## NOTES ON THE PREPARATION OF PAPERS FOR THE TRANSACTIONS AND PROCEEDINGS OF THE SOCIETY

A PAPER by a non-Fellow must be communicated by a Fellow or Honorary Fellow of the Society. The communicator should satisfy himself that the paper is suitable for presentation to the Society.

A paper by more than one author must be submitted with a statement, *signed by each author*, to the effect that the paper in its entirety is approved by the joint authors, and naming the author who will be responsible for the correction of proofs.

In view of the high cost of publication, authors must write their papers as concisely as possible, and avoid excess of illustrations. The MS. must be easily legible, preferably type-written on one side of quarto or foolscap paper, and with pages numbered throughout. It must be in its final form for printing. Authors are advised to retain copies of their papers as the Society cannot accept responsibility for safe custody.

Every paper must be accompanied by a synopsis, in general not exceeding 200 words, which will be printed in small type at the beginning of the paper, immediately after the title. The synopsis will not necessarily replace a 'Summary of Conclusions' which, if required, will be printed in ordinary type at the end of the paper.

In the case of a long paper a table of contents should be supplied. References to plates, etc., should be inserted in the MS. where required. Positions for the insertion of illustrations appearing in the text should be indicated. Names of genera and species should be in italics. Footnotes should be avoided where possible.

Additions to a paper after it has been finally passed for printing will, if accepted by the Council, be treated and dated as separate communications, and may, or may not, be printed immediately after the original paper.

**References to Literature** cited in the text should be listed at the end of a paper. They should be arranged alphabetically under the authors' names, with titles of journals abridged as given in the *World List of Scientific Periodicals*, except that in periodicals with English titles the ordinary English use of capital letters should be followed, e.g. *Proc. Linn. Soc.* Titles of papers, if inserted, should be quoted exactly. The undernoted are examples:

AITKEN, A. C., 1946. 'On the estimation of many statistical parameters', *Proc. Roy. Soc. Edinb.*, A., 63, 369-377.

GUTHRIE, D., 1945. *A History of Medicine*. London.

ROGERS, G. L., 1952. *Proc. Roy. Soc. Edinb.*, A, 63, 193-221.

References in the text should be made by quoting the name of the author and year of publication, thus: (Rogers 1952) or (Guthrie 1945), adding the page when necessary. When two or more papers, published by the same author in any one year, are listed, each paper should be distinguished by a small letter *a*, *b*, etc., placed after the date, thus: (Rogers 1952*a*). All references should be carefully checked before the paper is submitted.

**Illustrations.** These should preferably be line drawings (shaded by dotting, hatching, etc., if necessary). Alternatively wash drawings or photographs, which are usually reproduced as plates, may be accepted. All illustrations must be in a form suitable for reproduction.

*Line drawings* should be made with indian ink on white Bristol board. Lines or dots, etc., used for shading, should be firm and black and no washes or colour should be used. Areas where lines, stipples, etc., are to be added by the engraver should be marked *lightly in blue pencil*, and the type of shading indicated.

Wash drawings should be shaded in monochrome (black or sepia), and drawn on white paper or white Bristol board.

All drawings, should, where possible, allow of reduction to about two-thirds the linear dimensions, and the amount of the reduction should be considered, during drafting, with regard to the size and strength of shading, lettering, lines, etc. Drawings should be submitted, if possible, flat, not rolled.

*Continued on page iii of cover*

## CONTENTS

NO.		PAGE
1	Microenvironments in marine sediments. By J. G. ANDERSON, Department of Applied Microbiology, University of Strathclyde and P. S. MEADOWS, Department of Zoology, University of Glasgow . . . . .	1
2	Radioactive species in sea water. By M. S. BAXTER and I. G. MCKINLEY, Department of Chemistry, University of Glasgow . . . . .	17
3	Estuary circulation: assessment and application. By R. H. F. COLLAR, Department of Civil Engineering, University of Strathclyde . . . . .	37
4	Calcareous sediments on the nearshore continental shelf of western Scotland. By GEORGE E. FARROW, Department of Geology, University of Glasgow, MAURICE CUCCI and TERENCE P. SCOFFIN, Grant Institute of Geology, University of Edinburgh . . . . .	55
5	Animals in deep sea sediments. By JOHN D. GAGE, Dunstaffnage Marine Research Laboratory, Oban, Argyllshire . . . . .	77
6	The effects of seawater on the integrity of offshore structures. By T. HODGKISS, Department of Mechanical Engineering, University of Glasgow . . . . .	95
7	The design of scrap-tyre floating breakwaters with special reference to fish farms. By R. C. MCGREGOR, Department of Naval Architecture and Ocean Engineering, University of Glasgow . . . . .	115
8	The recovery of the polluted Clyde Estuary. By DAVID W. MACKAY, W. KEVIN TAYLER and ANNE R. HENDERSON, Clyde River Purification Board, Rivers House, Murray Road, East Kilbride, Glasgow . . . . .	135
9	The effects of change in scale on ship and semi-submersible design. By N. S. MILLER and P. M. F. M. DE SOUZA, Department of Naval Architecture and Ocean Engineering, University of Glasgow . . . . .	153
10	Underwater inspection of offshore structures. By P. H. MILNE, Department of Civil Engineering, University of Strathclyde . . . . .	181
11	The history and future of the North Sea benthos. By P. E. P. NORTON, Department of Zoology, University of Glasgow . . . . .	193
12	Mapping species distribution as a tool in marine ecology. By TREVOR A. NORTON, Department of Botany, University of Glasgow . . . . .	201
13	Aquaculture: some current problems and the way ahead. By C. J. SHEPHERD, Fish Farm Development International Ltd, 9 Woodside Crescent, Glasgow . . . . .	215
14	Long-term changes in the North Atlantic current system and their biological implications. By A. H. TAYLOR, Institute for Marine Environmental Research, Plymouth . . . . .	223

NO.		PAGE
15	A comparison of the patterns of movement between indigenous and displaced brown trout ( <i>Salmo trutta</i> L) in a small shallow loch. By P. TYTLER, D. MACHIN, University of Stirling, F. G. T. HOLLIDAY and I. G. PRIEDE, University of Aberdeen . . . . .	245
16	Production and energy flow in the macrobenthos of two sandy beaches in South West India. By A. D. ANSELL, Dunstaffnage Marine Research Laboratory, Oban, Argyllshire, D. S. MCLUSKY, Department of Biology, University of Stirling, ANN STIRLING and ANN TREVALLION, D. A. F. S. Marine Laboratory, Torry, Aberdeen . . . . .	269
17	Energy flow in the flora and meiofauna of sandy beaches. By A. L. S. MUNRO, D.A.F.S. Marine Laboratory, Torry, Aberdeen, J. B. J. WELLS, Department of Zoology, Victoria University of Wellington, Wellington, New Zealand, and A. D. MCINTYRE, University of Aberdeen . . . . .	297

The thanks of the Society are due to the Carnegie Trust for the Universities of Scotland for grants towards the cost of all these papers.
