Abstract  This article compares the law and practice of the European Union and Australia in respect to the search and rescue (SAR) of boat migrants, concluding that the response to individuals in peril at sea in both jurisdictions is becoming increasingly securitized. This has led to the humanitarian purpose of SAR being compromised in the name of border security. Part I contrasts the unique challenge posed by SAR operations involving migrants and asylum seekers, as opposed to other people in distress at sea. Part II analyses the relevant international legal regime governing SAR activities and its operation among European States and in offshore Australia. Part III introduces the securitization framework as the explanatory paradigm for shifting State practice and its impact in Europe and Australia. It then examines the consequences of increasing securitization of SAR in both jurisdictions and identifies common trends, including an increase in militarization and criminalization, a lack of transparency and accountability, developments relating to disembarkation and non-refoulement, and challenges relating to cooperation and commodification.

Keywords: Human rights, Australia, boat migrant, criminalization, Europe, extraterritorialization, maritime migration, Mediterranean, offshore border control, refugee, search and rescue, securitization.

I. A TALE OF TWO RESCUES

In 1997, two competitors in the Vendee Globe round-the-world solo yachting race capsized in the Southern Ocean after encountering tumultuous seas and severe gales. The sailors—one a Frenchman (Thierry Dubois), the other an Englishman (Tony Bullimore)—were 2,500 km from Australian shores when they activated their distress beacons. A search and rescue (SAR) operation

ensued, involving two ships from the Royal Australian Navy and six aircraft from the Royal Australian Air Force, with hundreds of defence and civilian personnel also pressed into service. In an operation estimated to have cost over AUD 6 million, the lone sailors were rescued after four days and brought to safety in Australia.

Contrast this with a situation that arose in the Mediterranean in 2009, when two boats carrying 154 migrants, mainly Sub-Saharan Africans, began to take on water. The MV Pinar, a Turkish cargo vessel passing nearby, was diverted to rescue the survivors, some 76 km from the Italian island of Lampedusa and 211 km from Malta. However, there was uncertainty as to where the rescues should be landed. A four-day standoff resulted between Italy and Malta, as each alleged that the other State was responsible for accepting the migrants. Italy’s claim was based on the location of the incident within Malta’s SAR zone; while Malta’s claim was based on the closer proximity of Italian territory. Against the backdrop of ongoing irregular maritime flows from North Africa to Europe, it was clear that neither country wanted to accept the rescues. Eventually, Italy relented on humanitarian grounds and permitted the Pinar to make landfall in Sicily, but not before one migrant had died on board the rescue vessel and another had to be airlifted because of a medical emergency.

The differences between these scenarios are stark, but not because they pit a benign Antipodean attitude to those in peril at sea against a malign European one. Indeed, Australia was itself heavily criticized for its own Pinar-like incident when in 2001 it refused to accept 433 asylum seekers rescued by a Norwegian vessel (MV Tampa) in international waters, within Indonesia’s SAR zone, but just 140 km from the Australian territory of Christmas Island.

Although the Vendee Globe and Pinar events activate similar international legal obligations, they also highlight practical differences that arise from the number of persons in need of rescue; their nationality and migration status; their likelihood of claiming international protection as refugees; the antecedent history of rescues at sea; and the domestic political consequences of benevolence towards boat migrants. The application of overlapping legal regimes, together with uncertainties in the rights and obligations of affected

States and individuals, has created opportunities for disparate responses.\textsuperscript{6} As one author remarked, ‘coastal States are more open to accept those less in need of refuge in the certain knowledge that they can easily be repatriated, whereas those most in need of refuge will be spurned as a potential burden’.\textsuperscript{7}

This article examines the shift that has occurred in the European Union (EU) and Australia from a fundamentally humanitarian mission of SAR to a complex, securitized response to boat migration. The result is a situation in which the humanitarian purpose of SAR has become compromised in the name of border security with ensuing consequences. On this basis, Part II examines the core humanitarian dimensions of SAR under international law generally and its operation within the EU and in Australia. Part III introduces the securitization framework and its ramifications for the shift in approaches to SAR in each region. It then analyses the consequences of increasing securitization of SAR in both jurisdictions. These include an increase in militarization, lack of transparency and accountability, developments relating to disembarkation and non-refoulement, criminalization, commodification, and impediments to effective cooperation. The article concludes with some recommendations and suggestions for future research. Throughout the article we use the term ‘boat migrant’ to refer to migrants and asylum seekers voyaging by sea. It is significant to note that the overwhelming majority of those travelling to Europe and Australia, during the time that approaches to SAR were revised, have been found to be refugees.\textsuperscript{8}

\section*{II. SHIFTING LEGAL REGIMES FOR SEARCH AND RESCUE AT SEA}

The international laws that regulate maritime search and rescue are today a large canvas of overlapping treaty regimes. The most important regimes, chronologically, are the \textit{International Convention for the Safety of Life at Sea 1974} (SOLAS Convention),\textsuperscript{9} the \textit{International Convention on Maritime Search

and Rescue 1979 (SAR Convention), and the United Nations Convention on the Law of the Sea 1982 (UNCLOS). Each has garnered substantial acceptance by the international community—the SOLAS Convention presently has 162 parties; the SAR Convention has 107 parties; and UNCLOS has 168 parties. Australia is party to all three conventions. The EU and all its Member States are party to UNCLOS and are thus respectively responsible for matters over which each has competence under EU law—which excludes SAR in relation to the Union, as further discussed below. All EU Member States have ratified the SOLAS Convention, and all but three Member States are party to the SAR Convention. Gaps in the universal coverage of the conventions still leave scope for the operation of customary international law, which also recognizes a legal obligation to rescue a person in distress at sea.

The Mediterranean has long been the locus for SAR activities in Europe, although the crisis is more widespread. In 2015, the number of arrivals peaked, with more than a million persons reaching the EU by sea, and nearly 4,000 perishing en route. While the number of arrivals dropped to just over 356,000 the following year, the rate of dead and missing increased to more than 5,000. This is a significant proportion of the 7,763 total migrant deaths worldwide for the same period. It is only since the implementation of the

12 ‘Status of Multilateral Conventions and Instruments in respect of which the International Maritime Organization or its Secretary-General Performs Depository or Other Functions’ (International Maritime Organization, 10 October 2016) (<http://www.imo.org/en/AboutConventions/StatusOfConventions/Pages/Default.aspx>).

14 The three EU Member States which have not ratified the SAR Convention are Austria, the Czech Republic and Slovakia. It is important to note that all three are landlocked and hence have no responsibility over SAR regions: IMO Status of Ratifications (n 12).

17 For a review covering developments since the inception of Frontex, see V Moreno-Lax, Accessing Asylum in Europe (Oxford University Press 2017) ch 6.

so-called EU-Turkey ‘deal’ of March 2016 that the Aegean route has been sealed.\textsuperscript{20} Cooperation with the Libyan Coast Guard thereafter,\textsuperscript{21} combining SAR with anti-smuggling operations,\textsuperscript{22} has also translated in reduced crossings through the Central Mediterranean.\textsuperscript{23}

Australia’s experience of boat migration is modest when compared to Europe. A little over 60,000 people have arrived in Australia by boat without authorization since 2000.\textsuperscript{24} The number of arrivals peaked in 2013 at 20,587.\textsuperscript{25} The subsequent introduction of a suite of restrictive border control measures has reduced the number to close to zero.\textsuperscript{26} A small number of vessels continue to attempt the journey to Australia but are intercepted and deflected at sea, either to their point of departure, or to one of Australia’s offshore regional processing facilities in Nauru or Papua New Guinea (‘PNG’).\textsuperscript{27} Estimating the number of migrants who have died at sea while attempting to make the journey to Australia is a contentious issue, with claims that the government at times may have inflated the numbers in order to justify its harsh deterrence policies.\textsuperscript{28} There is no doubting, however, that there has been significant loss of life at sea, with one independent monitoring body estimating just over 1,900 deaths since January 2000.\textsuperscript{29}

Although European States and Australia are bound by key international legal obligations associated with SAR, their respective experiences with boat migrants have triggered responses intended to enhance their border security. This Part highlights the central obligations associated with SAR but indicates a shift in State practice in the interpretation and application of these international norms. The first section sets out the humanitarian purpose underpinning the international legal regime in place for SAR, which binds

\textsuperscript{23} On the delivery of the European Agenda on Migration, COM(2017) 558, 2.
\textsuperscript{26} ibid.
EU Member States and Australia. It then assesses the European approach to SAR, noting the increasing role played by the EU via its external frontiers agency, the European Border and Coastguard (‘the EU Coastguard’, also known as ‘Frontex’), in border management.30 The third section assesses the Australian approach to SAR, which demonstrates a conflation of humanitarian norms of SAR with border security imperatives.

