CORRIGENDUM

Impulsivity, risk taking, and cortisol reactivity as a function of psychosocial stress and personality in adolescents—CORRIGENDUM

M. SIMA FINY, KONRAD BRESIN, DONNA L. KOROL, AND EDELYN VERONA

University of Illinois at Urbana–Champaign; and Syracuse University

doi:10.1017/S0954579414000212, published online by Cambridge University Press, 9 April 2014

Upon examination of the online published Table 1 in our original article, the authors decided to add an important column to clarify the meaning. We regret this oversight and any problems it may have caused.

Table 1. Study procedures and time points

<table>
<thead>
<tr>
<th>Group</th>
<th>T0 (Baseline)</th>
<th>Condition Manipulation</th>
<th>T1 (+15 min)</th>
<th>Impulsivity Task</th>
<th>T2 (+35 min)</th>
<th>Risk-Taking Task</th>
<th>T3 (+55 min)</th>
</tr>
</thead>
<tbody>
<tr>
<td>No-stress condition</td>
<td>MPQ-SF, VAS 1, saliva sample 1</td>
<td>Control reading task</td>
<td>VAS 2, saliva sample 2</td>
<td>GNG</td>
<td>VAS 3, saliva sample 3</td>
<td>BART-Y</td>
<td>VAS 4, saliva sample 4</td>
</tr>
<tr>
<td>Stress condition</td>
<td>MPQ-SF, VAS 1, saliva sample 1</td>
<td>Stress task (TSST-C)</td>
<td>VAS 2, saliva sample 2</td>
<td>GNG</td>
<td>VAS 3, saliva sample 3</td>
<td>BART-Y</td>
<td>VAS 4, saliva sample 4</td>
</tr>
</tbody>
</table>

Note: The laboratory experience was the same across both stress groups to make them comparable, with the exception of the psychosocial stressor. The VAS and saliva samples were taken in conjunction 20 min apart; thus, the time frame of mood assessments and cortisol collections was similar. T0, T1, T2, T3, Times 0–3, MPQ-SF, Multidimensional Personality Questionnaire—Simplified Wording Form; VAS, Visual Analog Scale; TSST-C, Trier Social Stress Test for Children; GNG, go/no-go; BART-Y, Balloon Analogue Risk Task—Youth Version.
