Table of Contents

Preface	x
Editors	xi
List of Participants	xii
Early structure formation in the THESAN radiation-magneto-hydrodynamics simulations	1
<i>E. Garaldi, R. Kannan, A. Smith, V. Springel, R. Pakmor, M. Vogelsberger and L. Hernquist</i>	
Simulations of dark matter with frequent self-interactions	8
<i>Moritz S. Fischer</i>	
Simulations of the reionization of the clumpy intergalactic medium with a novel particle-based two-moment radiative transfer scheme	15
<i>Tsang Keung Chan, Alejandro Benitez-Llambay, Tom Theuns and Carlos Frenk</i>	
Favoured Inflationary Models by SFC Baryogenesis	21
<i>Mariana Panayotova and Daniela Kirilova</i>	
The Effect of Non-Gaussian Primordial Perturbations on Large-Scale Structure	26
<i>G. A. Peña and G. N. Candalish</i>	
The complex evolution of supermassive black holes in cosmological simulations	33
<i>Peter H. Johansson, Matias Mannerkoski, Antti Rantala, Shihong Liao, Alexander Rawlings, Dimitrios Irodotou and Francesco Rizzato</i>	
Nature of star formation in first galaxies	39
<i>Mahavir Sharma</i>	
The formation of Supersonically Induced Gas Objects (SIGOs) with H ₂ cooling	45
<i>Yurina Nakazato, Gen Chiaki, Naoki Yoshida, Smadar Naoz, William Lake and Chiou Yeuo</i>	
An idealized setup for cosmological evolution of baryonic gas in isolated halos	51
<i>S. Dattathri and P. Sharma</i>	
Detecting cosmic filamentary network with stochastic Bisous model	54
<i>Moorits Mihkel Muru</i>	
Absorption spectra from galactic wind models: a framework to link PLUTO simulations to TRIDENT	56
<i>Benedetta Casavecchia, Wladimir E. Banda-Barragán, Marcus Brüggen and Fabrizio Brighenti</i>	

Hydrodynamic Simulations and Time-dependent Photoionization Modeling of Starburst-driven Superwinds	64
<i>A. Danehkar, M. S. Oey and W. J. Gray</i>	
Numerical modelling of X-shaped radio galaxies using back-flow model	70
<i>Gourab Giri and Bhargav Vaidya</i>	
Radiation Magnetohydrodynamic Simulations of Soft X-ray Emitting Regions in Active Galactic Nuclei	76
<i>Taichi Igarashi, Yoshiaki Kato, Hiroyuki R. Takahashi, Ken Ohsuga, Yosuke Matsumoto and Ryoji Matsumoto</i>	
Cold Gas in Outflow: Evidence for Delayed Positive AGN Feedback	82
<i>Yu Qiu</i>	
A New Code for Relativistic Hydrodynamics and its Application to FR II Radio Jets	87
<i>Jeongbin Seo, Hyesung Kang and Dongsu Ryu</i>	
Studying Magnetic Field Amplification in Interacting Galaxies Using Numerical Simulations	94
<i>Simon Selg and Wolfram Schmidt</i>	
X-ray spectral and image spatial models of NGC 3081 with <i>Chandra</i> data	100
<i>O.V. Kompaniets, Iu.V. Babyk, A.A. Vasylchenko, I.O. Izvieckova and I.B. Avilova</i>	
Simulating star formation in spiral galaxies	105
<i>Steven Rieder, Clare Dobbs, Thomas Bending, Kong You Liow and James Wurster</i>	
The CNN classification of galaxies by their image morphological peculiarities	111
<i>D. Dobrycheva, V. Khramtsov, M. Vasylchenko and I. Avilova</i>	
Velocity-space substructures and bar resonances in an <i>N</i> -body Milky Way	116
<i>Tetsuro Asano, Michiko S. Fujii, Junich Baba, Jeroen Bédorf, Elena Sellentin and Simon Portegies Zwart</i>	
Fate of escaping orbits in barred galaxies	122
<i>Debasish Mondal and Tanuka Chattopadhyay</i>	
Dynamical evolution modeling of the Collinder 135 & UBC 7 binary star cluster	128
<i>Marina Ishchenko, Peter Berczik and Nina Kharchenko</i>	
Multiparticle collision simulations of dense stellar systems and plasmas	134
<i>P. Di Cintio, M. Pasquato, L. Barbieri, H. Bufferand, L. Casetti, G. Ciraolo, U. N. di Carlo, P. Ghendrih, J. P. Gunn, S. Gupta, H. Kim, S. Lepri, R. Livi, A. Simon-Petit, A. A. Trani and S.-J. Yoon</i>	
A novel generative method for star clusters from hydro-dynamical simulations	141
<i>Stefano Torniamenti</i>	

