CONTENTS

1 Introduction to the Douglass C. North memorial issue
   Geoffrey M. Hodgson

25 Cognitive rules, institutions, and economic growth: Douglass North and beyond
   Avner Greif and Joel Mokyr

53 The emergence and the evolution of property rights in ancient Greece
   Emmanouil M. L. Economou and Nicholas C. Kyriazis

79 1688 and all that: property rights, the Glorious Revolution and the rise of British capitalism
   Geoffrey M. Hodgson

109 Understanding the economics of limited access orders: incentives, organizations and the chronology of developments
   Bas Van Bavel, Erik Ansink and Bram Van Bommel

133 Determinants of property rights in Poland and Ukraine: the polity or politicians?
   Christopher A. Hartwell

161 The tortoise and the hare: how North's institutional ideas resolved a 19th century Australian fable
   Darren O'connell and Siobhan Austen

189 Institutions and the shale boom
   Ila Mitra and Drivukh Flerov

211 Informal norms trump formal constraints: the evolution of fiscal policy institutions in the United States
   Peter T. Calcagno and Edward J. López
institutions and organizations.

The Journal of Institutional Economics is an interdisciplinary journal that will be interested in all academic working in the social sciences, including economics, business, sociology, politics, geography, anthropology and philosophy. The Journal of Institutional Economics aims to provide all authors with an opportunity to submit their articles within 30 days of submission.

There must be no indication of the personal identity or institution of any author of the article within the article itself, or in the ‘properties’ of the electronic file. Normally, articles (including footnotes and references) must be no longer than 12,000 words. In special cases, such as an extended review or survey article, this limit may be extended to 15,000 words. A declaration of the total word count (including footnotes and reference list but not accompany or by the author within the article.

Papers with some formal content will be considered if it is fully explained for a general readership. The mathematics is consigned as much as possible to appendices, the assumptions have sufficient grounding in reality, and the paper enhances our understanding of past, present, or feasible socio-economic institutions.

Many economists regard the principle of scare resources as central. However, this principle is not generally extended to scarcity of human calculative abilities: these are often assumed to be unlimited. Furthermore, social institutions are often assumed as given, fixed, available, or producible at insignificant cost. In contrast, institutional economists regard institutions as costly to produce, and use human abilities in social customs and institutions in order to make decisions. Institutional economics addresses the issues of learning and cognition, and their relationship with institutional structures, cultures, routines, and habits.

This journal is registered with the Copyright Clearance Center, Inc. (CCC), Danvers, Mass. 01923-6000. Organizations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by, sections 107 and 108 of the US Copyright Law) subject to payment to the Copyright Clearance Center, Inc. for institutions (including libraries) or for individuals, which includes print only, subscriptions

Please see www.fsc.org for information. Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. For all other use, permission should be obtained from Cambridge University Press or from the Academy of Finland, PO Box 9, FIN-00014, Finland. EU customers plus postage (12.00 net($14.00 in the USA, Canada and Mexico, 49.10 in €41.00 in the UK), which includes print and electronic access, (18.00 net($21.00 in the USA, Canada and Mexico).