A. Humanitarian Dimensions of the International Legal Regime for SAR

The foundations of SAR may be seen in early Judeo-Christian writings,31 and were expounded by the earliest scholars of international law.32 The current manifestation of this humanitarian obligation is the legal requirement enshrined in Article 98(1) of UNCLOS. This Article provides that every State shall require the master of a ship flying its flag to (a) assist any person found at sea in danger of being lost, and (b) proceed with all possible speed to the rescue of persons in distress. By its terms, the obligation falls on the flag State to require a master, through domestic legislation, to take action in specific circumstances. In practice, the obligation is discharged by individuals (masters) who may have to interrupt their commercial voyages to attend to those in need. The beneficiaries of the obligation are persons in ‘danger’ or ‘distress’; and the nature of the obligation is to ‘render assistance’ and ‘rescue’. However, the absence of definitions of these terms has left room for disputation, particularly as to when a rescue operation is required and when it is completed.33 The obligations are not absolute: a master is not required to seriously endanger his ship, crew or passengers; nor to do more than may ‘reasonably be expected’.

In addition to the obligations that fall on flag States, coastal States have obligations that extend beyond the mere making of laws. By Article 98(2), coastal States must promote the establishment, operation and maintenance of

32 For example, de Vattel claimed that ‘to give assistance in such extreme necessity is so essentially conformable to humanity, that the duty is seldom neglected by any nation that has received the slightest polish of civilisation’. E de Vattel, The Law of Nations, Or, Principles of the Law of Nature, Applied to the Conduct and Affairs of Nations and Sovereigns, with Three Early Essays on the Origin and Nature of Natural Law and on Luxury (LF edn 1797) Bk II Ch I [5] <http://oll.libertyfund.org/titles/2246>.
‘an adequate and effective search and rescue service’ regarding safety at sea, and must cooperate with neighbouring States where required. Under the SAR Convention, States are required to participate in the development of SAR services ‘to ensure that assistance is rendered to any person in distress at sea’, and they must also establish SAR regions by agreement with other States. Pursuant to this obligation, the world’s oceans have been divided into multiple SAR regions, with responsibility assigned to proximate coastal States. Australia, for example, has a SAR region of some 53,000,000 km², covering one-tenth of the world’s surface, and bordering the SAR regions of ten other countries. In Europe, coastal States at both sides of the Mediterranean cover the entirety of the sea’s extension—except for the waters close to Libya, which has never officially declared a SAR zone or deposited information about its SAR services with the International Maritime Organization (IMO).

Under the SOLAS Convention, a State party is required to regulate the activities of all ships flying its flag regardless of where they sail, and to provide for the rescue of persons in distress at sea ‘around its coasts’, without limit as to distance or maritime zone. Yet despite this apparent breadth, there are long-standing gaps in treaty law that give ‘some leeway for political expediency’. Notably, the Annex to the 1974 SOLAS Convention, as originally concluded, imposed an obligation on a master of a ship ‘to proceed with all speed to the assistance of … persons in distress’. The beneficiaries of the obligation are persons in ‘distress’ (not danger) on a ship or survival craft, and the obligation is limited to giving assistance (not rescue). Like Article 98(a) of UNCLOS, the obligation is not absolute: a master’s obligation arises only

34 The SOLAS Convention contains a provision akin to art 98(2) of UNCLOS. See SOLAS Convention, Annex, ch 5 reg 15(a). These arrangements are to include maritime safety facilities adequate for the location and rescue of such persons.

35 SAR Convention, Annex, [2.1.1], [2.1.4].

38 SOLAS Convention, art II.

39 SOLAS Convention, Annex, ch 5 reg 15(a); Pallis (n 16) 335. Note, however, that SOLAS generally does not apply to public vessels such as warships and coastguard vessels participating in operations described in this article: SOLAS Convention, reg 3(a)(i).

41 Strictly speaking, however, a State’s international legal obligations arise from the requirement in art 1(b) to promulgate all laws necessary to give full and complete effect to the instrument and its Annex.
upon receiving a distress signal, and does not extend to giving assistance considered to be unreasonable or unnecessary.  

A key obligation in place under the SAR Convention since its inception in 1979 is that States must ensure that assistance is provided to any person in distress at sea ‘regardless of the nationality status of such a person or the circumstances in which that person is found’. The 1998 revisions to the SAR Convention also contain definitions of ‘search’ and ‘rescue’. ‘Search’ is an operation to locate persons in distress, and ‘rescue’ is an operation ‘to retrieve persons in distress, provide for their initial medical or other needs, and deliver them to a place of safety’. A ‘place of safety’, however, is not defined, and it is clear from other provisions that disembarkation lies in the discretion of the coastal State.

Concerns about the definition of distress as well as ambiguity about when rescue is completed prompted a dialogue between States and international organizations to provide greater certainty for stakeholders. In 2004, the IMO issued Guidelines on the Treatment of Persons Rescued at Sea (IMO Guidelines) and amended the SOLAS Convention, with operative effect from 2006. The treaty amendments clarify the master’s duty to provide assistance to persons in distress. That duty is now expressed to apply ‘regardless of the nationality or status of such persons or the circumstances in which they are found’, and requires the master to treat rescuees ‘with humanity, within the capabilities and limitations of the ship’. Additional amendments address the issue of disembarkation, somewhat elliptically. State parties are now obliged to cooperate to ensure that masters are relieved of their obligations to assist ‘with minimum further deviation from the ship’s intended voyage’. The State responsible for search and rescue in that region is given ‘primary responsibility’ to ensure that assisted survivors are disembarked and delivered to a place of safety, taking into account the particular circumstances of the case. Some commentators have argued that the State coordinating the search and rescue has a residual obligation to allow disembarkation on its territory, if safe disembarkation elsewhere is not possible, but the issue is contentious.

---

42 This does not mean that there are no other relevant obligations, eg, flowing from the right to life under human rights law, enjoining States to do everything within their power to preserve human life. On the extent of positive duties arising from the intersection between SAR and human rights law, see Komp (n 33).

43 SAR Convention, Annex, [2.1.10].

44 ibid [1.3].

45 ibid [3.1]; For example, States are required to cooperate for the purpose of allowing another State entry into its territorial sea to conduct SAR operations: see Barnes (n 7) 53.

46 For a history, see Barnes (n 7) 106–11.

50 S Trevisanut, ‘Is There a Right to be Rescued at Sea? A Constructive View’ (2014) QuestIntL, 7. cf Moreno-Lax (n 6).
The Guidelines provide direction as to what ‘a place of safety’ is, but in terms that are themselves imprecise.\(^{51}\) A place of safety is a location where rescue operations are considered to terminate, and where the basic human needs of survivors to food, shelter, and medical treatment can be met. At first blush, this sounds like a location on land, but the Guidelines recognize that, at least \textit{ad interim}, it may also be a location at sea, such as a rescue vessel, until the survivors are disembarked to their next destination. Yet the Guidelines also state that ‘an assisting ship should not be considered a place of safety based solely on the fact that the survivors are no longer in immediate danger once aboard the ship’.\(^{52}\) Significantly, the Guidelines also stipulate that asylum seekers rescued at sea should not be disembarked in territories where they may face a well-founded fear of persecution.\(^{53}\) While the purport of these legal obligations is clear, there is sufficient obfuscation in the terms to allow for varied implementation by States.

**B. European Approach to ‘Incidental SAR’ and its Subsumption in Border Control**

The international SAR framework applies fully to EU Member States, which retain distinct responsibility for rescue at sea. Only Malta objected to the latest SAR revisions at the IMO—with that, however, not precluding the entry into force of the amendments.\(^{54}\) And the humanitarian dimension of SAR and its intertwining with human rights obligations has, moreover, been forcefully recognized by the European Court of Human Rights in its \textit{Hirsi} judgment.\(^{55}\)

Yet, even with these core obligations falling on individual Member States, the EU has moved to a central position in managing SAR, because of the perceived implications for border security.\(^{56}\) Border control and SAR activity have (operationally) merged, with the former gaining (practical) pre-eminence over the latter—in line with the allocation of powers in the EU Treaties.\(^{57}\) Indeed, ‘maritime search and rescue and disembarkation are the competence

\(^{52}\) IMO, Res MSC.167(78), [6.12]–[6.18].

\(^{53}\) IMO, Res MSC.167(78), [6.17].

\(^{54}\) IMO Status of Ratifications (n 12). Malta’s objection means that it is not bound by the amendments.

of the Member States [not Frontex or the EU]. The main function of the EU Coastguard is to coordinate operational cooperation between the Member States so as to reinforce the monitoring of the common external frontiers, with ‘saving the lives of migrants’ arising as a desirable by-product of maritime intervention.