Stellar Population Photometric Synthesis with AI of S-PLUS galaxies	148
<i>Vitor Cernic, for the S-PLUS collaboration</i>	
Clustering stellar pairs to detect extended stellar structures	150
<i>Sergey Sapozhnikov and Dana Kovaleva</i>	
Kinetic modeling of auroral events at solar and extrasolar planets	152
<i>Valery I. Shematovich and Dmitry V. Bisikalo</i>	
Stellar activity effects on the atmospheric escape of hot Jupiters	158
<i>Hiroto Mitani, Riohei Nakatani and Naoki Yoshida</i>	
Study of the non-thermal atmospheric loss for exoplanet π Men c	164
<i>Anastasia A. Avtaeva and Valery I. Shematovich</i>	
Multi-component MHD model for hydrogen-helium extended envelope of hot Jupiter	167
<i>Y.G. Gladysheva, A.G. Zhilkin and D.V. Bisikalo</i>	
Modeling Stellar Jitter for the Detection of Earth-Mass Exoplanets via Precision Radial Velocity Measurements	169
<i>Samuel Granovsky, Irina N. Kitiashvili and Alan A. Wray</i>	
Thermal atmospheric escape of close-in exoplanets	173
<i>Eugenia S. Kalinicheva and Valery I. Shematovich</i>	
Inference of Magnetic Fields and Space Weather Hazards of Rocky Extrasolar Planets From a Dynamical Geophysical Model	175
<i>Varnana M. Kumar, Thara N. Sathyan, T.E. Girish, P.E. Eapen, Biju Longhinos and J. Binoy</i>	
Hydrodynamical Simulations of Misaligned Accretion Discs in Binary Systems: Companions tear discs	177
<i>S. Doğan, C. J. Nixon, A. R. King, J. E. Pringle and D. Price</i>	
Hybrid magnetic structures around spinning black holes connected to a surrounding accretion disk	184
<i>I. El Mellah, B. Cerutti, B. Crinquand and K. Parfrey</i>	
Mass ejection from neutron-star mergers	190
<i>Masaru Shibata, Sho Fujibayashi, Kota Hayashi, Kenta Kiuchi and Shinya Wanajo</i>	
Merging of spinning binary black holes in globular clusters	203
<i>Margarita Sobolenko, Peter Berczik, Manuel Arca Sedda, Konrad Maliszewski, Mirek Giersz and Rainer Spurzem</i>	
Predicting the Expansion of Supernova Shells Using Deep Learning toward Highly Resolved Galaxy Simulations	209
<i>Keiya Hirashima, Kana Moriwaki, Michiko Fujii, Yutaka Hirai, Takayuki Saitoh and Junichiro Makino</i>	
Toward Realistic Models of Core Collapse Supernovae: A Brief Review	215
<i>Anthony Mezzacappa</i>	

Hot spot drift in synchronous and asynchronous polars: synthesis of light curves <i>Andrey Sobolev, Dmitry Bisikalo and Andrey Zhilkin</i>	228
The predictive power of numerical simulations to study accretion and outflow in T Tauri Stars <i>Ana I. Gómez de Castro</i>	234
Feedback from the Vicinity of Massive Protostars in the First Star Formation <i>Kazutaka Kimura</i>	246
A cloud-cloud collision in Sgr B2? 3D simulations meet SiO observations <i>Vladimir E. Banda-Barragán, Jairo Armijos-Abendaño and Helga Dénes</i>	250
Formation process of the Orion Nebula Cluster <i>Michiko S. Fujii, Long Wang, Takayuki R.Saitoh, Yutaka Hirai and Yoshito Shimajiri</i>	258
PION: Simulations of Wind-Blown Nebulae <i>Jonathan Mackey, Samuel Green, Maria Moutzouri, Thomas J. Haworth, Robert D. Kavanagh, Maggie Celeste, Robert Brose, Davit Zargaryan and Ciarán O'Rourke</i>	262
Infrared appearance of wind-blown bubbles around young massive stars <i>Maria S. Kirsanova and Yaroslav N. Pavlyuchenkov</i>	268
Numerical 2D MHD simulations of the collapse of magnetic rotating protostellar clouds with the Enlil code <i>Sergey Khaibrakhmanov, Sergey Zamozdra, Natalya Kargaltseva, Andrey Zhilkin and Alexander Dudorov</i>	273
Two-dimensional MHD model of gas flow dynamics near a young star with a jet and a protoplanetary disk <i>V. V. Grigoryev, D. V. Dmitriev and T. V. Demidova</i>	279
PRESTALINE: A package for analysis and simulation of star forming regions . . <i>G. Van Looveren, O. V. Kochina and D. S. Wiebe</i>	282
Episodic accretion onto a protostar <i>Tomoyuki Hanawa, Nami Sakai and Satoshi Yamamoto</i>	288
Photoevaporation of Protoplanetary Disks <i>Ayano Komaki, Riouhei Nakatani and Naoki Yoshida</i>	294
Modeling protoplanetary disk evolution in young star forming regions <i>Martijn J. C. Wilhelm, Simon Portegies Zwart, Claude Cournoyer-Cloutier, Sean Lewis, Brooke Polak, Aaron Tran, Mordecai-Mark Mac Low and Stephen L. W. McMillan</i>	300
Long-Term Evolution of Convectively Unstable Disk <i>Lomara Maksimova and Yaroslav Pavlyuchenkov</i>	306
Heliosphere in the Local Interstellar Medium <i>Nikolai V. Pogorelov</i>	309

