Printed in the United Kingdom

Papers to appear in forthcoming issues

Adler, R. L., Nowicki, T., Świrszcz, G. and Tresser, C.	Convex dynamics with constant input
Akin, E., Glasner, E., Huang, W., Shao, S. and Ye, X.	Sufficient conditions under which a transitive system is chaotic
Aliste Prieto, J.	Translation numbers for a class of maps on the dynamical systems arising from quasicrystals in the real line
Ashwin, P. and Goetz, A.	Cone exchange transformations and boundedness of orbits
Austin, T.	On the norm convergence of non-conventional ergodic averages
Badea, C., Grivaux, S. and Müller, V.	Epsilon-hypercyclic operators
Bakhtin, V. I.	On t-entropy and variational principle for the spectral radius of weighted shift operators
Baladi, V. and Smania, D.	Alternative proofs of linear response for piecewise expanding unimodal maps
Banyaga, A. and Hurtubise, D. E.	The Morse–Bott inequalities via a dynamical systems approach
Barge, M., Diamond, B., Hunton, J. and Sadun, L.	Cohomology of substitution tiling spaces
Barwell, A., Good, C., Knight, R. and Raines, B. E.	A characterization of ω-limit sets in shift spaces
Bautista, S. and Morales, C.	A sectional-Anosov connecting lemma
Bayart, F., Costakis, G. and Hadjiloucas, D.	Topologically transitive skew-products of operators
Begun, B. and del Junco, A.	Partitions with independent iterates in random dynamical systems
Bezuglyi, S., Kwiatkowski, J., Medynets, K. and Solomyak, B.	Invariant measures on stationary Bratteli diagrams
Blokh, A., Buff, X., Chéritat, A. and Oversteegen, L.	The solar Julia sets of basic quadratic Cremer polynomials
Bonatti, Ch., Gómez-Mont, X. and Vila-Freyer, R.	Statistical behaviour of the leaves of Riccati foliations
Bourgain, J., Lindenstrauss, E., Michel, P. and Venkatesh, A.	Some effective results for $\times a \times b$
Bowen, L.	Invariant measures on the space of horofunctions of a word hyperbolic group
Bowen, L.	Non-abelian free group actions: Markov processes, the Abramov–Rohlin formula and Yuzvinskii's formula

https://doi.org/10.1017/S0143385709000893 Published online by Cambridge University Press

Bressaud, X., Durand, F. and Maass, A.	On the eigenvalues of finite rank Bratteli–Vershik dynamical systems
Bressaud, X., Hubert, P. and Maass, A.	Persistence of wandering intervals in self-similar affine interval exchange transformations
Breuillard, E.	Equidistribution of dense subgroups on nilpotent Lie groups
Bruin, H., Demers, M. and Melbourne, I.	Existence and convergence properties of physical measures for certain dynamical systems with holes
Buzzi, J.	Maximal entropy measures for piecewise affine surface homeomorphisms
Calegari, D. and Fujiwara, K.	Combable functions, quasimorphisms, and the central limit theorem
Calta, K. and Wortman, K.	On unipotent flows in $\mathcal{H}(1, 1)$
Carvalho, A. N., Langa, J. A. and Robinson, J. C.	Lower semicontinuity of attractors for non-autonomous dynamical systems
Cornea, O., de Rezende, K. A. and da Silveira, M. R.	Spectral sequences in Conley's theory
Cuny, C.	The a.s. convergence of the one-sided ergodic Hilbert transform
de la Llave, R. and Windsor, A.	Livšic theorems for non-commutative groups including diffeomorphism groups and results on the existence of conformal structures for Anosov systems
Demers, M. F.	Functional norms for Young towers
Ding, F., Pan, J., Wang, S. and Yao, J.	Only rational homology spheres admit $\Omega(f)$ to be union of DE attractors
Dooley, A. H. and Golodets, V. Ya.	The geometric dimension of an equivalence relation and finite extensions of countable groups
Durieu, O. and Volný, D.	On sums of indicator functions in dynamical systems
Dutkay, D. E., Jorgensen, P. E. T. and Picioroaga, G.	Unitary representations of wavelet groups and encoding of iterated function systems in solenoids
Einsiedler, M. and Fish, A.	Rigidity of measures invariant under the action of a multiplicative semigroup of polynomial growth on $\mathbb{T}$
Elekes, M., Keleti, T. and Máthé, A.	Self-similar and self-affine sets; measure of the intersection of two copies
Eroğlu, K. I., Rohde, S. and Solomyak, B.	Quasisymmetric conjugacy between quadratic dynamics and iterated function systems
Frantzikinakis, N., Johnson, M., Lesigne, E. and Wierdl, M.	Powers of sequences and convergence of ergodic averages
Froyland, G., Lloyd, S. and Quas, A.	Coherent structures and isolated spectrum for Perron–Frobenius cocycles
Fujino, M.	C^*-algebras arising from substitutions
Galatolo, S. and Pacifico, M. J.	Lorenz like flows: exponential decay of correlations for the Poincaré map, logarithm law, quantitative recurrence
Gentile, G.	Quasi-periodic motions in strongly dissipative forced systems
Gogolev, A.	On diffeomorphisms Hölder conjugate to Anosov ones
Guilloux, A.	A brief remark on orbits of $\mathrm{SL}(2, \mathbb{Z})$ in the euclidean plane