SAR has been demoted to a second plane also due to the division of labour regarding the launching and running of joint operations. Although the EU Coastguard is supposedly just a facilitator of operational cooperation, it plays a leading role in initiating and approving joint activities, and in their planning, deployment, and strategic evaluation. This blurs the lines of responsibility between it and the Member States and creates uncertainty regarding attribution of conduct that may violate human rights. Their mandates are increasingly intermingled—although Member States remain ‘in principle’ responsible for carrying out border controls (and are exclusively competent to exercise force), the EU Coastguard enables efficient controls on the ground through intelligence provision, tactical coordination, and operational funding. A co-dependency emerges between the EU Coastguard and the Member States, with the former translating the ambitions of the latter into operational detail—the whole focus thus remaining on border security, rather than on SAR at sea.

Joint missions may be launched at the request of a Member State, evaluated and ‘approved’ by the EU Coastguard. Article 15(4) of the Coastguard Regulation speaks of its faculty to ‘recommend’ to Member States the launch of joint operations or rapid border interventions. But in relation to maritime operations, it appears that search and rescue per se cannot constitute the overarching objective of a joint mission. Although ‘some situations may involve humanitarian emergencies and rescue at sea’, border surveillance

62 EBCGR art 15(1)–(3).
63 Ibid; The more forceful wording originally proposed by the European Commission granting Frontex a ‘right to intervene’ has not been finally retained, but that does not detract from the fact that the Agency can anyway exert significant influence; see also J Rijpma, ‘The Proposal for a European Border and Coast Guard: Evolution or Revolution in External Border Management?’ (2016) European Parliament Study PE 556.934.
remains the primary goal. This follows ‘[t]he objective of Union policy in the field’. While operations may contribute ‘to ensuring the protection and saving of lives’, their ultimate aspiration remains ‘to prevent unauthorised border crossings, to counter cross-border criminality and to apprehend … those persons who have crossed the border in an irregular manner’. This does not mean the Member States and the EU Coastguard free themselves of their SAR and human rights obligations, but it requires that surveillance ‘be effective in preventing and discouraging persons from circumventing checks at border crossing points’. The bias is thus towards control and security, not SAR.

It therefore appears that it will only be ‘during a border surveillance operation at sea’ that ‘a situation may occur where it will be necessary to render assistance to persons found in distress’—SAR is thus framed as incidental to the patrolling mission. With that in mind, operational plans must contemplate a series of additional details, ‘in accordance with the applicable provisions of international instruments, governing [SAR] situations and … the protection of [human] rights’. These include rules on the identification and communication of cases of uncertainty, alert and distress; modalities of disembarkation; and the contact details of national authorities competent to adopt adequate follow-up measures.

In case persons are found to be in distress, Member States (not the EU Coastguard) ‘shall observe their obligation to render assistance’ and ‘ensure that their participating units comply with that obligation’. The EU Coastguard is not directly responsible for guaranteeing compliance with SAR obligations, but only to support EU norms by reinforcing, assessing, and coordinating the actions of Member States.

The 2014 Maritime Surveillance Regulation (MSR) provides, nonetheless, some guidance regarding SAR. In line with international obligations, it makes explicit that the nationality, status or circumstances in which the persons are found are irrelevant. Moreover, the existence of an explicit request for assistance is considered unnecessary. Other factors must also be taken into account for the determination of a SAR-relevant situation, including the seaworthiness of the vessel, the number and medical condition of persons on board, the availability of water, fuel and food supplies, the absence of qualified crew and equipment, as well as the weather and sea conditions. The presence of pregnant women, minors, and asylum seekers may be decisive, as the special needs of vulnerable persons must be

65 MSR art 1, recitals 3 and 20, defining the ‘scope of application’.
67 MSR arts 4(7), 9(1) and recitals 8–10.
68 MSR recital 1.
69 This was also the case under the predecessor of the MSR. See V Moreno-Lax, ‘The EU Regime on Interdiction, Search and Rescue, and Disembarkation: The Frontex Guidelines for Intervention at Sea’ (2010) 25 IJMCL 621.
70 MSR recital 14 (emphasis added).
71 MSR recital 15.

73 EBCGR art 5 (emphasis added).
74 MSR art 9(1).
75 MSR art 9(1(f).
‘addressed’ throughout the operation. In such circumstances, participating units must transmit all the relevant details to the SAR Centre responsible for the SAR zone concerned and put themselves at its disposal. Pending instructions, they must take all the necessary safety measures, avoiding any action that might aggravate the situation or increase the chances of injury or loss of life, even if the persons on board refuse to accept assistance. So, at the end of the day, EU law adds an extra layer of specification to the definition of ‘distress’ on top of the 2004 IMO amendments, complementing the international regime—if only in this incidental manner that subordinates the relevance of SAR to border security operations, arguably in disconformity with the humanitarian spirit of maritime conventions and ‘elementary considerations of humanity’ in customary law.

Triton offers a key example of one recent Frontex/EU Coastguard-coordinated operation in the Mediterranean following this pattern of relegated SAR action. It was launched as a replacement to the Italian (humanitarian/military) Mare Nostrum operation, which rescued more than 130,000 persons between October 2013 and October 2014, but with a much less ambitious remit. While Mare Nostrum had a proactive SAR component—and was partly discontinued precisely because of its perceived ‘magnet’ effect on boat arrivals—for Triton, ‘the focus … is primarily border management’. As the European Commission confirmed, ‘Frontex is neither a search and rescue

body nor does it take up the functions of a Rescue Coordination Centre’. Its role is merely to ‘assist Member States to fulfil their obligations under international maritime law to render assistance to persons in distress’. As such, it was in fact considered that Triton would ‘not replace or substitute Italian obligations’, even if Mare Nostrum had been dismantled.

In May 2015, the revised operational plan of what has become Triton Plus was put forward to help Frontex ‘fulfil its dual role of coordinating operational border support to Member States under pressure, and helping to save the lives of migrants at sea’. Yet, Frontex’s Executive Director has insisted that saving migrants’ lives ‘shouldn’t be’ the priority for patrols because this lies beyond the Agency’s legal mandate. The framing of SAR as an incident of frontier control is thus confirmed in the EU’s current approach to boat migration across the Mediterranean, distilling a securitized understanding thereof, with the foremost concern being border management rather than the protection of life at sea.

C. Offshore Australia: Increasing Conflation of SAR with Border Security

The Australian government has been even bolder in its attempts at subsuming SAR under border control operations. In fact, there appears to have been a deliberate attempt to conflate the two, in order to expand the government’s power to intercept, board and divert asylum seekers and migrants attempting to reach Australia by sea—challenging the applicable law of the sea rules on jurisdictional zones delimiting interdiction powers, and human rights law. While, on paper, the rules governing SAR activities are distinct to those that govern security-related interdiction activities, in practice, the line between the two regimes is purposely distorted.

The Rescue Coordination Centre, within the Australian Maritime Safety Authority (AMSA), is the agency designated with the task of coordinating

---

91 For a detailed analysis of these jurisdictional zones and respective powers exercisable in each, see Churchill and Lowe (n 15) 60–222; Rothwell and Stephens (n 15) 30–179; D Guilfoyle, Shipping Interdiction and the Law of the Sea (Cambridge University Press 2009) 7–20; Papastavridis (n 49) 259–307 (focusing on the scope of powers to intercept persons on the high seas).
92 Established by the Australian Maritime Safety Authority Act 1990 (Cth).
Australia’s SAR operations. The rules governing how SAR is to be planned and carried out are promulgated in the National Search and Rescue Manual. While the document contains extensive detail in relation to SAR procedures and techniques, it makes no specific reference to the meaning of a ‘place of safety’ or selecting a point of disembarkation (let alone in conformity with non-refoulement). There is some guidance in relation to the standard for ‘distress’, which is said to occur when a vessel requires ‘immediate assistance’ resulting from ‘grave or imminent danger’—so, presumably, unseaworthiness alone, which is the typical characteristic of boat migrant vessels, will not per se trigger a SAR response on the part of Australia.

Security and border control related maritime interdiction activities are coordinated by Australia’s Maritime Border Command (MBC). The government’s maritime enforcement powers are set out in the Maritime Powers Act 2013 (Cth) (‘MPA’). Where a vessel is suspected of violating any Australian law, including immigration laws, the Act authorizes the use of certain interdiction powers. These include boarding, obtaining information, searching, detaining, seizing and retaining things; and moving and detaining persons. The Act also makes it clear that authorization from a statutory officer for the exercise of maritime powers is not required where the exercise is to ensure the safety of the officers or any other person. At times, the Australian Government has also claimed that maritime interdiction operations are authorized under its non-statutory executive (or prerogative) power.

By comparison to the EU experience, there are no publicly available rules of engagement, regulations, or protocols in relation to Australia’s maritime enforcement activities. The only relevant publicly available resource is the Guide to Australian Maritime Security Arrangements (GAMSA). This document sets out stakeholder roles in relation to eight civil maritime security threats, one of which is irregular maritime arrivals.