3D Realistic Modeling of Solar-Type Stars to Characterize the Stellar Jitter	324
<i>Irina Kitiashvili, Samuel Granovsky and Alan Wray</i>	
Dynamic complexity based analysis on the relationship between solar activity and cosmic ray intensity	330
<i>Vipindas V., Sumesh Gopinath, Vinod Kumar R. and Girish T.E.</i>	
Advances and Challenges in Observations and Modeling of the Global-Sun Dynamics and Dynamo	333
<i>Alexander Kosovichev, Gustavo Guerrero, Andrey Stejko, Valery Pipin and Alexander Getling</i>	
From evolved Long-Period-Variable stars to the evolution of M31	353
<i>Maryam Torki, Mahdieh Navabi, Atefeh Javadi, Elham Saremi, Jacco Th. van Loon and Sepideh Ghaziasgar</i>	
Applicability of the Bulirsch-Stoer algorithm in the circular restricted three-body problem	356
<i>Tatiana Demidova</i>	
A radiation hydrodynamics scheme on adaptive meshes using the Variable Eddington Tensor (VET) closure	358
<i>Shyam H. Menon, Christoph Federrath, Mark R. Krumholz, Rolf Kuiper, Benjamin D. Wibking and Manuel Jung</i>	
Interplay of various particle acceleration processes in astrophysical environment	365
<i>Sayan Kundu and Bhargav Vaidya</i>	
GP-MOOD: a positivity-preserving high-order finite volume method for hyperbolic conservation laws	373
<i>Dongwook Lee and Rémi Bourgeois</i>	
Converting sink particles to stars in hydrodynamical simulations	380
<i>Kong You Liow, Steven Rieder, Clare Dobbs and Sarah Jaffa</i>	
Modelling astrophysical fluids with particles	382
<i>Stephan Rosswog</i>	
Detecting vortices in fluid dynamics simulations using computer vision	398
<i>Thomas Rometsch</i>	
Modeling gravitational few-body problems with TSUNAMI and OKINAMI	404
<i>Alessandro A. Trani and Mario Spera</i>	
Plasmoid Dominated Magnetic Reconnection and Particle Acceleration	410
<i>Arghyadeep Paul, Sirsha Nandy and Bhargav Vaidya</i>	
Author Index	417

Preface

This special volume includes contributions from the IAUS 362 Symposium, The Predictive Power of Computational Astrophysics as a Discovery Tool. Computational astrophysics indeed rapidly becomes an indispensable tool for data-handling and making scientific discoveries in astronomy. A spectacular example is the precise calculation of gravitational wave forms coupled with sophisticated algorithms for signal analysis, together enabling a reliable gravitational wave detection. The main objective of this Symposium was to capitalize on these and other exciting advances. Our intention was to bring together both top scientists and students in a broad variety of research fields to summarize major achievements and outstanding challenges from theory and observations.

The initial plan was to hold a meeting in France, in June 2020. For obvious reasons we first had to postpone the Symposium until 2021, and then we decided to make it a fully online event in November 2021. Still, this has not prevented us from having a diverse and fruitful meeting. We have considered various options for organizing this event, including available commercial solutions, and finally decided that a professional Zoom account (kindly provided by the IAU) in combination with a dedicated Slack working space would fit all our needs. That proved to be a viable solution. We also offered a WonderMe space for private discussions.

The list of registered participants is just over 200 and consists of representatives from 35 countries, with two most significant delegations from the USA and Russia. While online meetings do have some disadvantages, the total participant number far exceeds the number of participants that had registered for the initial dates. Online format has allowed the Symposium to be attended by people from underrepresented countries, which would otherwise have not been able to participate.

The scientific program of the Symposium was quite extended with 17 invited talks, 95 contributed talks, and 23 posters, and consisted of whole-day sessions. As we had to take time zones into account, it was impossible to organize truly topical sessions, but we still succeeded in keeping some subject organization, while respecting speakers' comfort. Two technical support teams from Japan and Russia provided Zoom and Slack functioning, distribution of links, time keeping etc.

Overall, the symposium was very inspiring and, hopefully, useful. All the presented talks were quite informative. Of course, some of them raised lots of questions, but it is a normal situation in science, and it does not mean that they are not interesting. The symposium participants were of very different levels, from students to a Nobel prize winner. The range of topics was also very broad, therefore the SOC spent a lot of time trying to combine wideness and deepness. Finally, we managed to reach a good combination of reviews and contributed talks that gave us both an extensive introduction to main topics and the highest level of specific studies.

We wish to express our gratitude to Edouard Audit and his team at CEA for setting up the registration desk and handling the bookings. The Symposium would have been impossible without technical and financial assistance of the University of Tokyo and the Institute of Astronomy of the Russian Academy of Sciences.
