What’s New in Logic Programming

Appalachian Set Theory
2006–2012
Edited by James Cummings and Ernest Schimmerling
Papers based on a series of workshops where prominent researchers present exciting developments in set theory to a broad audience.
London Mathematical Society Lecture Note Series

Logicism and its Philosophical Legacy
William Demopoulos
These essays apply the core conceptual innovation underlying Frege’s theory of number to the general analysis of theoretical knowledge.

Coherence in Three-Dimensional Category Theory
Nick Gurski
Serves as an introduction to higher categories as well as a reference point for many key concepts in the field.
Cambridge Tracts in Mathematics
$70.00: Hb: 978-1-107-03489-1: 286 pp.

Formal Languages in Logic
A Philosophical and Cognitive Analysis
Catarina Dutilh Novaes
“What does formalisation do for us? Here is an author who dares to attempt answers right across the disciplines of logic and philosophy and their histories, as well as cognitive science. She may set out from logic and mathematics, but what she has to say is relevant to anyone who has ever wondered about natural language as the originating formalisation.”
–Keith Stenning, University of Edinburgh
$95.00: Hb: 978-1-107-02091-7: 282 pp.

Practical Foundations for Programming Languages
Robert Harper
In this innovative book, Professor Robert Harper offers a fresh perspective on the fundamentals of programming languages through the use of type theory. Whereas most textbooks on this subject emphasize taxonomy, Harper instead emphasizes genetics, examining the building blocks from which all programming languages are constructed. The result is an introduction to programming theory that is both accessible and practical.
$75.00: Hb: 978-1-107-02957-6: 487 pp.

Systematic Program Design
From Clarity to Efficiency
Yanhong Annie Liu
Describes a systematic program design method, starting with specifications of computations and deriving implementations by step-wise program analysis and transformations.

Prices subject to change.

Aims and scope

Theory and Practice of Logic Programming is an international journal that publishes refereed papers covering both the theory and the practice of logic programming. Among the topics covered are AI applications that use logic programming, logic programming methodologies, specification, analysis and verification of systems, inductive logic programming, multi-relational data mining, natural language processing, knowledge representation, nonmonotonic reasoning, semantic web reasoning, databases, implementations and architectures and constraint logic programming.

TPLP is the sole official journal of the Association for Logic Programming (http://logicprogramming.org/) and is offered to its members at a preferential rate. It is also endorsed by SPARC, the Scholarly Publishing & Academic Resources Coalition (http://www.sparc.arl.org/).

Submission of manuscripts

Electronic submissions: The preferred form of submission is to send two email messages, the first one with the information containing the title, the author(s), and the abstract of the submission, and the second one with a PDF or a Postscript file. Both emails should be sent to the appropriate Area Editor, the Editor-in-Chief, and the corresponding email address of the senior author, with a PDF or Postscript file. The first email should also include a copy to the Editor-in-Chief. Full versions of important conference papers are welcomed. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to Cambridge University Press.

Book Reviews

Books for review, or suggestions for reviews, should be sent to the book reviews editor.

References

Supply these as eps files as the publisher cannot use original .tex files. A bibliography must be supplied of all illustrations.

Proofreading

Be sure to submit papers in their final form. Typographical and factual errors only may be changed at proof stage. The publisher reserves the right to change authors for extensive changes to their paper. No page charge applies. The spelling policy of the journal is to follow the author's.
Contents

Regular papers

303 Finding similar/diverse solutions in answer set programming
   Thomas Eiter, Esra Erdem, Halit Erdogan and Michael Fink

361 Expressiveness of communication in answer set programming
   Kim Rutters, Steven Schockaert, Jeroen Janssen, Dirk Vermeir
   and Martine De Cock

395 Reasoning with Forest Logic Programs and f/hybrid knowledge bases
   Cristina Feier and Stijn Heymans