In practice, it can be very difficult to distinguish which powers the government purports to be exercising when it intercepts and diverts irregular migrant vessels. Under current arrangements, AMSA’s Rescue Coordination Centre is the first point of contact for both maritime safety and maritime

---

security incidents. Where the incident is of a security nature, the Rescue Coordination Centre informs the MBC, which then assumes responsibility for providing the response. The MBC coordinates interdiction activities using Australian Defence Force (ADF) or Australian Border Force (ABF) vessels. In cases of SAR, the Rescue Coordination Centre coordinates vessels to carry out the rescue. These vessels could be commercial ships or vessels operated by any Commonwealth or State or territory agency. Given the fact that the ADF and ABF vessels are stationed in the regions most affected by boat migration, it is often one of these vessels that are deployed to carry out the SAR operation. It is also important to note that an operation that starts out as an interdiction could transform into a SAR operation and vice versa, with authority for coordination switching between AMSA and the MBC accordingly.

The functions of SAR and maritime interdiction have been further conflated as a result of Operation Sovereign Borders, launched in late 2013. The military-led initiative has the goal of stopping boats suspected of carrying irregular migrants from entering Australian territory. This is achieved by physically intercepting and deflecting their vessels. The entire operation is shrouded in secrecy, with the government adopting a policy of not commenting on ‘operational matters’ for security reasons. Given this secrecy, there is little information about how and where interdiction and push-back operations occur and whether the government purports to be acting under its SAR or interdiction powers.

The result is that it is difficult to assess whether Australia complies with its obligations under international law or, rather, whether it exploits SAR provisions to expand its interdiction authority beyond allocated jurisdictional zones. The final outcome—by contrast to the ‘relegated’ or ‘incidental SAR’
paradigm reigning in Europe—is a ‘conflated SAR’ model that confuses rescue at sea with border security objectives.

III. THE EXPLANATORY PARADIGM: SECURITIZATION

Although the international SAR regime has its own distinct requirements, processes, and institutions, the increasing linkage between this regime and migration control has begun to infuse SAR with similar characterizations and responses to those seen in relation to irregular migration and its portrayal as ‘a threat’. The basis for the shifting approach, away from the core focus of humanitarian assistance, is the use of a ‘securitization frame’, which assists in understanding why States take certain actions in response to boat migration.

Securitization is the process whereby actors with sufficient authority identify existential threats to the State, society, or other particular object, and seek to implement extraordinary measures in response to the putative threat.

The arrival of boat migrants is considered to be a threat to the destination State in this scenario. The threat might be cast as a result of the unknown background of the individuals, who may be perceived to be existing or potential criminals or terrorists. But the threat may be perceived more broadly as somehow jeopardizing the existing lifestyles, economy or cultures of the destination State. The confluence (or subordination) of SAR with (or to) migration control results in boat migrants constituting a threat, irrespective of whether they were rescued from a situation of distress or have otherwise entered a country without authorization.

Within the securitization frame, the actors who characterize the threat must have authority to speak about security and an audience that is receptive to how that threat is constructed. In Australia, one of the main political parties came to power in 2013 with a platform that included the mantra of

---

106 For an analysis of contemporary ‘threats to maritime security’ that have contributed to increased securitization, see Papastavridis (n 49).

‘stop the boats’.112 In the EU, the European Coastguard was created with a mission ‘to integrate national border security systems of Member States against all kinds of threats that could happen at or through the external border of the Member States’.113 As indicated above in relation to EU practice, boat migration has been one of the threats identified as requiring a border security response.

In implementing responses to a threat, a securitization frame may allow for drastic or atypical responses that prioritize ameliorating the security concerns. One example is seen in UN Security Council Resolution 2240 (2015), in which the Security Council authorizes inspection of vessels on the high seas off the coast of Libya that are reasonably suspected of migrant smuggling or human trafficking.114 In making this decision,115 the Security Council acted under Chapter VII of the UN Charter, which concerns threats to the peace, breaches of the peace, and acts of aggression.116 Despite the fact that a large number of deaths occurring during sea voyages across the Mediterranean have been attributed to unseaworthiness of the vessels, and hence might attract a response under the SAR regime, the Resolution focuses on the securitized perspective of people smuggling and human trafficking. The only mention of SAR is in the preambular paragraphs, where the Security Council recalls the existence of the SAR Convention, but, then again, frames loss of life at sea as a ‘threat to international peace and security’.

The increasing conflation of SAR with migration control (as in Australia), or the subordination of the SAR regime to migration control rules and processes (as in the EU), is highly problematic. The securitization of SAR runs the risk of setting a crisis tone and prompting short-term responses that emphasize State security.117 As discussed further below, the practice of the EU and Australia presents compelling examples of securitizing SAR in the context of boat migration, which has distorted the primary humanitarian object of the regime. In both settings, although there is rhetoric in relation to saving lives at sea, the commitment to human rights obligations is lacking in reality, once effective control is being exercised over boat migrants.118 Instead, legal frameworks,
government institutions, and actual practices indicate an emphasis on border control and hence national security that overshadows—if not altogether sidelines—SAR in the context of boat migration.

Against this background, this Part explores the commonalities that exist between European and Australian experiences and the consequences of securitization. Specifically, it addresses the increasing militarization in SAR responses, the difficulties arising from differing interpretations of relevant legal terms, the lack of transparency and accountability, which compound the first two trends, the moves towards criminalizing humanitarian assistance, and the impediments to effective cooperation around SAR.

### A. Militarization

The response to boat migration in both the EU and Australia is now marked by a trend towards increasing militarization of on-water responses to migrant vessels. Australia’s *Operation Sovereign Borders* is a military-led initiative that operates under the command of an Army General.\(^{119}\) The Maritime Border Command tasked with coordinating maritime interdiction activities, while technically a civil maritime security authority, is commanded by a Rear Admiral seconded from Defence, who is responsible for coordinating assets and personnel from both the Australian Border Force (ABF) and Australian Defence Force (ADF). The ADF’s contribution to *Operation Sovereign Borders* is codenamed *Operation RESOLUTE*.\(^{120}\) It involves the deployment of up to 800 ADF personnel at sea, in the air and on land, who work alongside personnel from the ABF.\(^{121}\) Resources allocated to the operation include Air Force AP-3C Orion maritime patrol aircraft, Navy Armidale Class Patrol Boats, and two Navy Major Fleet Units.\(^{122}\)

In July 2017, the Department of Immigration and Border Protection confirmed that Australia had intercepted and turned back 30 boats carrying a total of 765 asylum seekers since the commencement of *Operation Sovereign Borders*.\(^{123}\) Details about individual operations were not provided. Media reports indicate that the majority of these incidents involved interdicting Indonesian vessels carrying boat migrants and returning them to the edge of

---

\(^{121}\) Ibid.

Indonesian territorial waters, although more recent incidents have included turn-backs to Vietnam and Sri Lanka, rising high risks of refoulement.\(^{124}\) The precise locations of the interdictions are unclear. Some boat migrants have been towed back in their original vessels, while others have been transferred to custom-built orange lifeboats stocked with food, water, and medical supplies.\(^{125}\) It appears that the orange lifeboats have now been replaced by a fleet of Vietnamese-built wooden vessels resembling Asian fishing boats.\(^{126}\)

The response in Europe has been similarly militarized—and heedless of non-refoulement and other human rights obligations. The European Council’s Ten-Point Action Plan, adopted to implement the European Agenda on Migration at the outbreak of the ‘migration crisis’ in 2015, proposed the establishment of an EU-led naval force operation (EUNAVFOR) to operate in parallel to Frontex-led activities.\(^{127}\) This was not intended to buttress SAR but rather ‘to better contain [sic] the growing flows of illegal migration’.\(^{128}\)

EUNAVFOR Med was launched shortly afterwards.\(^{129}\) The EU Commissioner for Home Affairs described the ultimate goal of the operation as the ‘war on smugglers’.\(^{130}\) Several operational phases have been distinguished: the first for surveillance and assessment; the second for the search and seizure of migrant boats, including for the ‘disposal of vessels … preferably before use’ and the apprehension of smugglers on high seas; a third phase taking place within Libyan jurisdiction; and a final phase for completion and handing over of responsibilities to the Libyan Coastguard, once sufficient progress will have been achieved.

The start-up phase, Operation Sophia, was launched in June 2015.\(^{131}\) Yet, to launch phases 2 and 3, it was acknowledged that the EU lacked jurisdiction, as

\(^{124}\) A Schloenhardt and C Craig, “‘Turning Back the Boats’: Australia’s Interdiction of Irregular Migrants at Sea” (2015) 27 IJRL 536, 548–58 (collating media reports in relation to Australian maritime interdiction activities up until 15 November 2014); Phillips (n 25) 4 (referencing reports of turnbacks to Sri Lanka and Vietnam).

\(^{125}\) Schloenhardt and Craig (n 124).

