INTERNATIONAL GLACIOLOGICAL SOCIETY

The Society was founded in 1936 to provide a focus for individuals interested in practical and scientific aspects of snow and ice. Membership is open to all individuals who have a scientific, practical or general interest in aspects of snow and ice study.

Papers on glaciology are printed in the Journal of Glaciology, which is published six times a year. The Society also publishes the Annals of Glaciology, a peer-reviewed, thematic journal, two to four times a year. The Society’s news bulletin, ICE, is published three times a year.

The Society sponsors symposia, meetings and workshops in many countries throughout the year.

Journal of Glaciology publishes original articles and letters concerning scientific research into any aspect of ice and snow, and interactions between ice, snow, climate and other environmental phenomena including the biosphere and permafrost. Research techniques described in the Journal include, for example, field studies, remote sensing, computer modelling and laboratory studies. Research topics include the nature of and changes in mountain glaciers and ice sheets, including former ice sheets. For example, ice cores extracted from the glaciers and ice sheets reveal detailed information on past atmospheric composition and climate, and changes in the extent and thickness of the ice sheets are also related to climate change. The physical, chemical and crystallographic properties of ice and snow are included, especially but not only as they relate to the flow of ice and to past climate. The Journal also publishes studies of sea ice, and of icebergs, along with their interactions with climate on shorter time scales, and with the ocean. Snow and avalanche research is included in the Journal, with several recent articles investigating avalanche dynamics. Snow and ice on other planets is also within the realm of the Journal of Glaciology, as are studies of atmospheric ice.

Published for the International Glaciological Society, Cambridge, UK by Cambridge University Press
Printed in the UK by Bell and Bain Ltd.

The Journal of Glaciology publishes two types of paper:

- articles on new glaciological findings and theories, or new instruments and methods, or up-to-date, coherent articles reviewing a glaciological subject
- letters of a topical nature, or comments on papers previously published in the Journal

Papers submitted should be:
- of high scientific quality
- complete and clear
- substantially different from previously published work

Length
Papers should be concise. Lines and pages should be numbered. Papers more than 12 Journal pages in length should be cleared with the Chief Editor before submission (one Journal page = about 1000 words). Letters are limited to five Journal pages.

Original submission
Submit your paper via the Journal of Glaciology online submission system at https://mc.manuscriptcentral.com/jog

Review process
Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

Final submission
The final accepted version of the paper should be in electronic format:
- Acceptable formats are:
  - Text (including tables and figure captions) – Word, rtf or LaTex (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
  - Figures – ideally in tif or eps format (otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material
The Journal of Glaciology accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

Instructions to authors
Detailed instructions to authors are available online here: cambridge.org/core/journals/journal-of-glaciology/information

General points
- Title should be concise
- Abstract should be less than 200 words
- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should:
  - be one or two column widths: up to 85 mm or up to 178 mm
  - not be in boxes
  - use strong black lines (avoid tinting if possible)
  - use SI units in labels
  - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper
- Tables should:
  - be numbered in Arabic
  - be referred to in text (as Table 1 etc.)
- Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.
- You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

Open Access and page charges
As a gold open access journal, the Journal of Glaciology is published without restriction and recovers no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution. The APC for non-IGS members is £1,200 for a regular article and £540 for a letter. The APC for IGS members is £1,080 for a regular article and £540 for a letter. The APCs quoted here are correct for 2017.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

CONTENTS Vol 63 No 239 2017

387–400 An englacial hydrologic system of brine within a cold glacier: Blood Falls, McMurdo Dry Valleys, Antarctica
Jessica A. Badgeley, Erin C. Pettit, Christina G. Carr, Sławek Tulaczyk, Jill A. Mikucki, W. Berry Lyons, Michael M. He Assuming the 7th Edition

401–422 Firn Model Intercomparison Experiment (FMICEx)
Jessica M.D. Lundin, C. Max Stevens, Robert Arthern, Christo Buzi, Anas Osi, Stefan R.M. Lutz, Sebastien B. Simon, Evan Cummings, Richard E. Scully, Will Leahy, Paul Harris, Michael M. He Assuming the 7th Edition

423–435 Roughness of a subglacial conduit under Hansbreen, Svalbard
Kenneth D. Mankoff, Jason D. Gulley, Sławek M. Tulaczyk, Matthew D. Covington, Xiaofeng Liu, Yuxiang Chen, Douglas I. Barrington, Peter S. Głowacki

436–440 Variability in ice motion and dynamic discharge from Devon Ice Cap, Nunavut, Canada
Wele Van Wyck, Jamie Davis, Luke Copland, David O. Burgess, Laurence Gray, Martin Sharp, Julian A. Dowdeswell, Toby J. Benham

441–450 Multi-decadal reduction in glacier velocities and mechanisms driving deceleration at polythermal White Glacier, Arctic Canada
Laura I. Thompson, Luke Copland

451–464 Quantifying supraglacial meltwater pathways in the Paakitsoq region, West Greenland
Conrad Koziol, Julien Seguinot, Susan K. Helm, Ian Willis

465–479 Spectral measurements of surface hoar crystal
Simon Horton, Bruce Jameson

480–494 Modelling the diversion of erratic boulders by the Vaals Glacier during the last glacial maximum
Guillaume Jouvet, Julian Seguinot, Susan Ivy-Ochs, Martin Funk

495–513 Ice flux evolution in fast flowing areas of the Greenland ice sheet over the 20th and 21st centuries
Galen P. Fleitas, Brendan C. Colhoun, Aurelien Quiquet, Simona Masić

514–522 10Be in the Akademii Nauki ice core – first results for CE 1590–1950 and implications for future chronology validation
Luca Van Albedyll, Thomas Opel, Diedrich Fritzsch, Silke Merchel, Thomas Lüthi, Georg Buessler

523–534 Glacier mass variation and its effect on surface runoff in the Beida River catchment during 1977–2013
Sheng Wang, Tandong Yao, Lide Tian, Jiaojian Pu

535–542 Changes of glaciers and glacial lakes implying corridor-barrier effects and climate change in the Hengduan Shan, southeastern Tibetan Plateau
Xin Wang, Qinoue Chui, Shihui Liu, Junfeng Wei, Zongyi Zhang, Yonghuai Liu

543–555 Ground-penetrating radar measurements of debris thickness on Linong Glacier, Nepal
Michael McCarthy, Hansh Pritchard, Ian Willis, Edward King

556–564 Eurasian ice-sheet dynamics and sensitivity to subglacial hydrology
Eythor Gudjons, Angelika Humbert, Kari Andreassen, Caroline C. Clason, Thomas Kleiner, Sebastian Beyer

Letters
565–567 Assessing mass balance with the cone penetration test
Adrian McCallum

568–572 Dependence of slope lapse rate over the Greenland ice sheet on background climate
Olga Erokhina, Irina Rogozhina, Matthias Vange, Pepijn Bakker, Jorge Bernales, André Paul, Michael Schulz
