), primary tuberculosis of the left mastoid process  31
—— diseases of the ear  606
—— exceptionally good hearing after removal of the stapes  33
Tonsillar disease (C. A. B. Horsford)  119
Tonsils: extreme hypertrophy of the faucial and pharyngeal tonsils  329
—— the removal of enlarged (Roderick MacLaren)  225
Török (B. von) (Budapest), horizontal semicircular canal  476
Tracheo-bronchoscopy, reports of cases (Chevalier Jackson)  613
Tracheotomy for laryngeal obstruction (E. A. Peters)  177
—— late effects of (Martuscelli and Ciociolo)  657
Tropical Medicine, London School of, Seamen’s Hospital, Greenwich  426
Tubercle of the larynx (Mayo Collier)  157
Tubercular disease of the larynx (Dr. W. H. Kelson)  159
—— (true) tumours of the larynx and trachea (Dr. J. Nowland Mackenzie)  379
Tuberculoid disease of the left tonsil (Dr. Abercrombie)  185
—— pathological report on (Wyatt Wingrave)  186
Tuberculoma in the larynx (Dr. Andrew Wylie)  73
—— of the naso-pharynx, with report on same (Dr. P. H. Abercrombie)  70
Tuberculosis, differential diagnosis of (Sir Felix Semon)  549
—— (laryngeal) (Mayo Collier)  68
—— (Dupuy Homer)  364
—— (William E. Casselberry)  473
—— (nasal) (G. Cohn)  226
—— of accessory sinuses of the nose (Dr. J. W. Gleitsmann)  406
—— of the larynx (Castex)  159
—— (Charles Parker)  165
—— (primary) of the left mastoid process (Hunter Tod)  31
—— the channels of infection in (Dr. Jobson Horne)  281
Tuberculous laryngitis (M. Furet)  157
—— extensive (StClair Thomson)  348
Tumour of palate (W. H. Kelson)  115
—— of nasal septum (Furniss Potter)  124, 181
—— in soft palate (Stuart Low)  125
—— report on (Wyatt Wingrave)  127
Tumours: endotheliomata and other tumours of the neck (Wyatt Wingrave)  41