\(^{128}\) Council Conclusions (EUCO 22/15) of 26 June 2015, 1.

these entailed extraterritorial recourse to military force. Consequently, diplomatic representations were made at the bilateral level to persuade Libya and Tunisia, and at UN level to obtain the authorization of the Security Council. The latter resulted in UNSC Resolution 2240, on 9 October 2015, authorizing Member States ‘to use all measures commensurate to the specific circumstances’ to ‘inspect’, ‘seize’, and possibly ‘dispose of’ migrant vessels (including inflatable boats, rafts, and dinghies), so as to ‘disrupt the organised criminal enterprises engaged in migrant smuggling and human trafficking’, but only with respect to ‘the situation of smuggling and trafficking on the high seas off the coast of Libya’. The fears expressed by the EU Defence Chiefs, when consulted on the design of the operation in documents filtered to the press by Wikileaks, are worth noting. They anticipated that EUNAVFOR Med was doomed to fail, and that it would further destabilize the region and divert migration to alternative (more dangerous) routes, thus paradoxically intensifying smuggling and trafficking activity. The clear evidence of spiralling fatality rates in the Mediterranean points, precisely, to the inadequacy of replacing SAR operations with law-enforcement or military missions unfit for purpose.

Nonetheless, EUNAVFOR Med’s mandate has been extended and expanded to help implement an arms embargo on Libya and train the Libyan Navy and Coastguard, so that they can ‘decrease irregular migration from Libya’. The long-term aim of this approach is to create a functioning Libyan capacity

---

135 Council of the European Union (n 132).

to prevent migrants from leaving the country—ignoring the rights to leave and to asylum recognized in international and EU law. Crucially, this implies that ‘[i]f migrant boats intercepted in Libyan waters by Libyan vessels are taken back to Libyan shores … the EU non-refoulement obligations would not be triggered’ (at least not directly or immediately).

The goal is for pre-emptive take-backs to ultimately replace SAR, shifting the responsibility for refugee and migrant flows to Libya.

There is a similar approach adopted in the Aegean, where NATO launched an operation similar to EUNAVFOR Med in February 2016 along Turkish shores. Just like the Frontex missions and Operation Sophia, its goal is ‘to [contribute to] the international efforts to stem the illegal trafficking and illegal migration in the Aegean’, in the words of NATO Secretary General. The operation is formally only ‘tasked to conduct reconnaissance, monitoring and surveillance of illegal crossings in the Aegean’. It does not have a SAR or border control competence. However, when encountered with distress situations, it has been agreed that assets will proceed to the rescue of those concerned, returning them directly to Turkey—whatever the impact on fundamental freedoms. The conclusion of the EU–Turkey deal in March 2016, whereby Turkey must impede boat migrants’ exit and accept the readmission of all those arriving irregularly on EU soil in exchange for financial and other support, facilitates this course. Returns to Turkey, through disembarkations performed upon rescue or interdiction by NATO assets, are being conducted in disregard of non-refoulement, which should determine the choice of ‘place of safety’, according to IMO Guidelines and human rights law, as further detailed

---

147 B Frelick, ‘NATO Enters the Migration Control Business’ (EUObserver, 18 February 2016) <https://euobserver.com/opinion/132309>; On the precarious situation of refugees and migrants in
The full implications of SAR obligations are being discounted, if not instrumentalized for security purposes. The situation has apparently been ‘normalised’ after the launch of Operation Sea Guardian in November 2016, and the EU–NATO Warsaw Declaration, where Member States seem to have endorsed NATO’s perspective and decided to join efforts. NATO warships are thus now helping the EU’s cause to stem the flow of mostly Syrian asylum seekers across the Eastern Mediterranean. According to the Greek Defence Minister, ‘[t]he prevention of refugee flows [sic] with NATO ships will continue as long as there are prospective illegal migrants or refugees [sic] on the other side of the Aegean’. And so, arguably, with NATO’s involvement in migration control, ‘a dangerous shift toward militarization of a humanitarian crisis’ has been consolidated in the Mediterranean Sea.

B. Disembarkation, ‘Place of Safety’, and Non-Refoulement

One of the key issues that arises during SAR activities involving boat migrants is the selection of an appropriate location where rescuees can be disembarked. This issue was partially addressed in the 2004 SOLAS amendments and associated IMO Guidelines, but significant ambiguities remain. The EU has sought to tackle this in the 2014 Maritime Surveillance Regulation (MSR) by articulating modalities for disembarkation following the rescue or interception of vessels in the context of Frontex-coordinated operations. These must be agreed in advance and inserted in the operational plan of the relevant deployment. As a rule, where interdiction occurs in the territorial waters or contiguous zone, disembarkation should normally take place in the coastal Member State. But, if rescue or interception occurs on the high seas, the preferred place of disembarkation is ‘in the third country from which the vessel is assumed to have departed’. Where disembarkation follows a SAR incident, it is for the relevant Rescue

---

149 The full implications of SAR obligations are being discounted, if not instrumentalized for security purposes.

150 The situation has apparently been ‘normalised’ after the launch of Operation Sea Guardian in November 2016, and the EU–NATO Warsaw Declaration, where Member States seem to have endorsed NATO’s perspective and decided to join efforts. NATO warships are thus now helping the EU’s cause to stem the flow of mostly Syrian asylum seekers across the Eastern Mediterranean. According to the Greek Defence Minister, ‘[t]he prevention of refugee flows [sic] with NATO ships will continue as long as there are prospective illegal migrants or refugees [sic] on the other side of the Aegean’.

151 And so, arguably, with NATO’s involvement in migration control, ‘a dangerous shift toward militarization of a humanitarian crisis’ has been consolidated in the Mediterranean Sea.

153 See (n 46) and related discussion.

154 Note, however, that this is ‘without prejudice’ to ordering the vessel concerned to alter its course or escorting it outside the territorial sea or contiguous zone of the Member State concerned, pursuant to MSR art 6(2)(b).
Coordination Centre to identify an appropriate ‘place of safety’—excluding ports in non-participating Member States, unless they consent.157

The MSR—based on the IMO Guidelines but codifying them into hard law for EU law purposes—provides that a ‘place of safety’ shall be a ‘location where rescue operations are considered to terminate and where the survivors’ safety of life is not threatened’; a place ‘where their basic human needs can be met’. Moreover, in accordance with human rights principles, it shall also be a location where protection and compliance with the principle of non-refoulement is guaranteed.158 Unlike the duty to rescue, non-refoulement ‘shall apply to all measures taken by Member States or the Agency’, making the EU Coastguard explicitly bound by attendant obligations.159

As a result, the MSR contemplates that interdicted or rescued persons cannot be ‘disembarked in’, nor can they be ‘forced to enter, conducted to or otherwise handed over to the authorities of’, a country where there are serious risks of being subjected to persecution or inhuman or degrading treatment or punishment, whether directly or by onward removal to another country.160 Therefore, when considering disembarkation in a third country, the prevailing situation there must be taken into account. Information derived from a wide range of sources is essential. It is, however, unclear what the significance of ‘the existence of agreements and projects on migration and asylum carried out in accordance with Union law and through Union funds’ may be in this assessment, but it is one of the factors contemplated in the MSR.161 Also, although the identification and assessment of personal identity and circumstances have to be undertaken before removal, and persons concerned informed of their destination so they can oppose it on refoulement grounds, there is no provision for procedural safeguards, remedies, or judicial oversight to guarantee compliance with the principle in practice.162 This contravenes human rights standards, as per Hirsi and related case law.163

As advanced as the MSR provisions may be in certain respects, particularly as they represent a regional arrangement followed by 28 Member States, they suffer from an additional key limitation. They apply only to EU Coastguard-coordinated operations and thus leave untouched any arrangements regarding unilateral action or collaborative conduct undertaken outside the Frontex framework. Arguably, these exclusions encompass the EUNAVFOR Med Operation Sophia and actions taken under the auspices of NATO, leaving an important gap in effective protection, considering developments on the ground—including non-assistance and abandonment at sea164—and the fact

that it remains disputed whether EU *non-refoulement* provisions have an extraterritorial reach beyond Member States’ domain.\(^{165}\)

There is currently no comparable regional agreement between Australia and its neighbours on the issue of disembarkation. As the *MV Pinar* and *MV Tampa* incidents demonstrate (see Part I), governments may be reluctant to permit the disembarkation of rescued asylum seekers into their territory and may attempt to deflect responsibility to other jurisdictions. This can create uncertainty and discourage commercial vessels from participating in SAR activities. It also prevents Australian Government vessels from carrying out SAR in Indonesian waters, as it could result in Australia having to assume responsibility for disembarkation. The importance of dealing with the disembarkation issue in the Asia-Pacific region was raised at the Sixth Ministerial Conference of the Bali Process on People Smuggling, Trafficking in Persons and related Transnational Crime held in March 2016. The Ministerial Declaration adopted at the conference recognizes the importance of coordinating procedures for rescue at sea and calls on participating governments to ‘work to identify more predictable disembarkation options’.\(^{166}\) But, to date, there have been no concrete proposals.

