GROWTH AND DECAY ESTIMATES NEAR NON-ELEMENTARY STATIONARY POINTS*: CORRIGENDUM

COURTNEY COLEMAN

L. Rezinš has pointed out that Theorem 2 of the above paper is not always true. There are examples even in the plane for which the Lyapunov function could never be a quadratic form. Thus, Theorems 3–6, which depend upon Theorem 2, can only be considered to hold when the appropriate Lyapunov function is a quadratic form. Theorems 7–12 are independent of Theorem 2 and remain valid in general.