https://doi.org/10.1017/S0143385709000893 Published online by Cambridge University Press

Gupta, C.	Extreme value distributions for some classes of non-uniformly partially hyperbolic dynamical systems
Hayashi, S.	An extension of the ergodic closing lemma
Hochman, M.	On the automorphism groups of multidimensional shifts of finite type
Host, B. and Kra, B.	Nil–Bohr sets of integers
Huang, W., Ye, X. and Zhang, G.	Lowering topological entropy over subsets
Iommi, G.	Multifractal analysis of Lyapunov exponent for the backward continued fraction map
Ito, H.	Birkhoff normalization and superintegrability of Hamiltonian systems
Jenkinson, O. and Steel, J.	Majorization of invariant measures for orientation-reversing maps
Ji, L. and Weber, A.	Dynamics of the heat semigroup on symmetric spaces
Jiang, Y. and Ye, Y.-L.	Ruelle operator theorem for non-expansive systems
Jitomirskaya, S. Koslover, D. A. and Schulteis, M. S.	Continuity of the Lyapunov exponent for analytic quasiperiodic cocycles
Julien, A.	Complexity and cohomology for cut-and-projection tilings
Kamae, T.	Mixing properties of numeration systems coming from weighted substitutions
Kennedy, J., Raines, B. E. and Stockman, D. R.	Basins of measures on inverse limit spaces for the induced homeomorphism
Kittrell, J. and Tsankov, T.	Topological properties of full groups
Koch, H. and Kocić, S.	A renormalization group approach to quasiperiodic motion with Brjuno frequencies
Kohlenbach, U. and Leuştean, L.	A quantitative mean ergodic theorem for uniformly convex Banach spaces
Larsen, N. S.	Crossed products by abelian semigroups via transfer operators
Leibman, A.	Multiple polynomial correlation sequences and nilsequences
Leplaideur, R. and Rios, I.	On t-conformal measures and Hausdorff dimension for a family of non-uniformly hyperbolic horseshoes
Levin, G. and Świątek, G.	Measure of the Julia set of the Feigenbaum map with infinite criticality
Li, S. and Shen, W.	An improved real C^k Koebe principle
Liu, C.	Strong bounded operators for ergodic averages and Lebesgue derivatives
Llibre, J. and Valls, C.	Analytic integrability of quadratic–linear polynomial differential systems
Lohrmann, P.	Normalisation holomorphe de structures de Poisson
Los, J.	Infinite sequence of fixed point free pseudo-Anosov homeomorphisms
Łuczak, A.	The eigenvectors of semigroups of positive maps on von Neumann algebras
Markarian, R., Pujals, E. and Sambarino, M.	Pinball billiards with dominated splitting

https://doi.org/10.1017/S0143385709000893 Published online by Cambridge University Press