Australia has also had cause to contemplate disembarkation at a ‘place of safety’ and the extent to which this duty is affected by considerations of *non-refoulement*. Regardless of whether the purported basis of an interception is SAR or security-related maritime interdiction, under Australian law, once a vessel is under the control of Australian authorities, the Australian Government has a responsibility to deliver the rescuees to a ‘place of safety’.\(^{167}\) Recent actions by Australian authorities appear to flout this requirement. While the lack of transparency around push-back operations (elaborated upon in the next section) makes a definitive assessment difficult, it is hard to conceive how leaving migrant vessels on the edge of Indonesian territorial waters could be viewed as delivery to a ‘place of safety’.\(^{168}\) This is regardless of whether they are aboard their original vessel or have been transferred to lifeboats or other vessels provided by the Australian authorities. In both instances, the migrants are left to navigate a potentially perilous sea...
voyage on their own. Similar actions under Operation Relex, providing a point of comparison, reportedly resulted in loss of life.169

These actions have been possible because of the lack of a clear definition of ‘a place of safety’ in Australian law. Neither the National Search and Rescue Manual or the Maritime Powers Act refer to the specific circumstances of asylum seekers and the need to protect against refoulement. In fact, following the passage of Migration and Maritime Powers Legislation Amendment (Resolving the Asylum Legacy Caseload) Act 2014 (Cth) (‘Legacy Caseload Act’), consideration of such factors is explicitly prohibited in certain contexts.170 The amendments stipulate that when exercising maritime powers, an authorizing officer is not required to consider Australia’s international obligations or the international obligations or domestic law of another country.171 Additionally, the amendments stipulate that authorization of maritime powers under the Act is not invalid even if inconsistent with Australia’s international obligations.172 As such, there are no clear legal safeguards in place to ensure that Australia does not breach its non-refoulement obligations by returning a person to a place where they face persecution contrary to the Refugee Convention, or to a situation where they are in danger of death, torture, or other unlawful mistreatment.173

However, these amendments do not necessarily preclude an expansive interpretation of a ‘place of safety’ under the Maritime Powers Act (‘MPA’). The Legacy Caseload Act did not remove the requirement that a ‘maritime officer must not place … a person in a place, unless the officer is satisfied, on reasonable grounds, that it is safe for the person to be in that place’.174 The breadth of this requirement was addressed by a number of the justices of the Australian High Court in CPCF v MIBP. The case was brought on behalf of a Tamil plaintiff who was part of a group of 157 Sri Lankan asylum seekers intercepted and detained at sea by Australian authorities for almost one month. The challenge was dismissed, with a majority of the court finding the detention lawful under the Maritime Powers Act. The facts before the court did not give rise to any issues of refoulement (the asylum seekers had eventually been transferred to the Australian run Regional Processing Centre in Nauru). A number of the justices nevertheless indicated a willingness to interpret the meaning of a ‘place of safety’ broadly, as encompassing similar protections to the non-refoulement obligations of the Refugee Convention.

170 Legacy Caseload Act sch 1; this act was passed in response to the CPCF litigation examined below at (n 175) and accompanying text.
171 MPA section 22A(1)(a).
172 ibid 22A(1)(c).
173 Refugee Convention, art 33; ICCPR, art 7; CAT, art 3. For a comprehensive analysis, see K Wouters, International Legal Standards for the Protection from Refoulement (Intersentia 2009). More recently, see C Costello and M Foster, ‘Non-refoulement as Custom and Jus Cogens? Putting the Prohibition to the Test’ (2015) 46 NYIL 273.
and other human rights instruments.\textsuperscript{175} For example, Hayne and Bell JJ stated, in terms similar to French CJ, that:

\begin{quote}
[t]he reference in s 74 to a person being ‘safe’ in a place must be read as meaning safe from risk of physical harm. A decision-maker who considers whether he or she is satisfied, on reasonable grounds, that it is safe for a person to be in a place must ask and answer a different question from that inferentially imposed by the Refugees Convention. But there is a very considerable factual overlap between the two inquiries. Many who fear persecution for a Convention reason fear for their personal safety in their country of nationality.\textsuperscript{176}
\end{quote}

Kiefel J took a different approach, finding that section 74 only required that a point of disembarkation for a person is ‘in its immediate physical aspects … safe’.\textsuperscript{177} It did not require that a maritime officer be satisfied that the place is one in which the person will not face a real risk of harm more generally.\textsuperscript{178} As the matter was left unresolved, this is an issue that will no doubt be explored further in future litigation.

As things stand, there is currently no guarantee under Australian law of a reading of ‘delivery to a place of safety’ in line with the prohibition of \textit{refoulement}, while in Europe procedural safeguards are, in turn, insufficient to secure such result in practice. This arguably renders maritime operations in both regions legally unsustainable as currently practised.

\section*{C. Lack of Transparency and Accountability}

The securitization of SAR and its conflation with/subordination to security-related interdiction activities in Europe and Australia have resulted in a lack a transparency and accountability. This development, while unwelcome, is unsurprising because security operations are routinely shrouded in secrecy to avoid public scrutiny and the potential compromising of ‘successful’ operations.

In Australia, as noted above, \textit{Operation Sovereign Borders} operates under a veil of silence. The government has sought to justify its decision not to comment on ‘on-water operational matters’ on the ground of national security and because such disclosure would benefit ‘the people smugglers and their business model’.\textsuperscript{179} The secrecy has been extended to SAR operations. Since the commencement of the operation, AMSA has stopped posting shipping broadcasts requesting assistance on its website.\textsuperscript{180} Ships involved in SAR activities receive direct communication from the Rescue Coordination Centre, but details of the activities are not released to the public. This secrecy

\textsuperscript{175} \textit{CPCF v Minister for Immigration and Border Protection} (2015) 255 CLR 514.  
\textsuperscript{176} ibid [109], [12].  
\textsuperscript{177} ibid [296].  
\textsuperscript{178} ibid.  
\textsuperscript{180} A Lloyd, Senate Budget Estimates Briefing Note on AMSA’s Role in Search and Rescue Incidents, released in response to an FOI request from H Degan <https://www.righttoknow.org.au/request/operation_sovereign_borders>.  

\url{https://doi.org/10.1017/S0020589317000562}
makes it difficult to assess the extent to which Australian authorities are conforming to their obligations under the SAR regime, as well as under the Refugee Convention and human rights instruments.

Similar secrecy applies in recent EU interdiction activities carried out behind the shield of ‘EU security’.181 A recent application for disclosure of the Operational Plan and Evaluation Report of Frontex-led Operation Hera in the period 2012–2015 in Western Africa and around the Canary Islands, submitted in 2016 by the European Centre for Constitutional and Human Rights (ECCHR), provides a telling example. Frontex purported to justify its extensive redaction of the Operational Plan by reference to ‘public security’ considerations, including a list of potential fundamental rights violations within Frontex activities.182 The argument is particularly inappropriate because it impedes any meaningful accountability of the Agency.

In Europe, channels of democratic oversight exist, but remain weak.183 Since 2011, Frontex has been obliged to formulate and implement a (non-legally binding) Fundamental Rights Strategy to ensure that its operations fully respect fundamental rights.184 The European Parliament has exerted limited control through budgetary procedures.185 Moreover, the EBCG Regulation now provides that the EU Coastguard shall be accountable to the Parliament (art 7) and that, prior to appointment, the Executive Director of the Coastguard shall make a statement before the European Parliament, if requested, and ‘report to it regularly’ thereafter (art 68), which may improve the current opacity.

Nevertheless, for the time being, the information released to the public on Frontex or EU Coastguard activities tends to be superficial and incomplete. The structure of general reports was revised in 2008 and the level of detail noticeably decreased.186 According to the Agency, the purpose of general

185 See J Pollak and P Slominski, ‘Experimentalist but not Accountable Governance? The Role of Frontex in Managing the EU’s External Borders’ (2009) 32 WEurPol 904; According to Frontex Regulation (n 30), art 25(2), ‘the European Parliament or the Council may invite [her] to report on the carrying out of his/her tasks’ (emphasis added), but this has been interpreted as not entailing a legally-binding obligation to appear in person for the purpose.
reports is actually to provide ‘a broad overview of activities … and highlight individual operational … successes’,\(^\text{187}\) which leaves limited space for genuine external inspection. What is more, under the present Coastguard Regulation, ‘communication activities shall not be detrimental to [Coastguard] tasks’, which provides a basis for the Agency’s discretionary release of information, including selective redaction of documentation on vague security grounds, as the ECCHR case demonstrates.\(^\text{188}\)

It is the linkage between SAR with issues of migration control and border security, coupled with the absence of independent, comprehensive monitoring mechanisms\(^\text{189}\) that have allowed both the EU and Australia to diminish transparency of strategic decisions and on-water operations. The resulting reduction of the quality and opportunity for democratic oversight can thus be connected with an underlying securitization paradigm.

