

TROPICAL AGRICULTURE

THE JOURNAL OF THE FACULTY OF AGRICULTURE
(IMPERIAL COLLEGE OF TROPICAL AGRICULTURE)
UNIVERSITY OF THE WEST INDIES

Volume 56

Number 1

January 1979

Agricultural credit related to nutrition and national development in the Caribbean:
a study of the Guyana Agricultural Cooperative Development Bank
Omawale and A. M. Rodrigues

Tillering and early growth of sugar-cane setts in response to pre-plant treatment
with (2-chloroethyl) phosphonic acid
D. Eastwood

Effect of daylength and gibberellic acid on the growth and promotion of flowering
in tannia (*Xanthosoma sagittifolium*)
C. R. McDavid and S. Alamu

Influence of applied copper and other micronutrients on groundnut (*Arachis
hypogaea*) and sorghum (*Sorghum bicolor*) on Malaysian oligotrophic peat
W. Y. Chew, K. T. Joseph and K. Ramli

Identification of resistance to southern bean mosaic virus in cowpea
J. L. Ladipo and D. J. Allen

Storage problems in the cush-cush yam. I—Post-harvest decay
P. Ricci, J. P. Torregrossa and R. Arnolin

Transmission of *Mucor* rot of guava fruits by three species of fruit flies
P. J. Ito, R. Kunimoto and W. H. Ko

A study of soil aluminium extraction methods in relation to plant aluminium and
yield in tropical soils
R. A. Khalid and J. A. Silva

Phosphorus fertilizers in Nigerian savanna soils. II—Evaluation of three phosphate
sources applied to maize at Samaru
U. Mokwunye

Effect of initial feedlot weight on the finishing performance and body composition
of Western Sudan Baggara cattle
E. S. E. Gaili and H. F. Osman

Sodium hydroxide treatment of rice straw to improve its nutritive value for
ruminants
M. C. N. Jayasuriya

Leaf variants in pigeon pea, *Cajanus cajan* (L.) Millsp.
A. N. Murthi and L. J. G. van der Maesen

Annual subscription: £27 (U.K. and overseas)

Title. The development of automatic bibliographic methods, based on indexing the significant words in the title, make it essential that the title of each paper should contain the maximum of useful information. It is particularly important, for example, that the title should contain references, where relevant, to the crop, the character of the investigation, the factors under review, and the climatic or geographic area in which the work was done.

Headings. The following details should be given at the head of the first sheet: the full title of the paper; a short title for running headlines, not exceeding 48 characters, counting each letter and space as one character; the name(s) of the author(s); the address at which the work was carried out; the present address(es) of author(s), if different from the previous item; and the address(es) to which proofs should be sent (see under 'Proofs' below).

Summary. A short but accurate and informative summary must be included, *not longer than ten lines of typescript*. The preparation of the summary, which requires much care, is not an Editorial responsibility.

Experimentation. This journal specialises in the presentation of data based on up-to-date methods of field experimentation. It is therefore important, where appropriate, that papers should include: an adequate account of experimental lay-outs; a description of treatments and general management; and assessments of experimental variability (e.g. coefficient of variation) and of the statistical significance of the results, specifying the methods used for the analysis (but without showing any details of the calculations). Papers can rarely be accepted if the work was carried out in containers, and/or under glasshouse conditions, unless it forms part of an investigation on field problems. The journal does not normally publish accounts of straightforward trials of pesticides, herbicides or varieties, since such papers are usually of local interest only.

Plates. Illustrations are welcome if they contribute to an understanding of the paper, but will only be accepted if of high quality. Photographs should be provided as unmounted glossy black-and-white prints (colour prints, but not colour transparencies, are acceptable for reproduction in black-and-white; they can only be reproduced in colour if a financial subsidy is provided). If lettering is to be inserted on a print, this should be shown on a spare copy or an overlay, and an unmarked print should be provided for marking by the printer.

Diagrams. Diagrams, including lettering, should be drawn in Indian ink on white drawing paper. Each illustration should bear the name of the author(s) and the figure number, written clearly in the margin or on the back. *On no account should diagrams be submitted on sheets larger than foolscap size.*

Legends. The legends for all illustrations should be given on a separate sheet of paper, clearly marked with the number of each plate or diagram. The ideal position for each diagram should be marked in the text, although it may not be possible to put the illustration exactly in that place. Plates will normally be bound immediately after the end of the paper.