Miles, R.	Finitely represented closed-orbit subdynamics for commuting automorphisms
Nayak, T. and Prasad, M. G. P.	Iteration of certain meromorphic functions with unbounded singular values
Nogueira, A.	Lattice orbit distribution on $\mathbb{R}^2$
Olivier, E.	Uniqueness of the measure with full dimension on sofic affine-invariant subsets of the 2-torus
Osipenko, G.	Symbolic image and invariant measures of dynamical systems
Patrão, M.	Entropy and its variational principle for noncompact metric spaces
Pikuła, R.	Enveloping semigroups of unipotent affine transformations of the torus
Pivato, M. and Yassawi, R.	Embedding Bratteli–Vershik systems in cellular automata
Pries, C.	Equicontinuous geodesic flows
Qiao, J., Yin, Y. and Gao, J.	Feigenbaum Julia sets of singularities of free energy
Quas, A. and Wierdl, M.	Rates of divergence of non-conventional ergodic averages
Raja, C. R. E.	On the existence of ergodic automorphisms in ergodic $\mathbb{Z}^d$-actions on compact groups
Rayskin, V.	Theorem of Sternberg–Chen modulo the central manifold for Banach spaces
Rechtman, A.	Existence of periodic orbits for geodesible vector fields on closed 3-manifolds
Rees, M.	Multiple equivalent matings with the aeroplane polynomial
Rempe, L.	The escaping set of the exponential
Roesch, P.	Cubic polynomials with a parabolic point
Sadovskaya, V.	Dimensional characteristics of invariant measures for circle diffeomorphisms
San Martin, L. A. B. and Seco, L.	Morse and Lyapunov spectra and dynamics on flag bundles
Sumi, H. and Urbański, M.	Real analyticity of Hausdorff dimension for expanding rational semigroups
Sun, P.	Zero entropy invariant measures for skew product diffeomorphisms
Thomsen, K.	The homoclinic and heteroclinic C^*-algebras of a generalized one-dimensional solenoid
Wang, X. and Zhang, G.	Constructing ergodic exponential maps with dense post-singular orbits
Yarmola, T.	Degenerate random perturbations of Anosov diffeomorphisms
Yokoyama, T.	Fixed points of certain Anosov maps on Riemannian manifolds

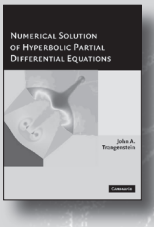
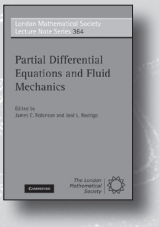
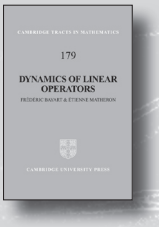
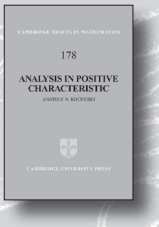
CAMBRIDGE

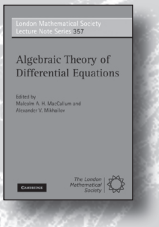
Great New Titles from Cambridge!











Numerical Solution of Hyperbolic Partial Differential Equations
John A. Trangenstein
$75.00: Hb: 978-0-521-87727-5: 616 pp.

Partial Differential Equations and Fluid Mechanics
Edited by James C. Robinson and José L. Rodrigo
London Mathematical Society Lecture Note Series
$60.00: Pb: 978-0-521-12512-3: 270 pp.

Dynamics of Linear Operators
Frédéric Bayart and Étienne Matheron
Cambridge Tracts in Mathematics
$80.00: Hb: 978-0-521-51496-5: 352 pp.

Analysis in Positive Characteristic
Anatoly N. Kochubei
Cambridge Tracts in Mathematics
$70.00: Hb: 978-0-521-50977-0: 220 pp.

Algebraic Theory of Differential Equations
Edited by Malcolm A. H. MacCallum and Alexander V. Mikhailov
London Mathematical Society Lecture Note Series
$72.00: Pb: 978-0-521-72008-3: 248 pp.

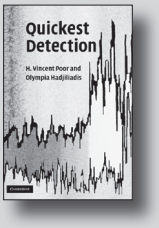
Quickest Detection
H. Vincent Poor and Olympia Hadjiliadis
$81.00: Hb: 978-0-521-62104-5: 244 pp.

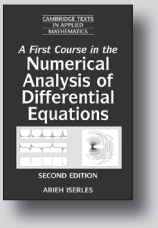
A First Course in the Numerical Analysis of Differential Equations 2nd Edition
Arieh Iserles
Cambridge Texts in Applied Mathematics
$53.99: Pb: 978-0-521-73490-5: 480 pp.

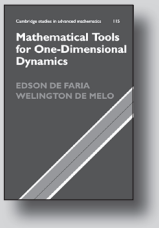
Mathematical Tools for One-Dimensional Dynamics
Edson de Faria and Welington de Melo
Cambridge Studies in Advanced Mathematics
$63.00: Hb: 978-0-521-88861-5: 208 pp.