\section*{D. Cooperation and Commodification}

States are reluctant to engage in SAR operations involving boat migrants because of the responsibilities that may arise in relation to determining asylum applications, as exemplified by the second of our two rescue tales in Part I, the \textit{MV Pinar} incident. This concern is compounded by ambiguity surrounding key elements of the international SAR regime—in particular the meaning of ‘distress’, ‘place of safety’, and the selection of a point of disembarkation. The importance of this issue is widely acknowledged, but attempts to address it have fallen short to date.\(^\text{190}\) The 2004 SOLAS amendments require State parties to cooperate to ensure that masters are relieved of their obligations to assist ‘with minimum further deviation from the ship’s intended voyage’, but they do not go as far as mandating specific modalities for disembarkation.\(^\text{191}\) EU norms are more detailed and prescriptive, but only apply to EU Coastguard-led operations, as pointed out above. Their full development in terms of identification and referral protocols in line with SAR standards, international human rights and refugee law has not been achieved.

\(^{188}\) EBCGR art 8(3) cf art 74.

\(^{189}\) An initiative has been launched, drawing on the premises of the ‘comprehensive approach’ put forward in Moreno-Lax and Papastavridis (n 33), for the establishment of a Search and Rescue Observatory for the Mediterranean (SAROBMED), through the joint collaboration of SAR NGOs, academics, and other stakeholders, to collate and publicly disseminate data on SAR incidents and interdiction-related events, with a view to combatting the lack of transparency and accountability resulting from the securitized approach of the EU <http://www.law.qmul.ac.uk/events/items/death-at-sea-and-the-securitisation-of-search-and-rescue.html> and <https://sea-watch.org/en/report-of-death-at-sea-and-the-securitisation-of-search-and-rescue-on-29-09-2017-in-london/>.

\(^{190}\) For an elaboration regarding the Mediterranean basin, see J Coppens and E Somers, ‘Towards New Rules on Disembarkation of Persons Rescued at Sea?’ (2010) 25 IJMCL 377; See also J Coppens, ‘Disembarkation of Migrants Rescued at Sea’ (De Lloyd 29 December 2010) at 15 (Pt I), and 3 January 2011, at 55 (Pt II).

\(^{191}\) See (n 49–52) and related discussion.
In the absence of more detailed international rules, such as new IMO Guidelines or a further reform of the maritime conventions, it is up to individual States to enter into agreements with neighbouring countries as to how best to deal with this issue. Hitherto, such cooperation has not been forthcoming. While shiprider and similar agreements have been concluded for law-enforcement purposes,192 States appear to be unwilling to participate in any arrangement that would result in them assuming (greater or any) responsibilities for rescued boat migrants. Cooperation is viewed as a zero-sum game, resulting in some States reducing their obligations at the cost of others taking on a greater burden.193

Cooperation around law enforcement and securitization of borders may also be characterized as a zero-sum game. When States undertake actively to prevent the passage of boat migrants to another jurisdiction, they are in effect shifting the flow (and related responsibility) of those persons. However, States value such cooperation to the extent that they are willing to provide substantial payment or other inducements to partners.194 The reality is that saving lives does not have the same priority.

One can observe cooperation becoming commodified in this way in the Mediterranean,195 where the replacement of SAR with law enforcement and militarized border control efforts has become widespread. Some speak of a ‘world of cooperative deterrence’196 or the ‘rise of consensual containment’ in this regard,197 conceptualizing an ever-expanding trend that infringes the most basic rights of boat migrants.

The EU tends to avoid unilateral action. Rather, the organization—via the EU Coastguard, EUNAVFOR Med, and individual Member States—trades in trust, exchanging funds and assets for pull-backs and border-enforcement capacity of transit countries with cooperation in the containment of flows and the fight

---

192 See Papastavridis (n 49) 221, defining shiprider agreements as: ‘bilateral treaties … where each party is required to designate law enforcement officials to embark on the vessels of other parties in order to facilitate … the exercise of relevant national law enforcement powers within zones of jurisdiction of the former party’. See also Guilfoyle (n 91) ch 8.
193 On the lack of sufficient investment in SAR and post-SAR action, including poor implementation of internal relocation plans for refugees, see Guild, Costello and Moreno-Lax (n 118).
194 Note eg the promise by the EU to pay Turkey several billion Euros in the form of a Refugee Facility as part of their so-called ‘deal’ (n 20).
197 Moreno-Lax and Giuffré (n 22).
against unauthorized migration. The implementation of the EU-Turkey Statement, the Memorandum of Understanding with Libya, and the related partnership with NATO, analysed above, demonstrates this strategic, selective approach to multilateral trust and collaboration with neighbours in the region. The key drawback of this instrumentalization is its impact on SAR and human rights protection, which have been fundamentally distorted and made into a tool in the arsenal of the ‘war on smugglers’ across the Mediterranean.

Australia has achieved mixed results in enlisting the cooperation of neighbouring States in its interdiction and push-back operations. Sri Lanka has successfully been engaged to collaborate in joint interceptions and take-back procedures, as well as to disrupt refugee departures before they occur. Australia has provided equipment to Sri Lanka to assist them in carrying out these tasks, including two Bay Class patrol vessels gifted to the Sri Lankan navy. Cooperation has also been forthcoming from Vietnam, which has accepted returns of its nationals intercepted at sea en route to Australia. Australia’s relationship with Indonesia is somewhat more complicated. While the two nations have a long history of cooperating around border control issues, particularly through their role as joint chairs of the Bali Process on People Smuggling, Trafficking in Persons and Related Transnational Crime, Australia’s securitized approach to boat migration has eroded trust and placed significant strain on the relationship. So much so that Australian authorities unilaterally return boats to the edge of Indonesian territorial waters without consultation with, or approval from, the Indonesian Government. Relations have been further damaged by revelations that Australian Navy Customs vessels had repeatedly ventured into Indonesian waters.

199 Other examples include ad hoc agreements to allow EU Member States, particularly Spain, to intercept vessels in the territorial waters of North and West African nations such as Senegal and Mauritania: Papastavridis (n. 49) 287; Guilfoyle (n. 91) 218–19. 200 ‘Europe is Declaring War on Smugglers’ (n. 130).

waters without authorization as part of patrols relating to Operation Sovereign Borders, as well as allegations in 2015 that cash payments had been made by Australian authorities to induce Indonesian crew members of a migrant vessel to return to Indonesia. In both instances, the actions were viewed by Indonesia as a significant breach of its sovereignty and territorial integrity. This growing distrust has serious flow-on effects for the operation of SAR in the region, and makes reaching agreement on key issues like modalities of disembarkation all the more difficult.

Australia has had success in commodifying and outsourcing other elements of its international responsibilities, particularly where it has been unable to successfully push back asylum seekers at sea. Under Australian law, persons that attempt to reach Australia by boat are barred from applying for asylum or ever settling in Australia. They are instead transferred to facilities in Manus Island, PNG or Nauru, to have their protection claims assessed under the domestic laws of those countries. Cooperation from PNG and Nauru was secured through substantial cash inducements delivered through Australia’s aid programme, and payments covering the costs of building and running the detention centres where rescued/intercepted asylum seekers are placed on arrival. The facility on Manus Island was decommissioned on 31st October 2017, following a decision of the Supreme Court of PNG declaring the detention of asylum seekers illegal. But there are currently

210 Migration Act 1958 (Cth) section 46A; Under section 46A(2) the Minister has discretion to exempt an applicant in the public interest.

