DWARF GALAXIES:
FROM THE DEEP UNIVERSE TO THE PRESENT
IAU SYMPOSIUM 344

COVER ILLUSTRATION:

Dwarf galaxies, whether lurking near more massive neighbors as shown here or more isolated, serve as laboratories for studying star formation, feedback processes, gas kinematics, and chemical enrichment, and act as probes of structure formation and cosmology at earlier epochs.

Design by IPAC Communications & Education Group.

Plenary Session

The Future of Dwarf Galaxy Research: What Telescopes Will Discover <i>Martha P. Haynes</i>	3
The Future of Dwarf Galaxy Research: What Simulations will Predict? <i>Laura V. Sales</i>	17

Local Group Dwarf Galaxies

Local Group Dwarf Galaxies <i>Andrew A. Cole</i>	29
The merger debris of dwarf galaxies in the local stellar halo <i>Cuihua Du, Hefan Li and Heidi Jo Newberg</i>	38
A wide angle chemical survey of the Sagittarius dwarf Spheroidal galaxy <i>L. Sbordone, L. Monaco, S. Duffau, P. Bonifacio and E. Caffau</i>	42

Poster Contributions

The hydrodynamic evolution of the gas content in the dSph galaxy Ursa Minor induced by the feedback from types Ia and II supernovae <i>Anderson Caproni, Gustavo A. Lanfranchi, Gabriel H. Campos Baião, Grzegorz Kowal and Diego Falceta-Gonçalves</i>	49
A near-infrared VISTA of the Small Magellanic Cloud <i>Maria-Rosa L. Cioni, Florian Niederhofer, Stefano Rubele and Ning-Chen Sun</i>	53
The massive stellar population of IC 10 <i>Luis J. Corral, Miriam García, Silvana G. Navarro and Artemio Herrero</i>	57
The major merger origin of the Andromeda II kinematics <i>Ivana Ebrova, Ewa L. Lokas, Sylvain Fouquet and Andres del Pino</i>	62
Morphology of stellar populations in the Magellanic Clouds using the VMC survey <i>Dalal El Youssoufi, Maria-Rosa L. Cioni, Cameron P. M. Bell, Stefano Rubele, Florian Niederhofer and Gal Matijevic</i>	66
Detection of AGB stars in the IC 10 dwarf irregular galaxy <i>Mahtab Gholami, Atefeh Javadi, Jacco Th. van Loon, Habib Khosroshahi, Mohammad Taghi Mirtorabi, Elham Saremi and Samaneh Eftekhari</i>	70
FOSSILs in the Galactic Halo <i>Carl J. Grillmair</i>	73
Recovering the Star Formation History of IC1613 Dwarf Galaxy Using Evolved Stars <i>Seyed Azim Hashemi, Atefeh Javadi and Jacco Th. van Loon</i>	77