Dating the work. Dates should be given for the beginning event of each experiment. *The journal is reluctant to accept papers submitted more than three years after the end of the relevant experimental work.*

Tables. Each table should be typed on a separate sheet of paper, and its preferred position indicated on the typescript. Each table should be numbered and bear an appropriate title, along the lines normally used for tables in this publication. Contributors are specially asked to avoid presenting tables that are too large to print across the page, hence the limit of 80 typewriter characters referred to earlier.

Use of metric units. All data must be presented in metric units, preferably SI units. Comparable data in local units (e.g. acres, ounces, etc.) may be given in parentheses at the first mention, if authors wish, or factors for converting metric into local units may be given as footnotes. The use of SI units will probably become mandatory at some time in the future.

References. The Harvard system of citation is used throughout as follows: name and initial(s) of author(s); year of publication in parentheses, further distinguished by the addition of small letters a, b, c, etc., where there are citations to more than one paper published by the same author(s) in one year; contracted title of periodicals as given in the World List of Scientific Periodicals; volume number in arabic figures; number of the first page of the paper. In the text, references should be denoted by giving the name of the author(s) with the date of publication in parentheses, e.g. Brown (1937) . . . (Brown, 1937), (Brown, 1927a; Jones and Smith, 1942a, b; Smith *et al.*, 1950). In the list of references all authors' names should be given. **Not more than fifteen papers should normally be cited.**

Referees. All manuscripts are critically reviewed by expert referees, on whose advice the Editor accepts or rejects contributions, or returns them to authors for reconsideration.

Proofs. Two sets of single-sided page proofs will be sent to each author, but it is the responsibility of the senior author to collate the views of his co-author(s) and submit a consolidated set of corrections to the Editor, by returning to him the printer's marked proof (identified by the words 'marked copy') with all required corrections. No further corrected proof will be sent to the author(s), unless this is specially requested. Excessive alterations, other than corrections of printer's errors, may be disallowed or charged to the author.

Offprints. Fifty offprints will be sent free of charge to the author. Where there are two or more authors, all fifty offprints will be sent to the senior author, unless the printer is asked to divide them. Additional offprints may be ordered on the form sent out with the proofs (to the senior author only if there is more than one) provided this is returned to the printer within seven days of its receipt by the author.

Return of manuscript. Where a submission is not accepted for publication the top copy will be returned; manuscripts on thin (air-mail) paper will usually be sent by air but bulky manuscripts from overseas may be returned by surface mail.

EXPERIMENTAL AGRICULTURE
VOLUME 15, NUMBER 2, APRIL 1979

CONTENTS

R. L. Villareal, S. K. Lin, L. S. Chang and S. H. Lai: Use of Sweet Potato (<i>Ipomoea batatas</i>) Leaf Tips as Vegetables. I. Evaluation of Morphological Traits	113
R. L. Villareal, S. C. S. Tsou, S. K. Lin and S. C. Chiu: Use of Sweet Potato (<i>Ipomoea batatas</i>) Leaf Tips as Vegetables. II. Evaluation of Yield and Nutritive Quality	117
R. L. Villareal, S. C. Tsou, S. C. Chiu and S. H. Lai: Use of Sweet Potato (<i>Ipomoea batatas</i>) Leaf Tips as Vegetables. III. Organoleptic Evaluation	123
S. S. Prihar, Ranjodh Singh, Nathu Singh and K. S. Sandhu: Effects of Mulching Previous Crops or Fallow on Dryland Maize and Wheat	129
R. H. Booth and M. N. Dhiauddin: Storage of Fresh Cassava (<i>Manihot esculenta</i>). III. Preserving Chipped Roots Before and During Sun-drying	135
Bruce L. Parker and Robert H. Booth: Storage of Cassava Chips (<i>Manihot esculenta</i>). Insect Infestation and Damage	145
J. B. Abington and T. W. Tanton: Effects of Variety, Fertilizer and Environment on Fire-cured Tobacco in Malawi	153
P. J. Gregory and G. R. Squire: Irrigation Effects on Roots and Shoots of Pearl Millet (<i>Pennisetum typhoides</i>)	161
Gajendra Giri and Rajat De: Effect of Preceding Grain Legumes on Dryland Pearl Millet in NW India	169
T. J. Johnson: Effects of Potassium on Buoyancy of Banana Fruit	173