211 Memorandum of Understanding between the Republic of Nauru and the Commonwealth of Australia, relating to the Transfer to and Assessment of Persons in Nauru, and Related Issues, signed 3 August 2013; Regional Resettlement Arrangement between Australia and Papua New Guinea, signed 19 July 2013.

no plans to amend or rescind the arrangement with Nauru. Cambodia has also been recruited to resettle a handful of the refugees processed on Nauru. Only six have so far volunteered for the programme, and, of these, four decided instead to return to their home countries, citing unbearable living conditions.\(^{214}\) This has come at the cost of approximately AUD$55 million to the Australian government in additional aid and direct payment for resettlement services.\(^{215}\)

As in the case of the EU, the intention of these arrangements is to ‘outsource’ Australia’s international obligations with respect to refugees and migrants to poorer neighbours in the region.\(^{216}\) Both Australia and the EU seem to be under the impression that cooperation in this guise releases them of any international responsibility. Yet, in most cases, the States concerned will still be responsible under general customary law,\(^{217}\) either through exercising effective control (such as Australia’s direct involvement in offshore processing) or through complicity, direction, and/or control of internationally wrongful acts committed by the third country (as in the case of the EU and Italy’s support to pull-backs by Libya).\(^{218}\) What neither region appears to realize is that, pursuant to the *pacta sunt servanda* principle, ‘every treaty in force [eg the Refugee Convention or instruments of human rights law] is binding upon the parties to it and must be performed by them in good faith’.\(^{219}\) Once concluded, it may be denounced—if the text so allows—but cannot be ‘contracted out’ via subsequent (if cooperative) arrangements.\(^{220}\) In those circumstances, the very wording of the Vienna Convention on the Law of Treaties indicates that responsibility may arise for a State from the conclusion or application of a [subsequent] treaty [however named]\(^{221}\) the provisions of which are incompatible with its obligations towards another State under another [prior] treaty’.\(^{222}\) Otherwise, the opposite would mean that ‘the

guarantees of [eg refugee and human rights conventions] could be limited or excluded at will thereby depriving [them] of [their] peremptory character and … practical and effective nature …’. 223

E. Criminalization

The void left by official authorities, in terms of SAR coverage in the Mediterranean, has been filled by civil society organizations undertaking private rescues. Especially since the outbreak of the ‘crisis’ in 2015, several NGOs have been formed with the purpose of locating and assisting migrant boats in the Central Mediterranean and the Aegean Sea.224 Their intervention has very much changed the landscape, to the extent that they have been recorded to perform up to half of the total rescues undertaken.225 This, in turn, has been perceived to create a ‘call effect’ or ‘pull factor’, facilitating the deeds of human traffickers and migrant smugglers.226 Although Frontex has denied direct accusations,227 these have been reported by the press228 and have translated, at least on two occasions, on the pressing of charges against NGOs.229 Proemaid, a group of Spanish fire-fighters operating in Lesbos, has been accused of ‘attempted’ human trafficking under Greek law, and there is an open case against the German Jugend Rettet in Italy.230

Although the European Commission has denied any need to revise the Facilitators Directive to unambiguously decriminalize humanitarian

assistance under EU law, there is a solid consensus in the literature that the EU instrument is not in full alignment with the Smuggling Protocol, as it omits that for the perpetration of the crime of facilitation of irregular entry into a Member State there needs to be an economic gain—on top of a mens rea or criminal intent element and a link to organized transborder mafias. The travaux préparatoires make clear that the reference in the definition of migrant smuggling in Article 3 of the Protocol to ‘a financial or other material benefit’ was included precisely ‘to emphasize that the intention was to include the activities of organized criminal groups acting for profit, but to exclude the activities of those who provided support to migrants for humanitarian reasons’. The Protocol’s aim was not to punish NGOs.

By contrast with the EU situation, to date, there have been no NGO groups involved in active search and rescue missions targeting asylum seekers and migrants off Australia’s coast. If such operations were to take place, the crew of the NGO vessels may be liable for prosecution under Australia’s strict anti-people smuggling laws. First introduced in 1999, the anti-people smuggling provisions have progressively broadened in the intervening years. As in the EU, there is no requirement of ‘a financial or other material benefit’. All that is required is that a person ‘organises or facilitates’ the entry (or proposed entry) of a migrant who has no right to enter Australia. Where there are more than five migrants involved, this constitutes an aggravated offence with a penalty of up to 20 years imprisonment. Reforms introduced in 2011 make it clear that it is

immaterial whether Australia owes, or may owe, the migrants protection obligations under the Refugee Convention and Protocol, or other human rights instruments.241 Persons who donate money to NGOs involved in search and rescue of asylum seekers and migrants at sea may also face criminal charges for the offence of providing material support or resources to a person or organization involved in people smuggling.242 It may be possible, however, for those involved in humanitarian rescue to rely on the defence of ‘sudden and extraordinary emergency’, which is included in the Criminal Code Act 1995 (Cth).243 This defence will be successful where the accused can show that they were obliged to commit an offence by reason of some extraordinary emergency. It is arguable that rendering assistance to persons in distress at sea would meet this requirement.244 However, hitherto, this defence remains largely untested in Australian courts.245

The criminalization of people smuggling, and in particular the enactment of broad offences that go well beyond what is authorized and required under the Smuggling Protocol, are yet another manifestation of the securitization of SAR in the EU and Australia.

IV. CONCLUSION

The fundamental humanitarian purpose of SAR is under threat because of the securitization and, increasingly, the militarization and criminalization of boat migration. The practice of the European Coastguard and individual EU Member States, as well as Australia, demonstrates that the line between SAR and security-related interdiction has been increasingly blurred and manipulated. The Australian regime ostensibly intends to identify whether a vessel is one requiring a SAR response or is an instance of unlawful entry, and different agencies are mobilized accordingly. However, if an Australian asset is deployed for SAR, the operation falls under the Maritime Powers Act and secrecy requirements follow. In the EU, the Coastguard is primarily focused on border-enforcement operations, which have been increasingly securitized as a response to people smuggling and human trafficking. This characterization has been reinforced by Security Council Resolution 2240 (2015) and formal collaboration with EUNAVFOR Med Operation Sophia and NATO Sea Guardian patrols. In these examples, the SAR regime is either relegated or merged into a law-enforcement response to people smuggling. Instead, the critical task of identifying a vessel in distress should be the catalyst for

241 Deterring People Smuggling Act 2011 (Cth)
242 Migration Act 1958 (Cth) section 233D; Criminal Code Act 1995 (Cth) section 73.3A.
243 Criminal Code Act 1995 (Cth) section 10.3.
244 This position would be consistent with the supplementary and interpretive material to the Smuggling Protocol which makes it clear that those engaging in humanitarian assistance should be exempt from criminal liability; see (n 235) and accompanying text.
245 Schloenhardt and Craig (n 237).
determining whether the response should be directed through the SAR regime or whether the vessel should be subjected to an interdiction measure for migration control purposes.

Securitization is also eroding the spirit of cooperation that is so essential to the effectiveness of the SAR regime. Rescues at sea often involve authorities from multiple jurisdictions. It is common for a rescue to be carried out by a merchant vessel flagged in State A, coordinated by authorities from State B, and end with disembarkation in State C. Any perception that one or more of the parties may not carry out their respective obligations in good faith is a disincentive for the other parties involved. Securitization of SAR in one jurisdiction can also place pressure on other jurisdictions to follow suit. This is the result of a perception that a robust SAR apparatus may act as a ‘pull factor’ for boat migrants, despite evidence denying such effect.246 Hence, there is a risk of a ‘race to the bottom’ as States prioritize security over saving lives at sea in a bid to divert irregular migrant flows to other jurisdictions.247 This situation underscores the need to recover the humanitarian essence of SAR and shed the regime of its securitized and militarized connotations. SAR should be understood as an end in itself, not as a means to prevent irregular migration at the service of anti-smuggling strategies.

At least since the Corfu Channel case, it has been known that ‘elementary considerations of humanity’ still adhere in situations of high security concern, particularly where human lives are at stake.248 In adopting a securitization frame for responding to boat migration, States still retain core responsibilities in how they carry out law enforcement operations. In particular, the International Tribunal for the Law of the Sea has recognized that considerations of humanity apply in the law of the sea, and even law enforcement operations must not travel beyond what is a reasonable and proportionate use of force.249 These standards must be borne in mind in the type of actions taken in response to boat migration. In the treatment of boat migrants, States must recall that they ‘are required to fulfil their obligations under international law, in particular human rights law, and that considerations of due process of law must be applied in all circumstances’250

249 The M/V ‘SAIGA’ (No. 2) Case (Saint Vincent and the Grenadines v Guinea) (Judgment of 1 July 1999) ITLOS Reports 1999 [155]; see also The Arctic Sunrise Arbitration (Netherlands v Russia) (Merits), PCA Case No 2014-02 (UNCLOS Annex VII Arb Trib, 14 August 2015), [197]–[198] (where the Tribunal found that international human rights law can be considered when determining what is a reasonable and proportionate use of force). See Guilfoyle (n 91) 271–2 for an analysis of the interpretation of ‘disproportionate force’ in this context.
250 The M/V ‘Louisa’ Case (Saint Vincent and the Grenadines v Kingdom of Spain) (Judgment of 28 May 2013) ITLOS Reports 2013 [155].
It is important to remember that the SAR regime is just one of a number of overlapping international legal regimes governing the power of States to deal with boat migrants at sea. Refugee law, international human rights law, the law of the sea, and the human smuggling and trafficking frameworks are all relevant in this regard. States often deal with these regimes in a fragmented manner, cherry picking provisions that allow them to justify a securitized approach to protect State interests. Further research on how these regimes intersect, and how they can be integrated in a mutually reinforcing way, may provide the key to recovering the humanitarian dimension of SAR. In such a conception, the obligations of humanity extended to those in peril at sea would be blind as to their identity as lone yachtsmen from the developed world or ‘huddled masses yearning to breathe free’.