Isolated dwarf galaxies in the Local Group	81
<i>Clare R. Higgs, Alan W. McConnachie and the Solo Collaboration</i>	
OGLE-ing the Magellanic System: Three-Dimensional Structure	86
<i>Anna M. Jacyszyn-Dobrzeńska and the OGLE Team</i>	
Star formation history and dynamical evolution of the solar neighbourhood	90
<i>Andreas Just, Reza Moetazedian and Evgeny Polyachenko</i>	
Subaru Hyper Suprime-Cam Survey for the Local Group Dwarf Galaxies: Ursa Minor	94
<i>Yutaka Komiyama</i>	
Origin of Hot Bubble in NGC 6822 Hubble V Star-Forming Region	96
<i>Hye-In Lee, Heeyoung Oh, Beomdu Lim, Huynh Anh N. Le, Sungho Lee, Gregory Mace, Daniel T. Jaffe, Ken'ichi Tatematsu, Sangwook Park and Soojong Pak</i>	
Bright-red stars in the dwarf irregular galaxy Leo A	99
<i>Alina Leščinskaitė, Rima Stonkutė and Vidas Vansevicius</i>	
Early chemical enrichment of the Milky Way dwarf satellites from high-resolution and NLTE analysis of VMP stars	103
<i>Lyudmila Mashonkina, Pascale Jablonka, Tatyana Sitnova, Yuri Pakhomov, Pierre North, Andrey Tatarsnikov, Marina Burlak and Olga Vozyakova</i>	
A numerical study on the distribution of the debris of the Milky Way satellites	105
<i>Matteo Mazzarini and Andreas Just</i>	
The Milky Way's total satellite population and constraining the mass of the warm dark matter particle	109
<i>Oliver Newton, Marius Cautun, Adrian Jenkins, Carlos S. Frenk and John C. Helly</i>	
Dwarf galaxies: evidence of differential tidal effects in the Large Magellanic Cloud	114
<i>Andrés E. Piatti and Dougal Mackey</i>	
Formation History of Binary Clusters in the Large Magellanic Cloud	118
<i>Rhorom Priyatikanto, Mochamad Ikbal Arifyanto, Rendy Darma, Aprilia and Muhamad Irfan Hakim</i>	
The Nature of the Triangulum-Andromeda Stellar Structures	122
<i>J. V. Sales Silva, H. Perottoni, K. Cunha, H. J. Rocha-Pinto, D. Souto and F. Almeida-Fernandes</i>	
The Local Group Dwarf Galaxies. The Star Formation Histories derived using the Long Period Variable Stars	125
<i>Elham Saremi, Atefeh Javadi, Jacco Th. van Loon, Habib Khosroshahi, Sara Rezaei kh, Roya Hamedani Golshan and Seyed A. Hashemi</i>	

VMC proper motions of the Magellanic Bridge	130
<i>Thomas Schmidt, Maria-Rosa Cioni, Florian Niederhofer, Jonathan Diaz, Gal Matijevic</i>	
Resonant Trapping of the Moving Groups G18-39 and G21-22 in the Galactic Halo	134
<i>W. J. Schuster, E. Moreno and J. G. Fernández-Trincado</i>	
Star clusters and young populations in the dwarf irregular galaxy Leo A	139
<i>Rima Stonkutė, Marius Čeponis, Alina Leščinskaitė and Vidas Vansevicius</i>	
Evidence for discrete star formation events in the Small Magellanic Cloud based on 6.5m Magellan Telescope observations	143
<i>A. Stranzalis, D. Hatzidimitriou, A. Zezas and V. Antoniou</i>	
An Analysis of M31 and its Satellite Galaxies Using RR Lyrae Variables	147
<i>Nahathai Tanakul and Ata Sarajedini</i>	

Metallicity, Massive Stars and Chemical Evolution

Massive star evolution: feedbacks in low-Z environment	153
<i>Sylvia Ekström, Georges Meynet, Cyril Georgy, José Groh, Arthur Choplin and Hanfeng Song</i>	
What do planetary nebulae and H II regions reveal about the chemical evolution of nearby dwarf galaxies?	161
<i>Denise R. Gonçalves</i>	
Synergies between Massive Stars and Metal-poor Dwarf Irregular Galaxies	178
<i>Miriam Garcia, Artemio Herrero, Francisco Najarro, Norberto Castro and Inés Camacho</i>	
Molecular Composition of Local Dwarf Galaxies: Astrochemistry in Low-metallicity Environments	182
<i>Yuri Nishimura, Takashi Shimonishi, Yoshimasa Watanabe, Nami Sakai, Yuri Aikawa, Akiko Kawamura, Kotaro Kohno and Satoshi Yamamoto</i>	
Star formation at low rates: impact of lacking massive stars on the evolution of dwarf galaxies	186
<i>P. Steyrleithner, G. Hensler, S. Recchi and S. Ploeckinger</i>	
Multiple Feedback in Low-Metallicity Massive Star Formation	190
<i>Kei E. I. Tanaka, Jonathan C. Tan, Yichen Zhang and Takashi Hosokawa</i>	