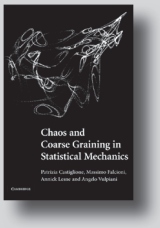
Chaos and Coarse Graining in Statistical Mechanics
Patrizia Castiglione, Massimo Falcioni, Annick Lesne, and Angelo Vulpiani
$117.00: Hb: 978-0-521-89593-4: 280 pp.

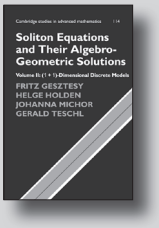
Soliton Equations and Their Algebro-Geometric Solutions
Volume 2: (1+1)-Dimensional Discrete Models
Fritz Gesztesy, Helge Holden, Johanna Michor, and Gerald Teschl
Cambridge Studies in Advanced Mathematics
$135.00: Hb: 978-0-521-75308-1: 448 pp.











Prices subject to change.

Editor-in-Chief
Michael Harris, Institut de Mathematiques de Jussieu, France

The *Journal of the Institute of Mathematics of Jussieu* covers all domains in pure mathematics. It includes important research articles from areas such as operator algebra, number theory, algebraic and Lie groups, differential and symplectic geometry, partial differential equations, Banach spaces, potential theory, mathematical physics, and probability. The internataional editorial board naturally draws upon the broad expertise of the highly prestigious Jussieu Mathematical Institute in Paris.

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of typescripts

Two copies of the manuscript should be submitted to an executive or managing editor whose interest is closest to the material of their article. In case of doubt authors may send manuscripts to the Managing Editors at the University of Warwick. A paper may also be submitted electronically in postscript form as an attachment to an email, i.e. not in the body of an email. Please also send the TEX file. If you are unable to do this, please submit the manuscript in printed form. The editor in charge of the paper will acknowledge receipt of the paper. **It is important that authors inform the editor of any changes of postal and/or e.mail address** while their paper is under consideration.

The editor will send the manuscript to the referee electronically, if possible, and also airmail a copy to him/her. However, the editor can decide if the material is inappropriate for the journal and will also make the final decision regarding acceptance or rejection. Should you need further information you should communicate in the first instance with the editor in charge of your paper. In an attempt to decrease the journal's backlog an editor may decline a submission (without using the normal refereeing process) if he/she considers that a 'reasonable' referee might not recommend the paper sufficiently strongly, or (possibly) if the paper is more than 30 pages long. Such summary action, with its inherent risk of unfairness, seems preferable to introducing a moratorium (the only other alternative) and has the advantage that delayed negative decisions might be avoided. This policy will be reviewed at a later date.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in LATEX using the ETDS LATEX class file. Papers that use this class file will be processed more efficiently. A LATEX2e file etds.cls is available via anonymous ftp from the Cambridge University Press site at ftp.cup.cam.ac.uk in the directory /pub/texarchive/journals/latex/etds-cls/. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use "article" style.

On final acceptance of a paper, authors should send the LATEX source code on disc including the figures (line figures only) and all author-defined macro and style files, to the Managing Editors, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TEX code presents problems in production.

Typescript

Papers should be typed, double-spaced, on one side only and with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

Notation

It is important that mathematician's expressions are clear to a printer (who is not a mathematician). For instance, n_k (n sub k) is common usage, but avoid if possible using c sub n sub k. Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin\theta/(1+y^2)\}$ should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced type is shown by wavy underlining.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o, O, o, O, 0; x, X, $\times$; ϕ, Φ, $\varnothing$; l, 1; ε, $\in$; κ, k.

There is no need to underline Greek or script letters provided these are clearly typed. Any special symbols should be explained on a separate sheet of directions for the printer.

If an author wishes to mark the end of the proof of a theorem, the sign □ may be used.

Footnotes should be avoided.

Diagrams

Figures and drawings should be on separate sheets in black ink or produced by computer to comparable quality. Photocopies are acceptable only if they are as clear as the originals. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript. The author's name in pencil must be on all separate sheets of diagrams. Figures should be used sparingly and only when they greatly clarify the exposition.

Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews:*

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one set of proofs for correction. If excessive alterations to the original manuscript are requested after the paper has been typeset, the author will be charged the cost of resetting. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. **It is important that proofs are corrected and returned promptly.**

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.