Poster Contributions

Enrichment of Heavy Elements in Chemo-Dynamical Simulations of Dwarf Galaxies	197
<i>Yutaka Hirai, Takayuki R. Saitoh, Shinya Wanajo and Michiko S. Fujii</i>	
The Lifecycle of Dust and Metals in Low-Abundance Galaxies	201
<i>Alec S. Hirschauer, Laurin Gray, William Paranzino, Margaret Meixner, Martha L. Boyer and Olivia C. Jones</i>

Preface

Dwarf galaxies have long served as excellent, individual laboratories for studying star formation, feedback processes, gas kinematics, and chemical enrichment in the local universe. As community interest in dwarfs has gained momentum, the study of dwarf galaxies has broadened to encompass larger questions themed around structure formation, stellar mass assembly, and the role environment plays in galaxy evolution. Now that cosmological simulations of structure formation are finally capable of resolving dwarf galaxies in increasingly larger cosmological volumes, the worlds of dwarf galaxy theory and observations are at a crossroads.

Our growing body of knowledge on dwarfs is diverse and stretches back to early cosmic times. For example, satellites at increasingly lower masses in the Local Group have placed limits on the effects of reionization. These dwarf galaxies are now not only seen as analogs to galaxies in the early universe, but they have become direct probes of the earliest epochs of star formation. Detailed studies of the cold interstellar medium in nearby galaxies made possible by Herschel and ALMA can now place constraints on the dust and molecular gas content of low mass galaxies. Low redshift studies have also begun to statistically populate the faint-end of the luminosity function, bridging the gap in the baryonic Tully-Fisher relation between dwarf spheroidals and irregulars but also revealing environmental variations. The expanding physical volume probed by current telescopes means the properties and histories of isolated dwarfs can be compared across environments ranging from dwarf galaxy associations, to dwarfs in groups, stellar streams, and directly interacting systems. The numbers of observed dwarfs can further be compared to cosmological simulations as direct tests of the Lambda Cold Dark Matter paradigm.

Burgeoning samples of extremely metal-poor star-forming dwarfs have opened new avenues of research on star formation in nearly pristine environments, creating tension with our current understanding of stellar feedback and the retention of baryons at low masses. We are on the threshold of observing and understanding the formation and lifecycle of massive stars in metal-poor environments that will connect star formation conditions locally with intermediate and high-redshift conditions that probe the physics of early generation stars. The upcoming progress in this area inspired by second generation high-multiplexing optical spectrographs, and the ideal laboratories provided by dwarf galaxies, made this a crucial time for bringing together the low metallicity, massive star and dwarf galaxy communities.

At the same time, advances in observational techniques have also moved us into the era of direct observations of dwarfs at high redshift, including studies of dwarf galaxies directly contributing to the reionization of the universe. For example, dwarf galaxies in the mass range of $10^7 - 10^8$ Msun are now being studied out to redshift 6; this is an area poised for significant growth. Such observational advances have been paralleled by large chemo- and hydro-dynamical simulations that are now resolving structures on dwarf galaxy mass-scales over critical cosmic timescales for galaxy evolution.

In this symposium, our goal was to integrate the current knowledge of dwarf galaxies across multiple distance scales and multiple communities, to build not only a consistent picture of low-mass systems across cosmic time but to also relate these observations to cosmological constraints from dwarf galaxy populations. The meeting incorporated (i) detailed studies of Local Group satellites, (ii) star formation, ISM content, feedback, gas kinematics, and chemical enrichment (or lack thereof) in nearby dwarfs, (iii) the interplay of the interstellar medium and massive stars hosted by low metallicity dwarf galaxies, (iv) the properties of dwarfs at high-redshift, (v) hydrodynamical simulations and cosmological models of low-mass structures.
