Contents

Meta-analysis
Energy requirements of adult cats.
E. N. Bermingham, D. G. Thomas, P. J. Morris & A. J. Hawthorne 1083–1093

Short Communication
Berries modify the postprandial plasma glucose response to sucrose in healthy subjects.

Increased meal frequency does not promote greater weight loss in subjects who were prescribed an 8-week equi-energetic energy-restricted diet.
J. D. Cameron, M.-J. Cyr & É. Doucet 1098–1101

Molecular Nutrition
Ellagic acid inhibits lipopolysaccharide-induced expression of enzymes involved in the synthesis of prostaglandin E2 in human monocytes.
S. Karlsson, E. Nánberg, C. Fjaeraa & J. Wijkander 1102–1109

Grape antioxidant dietary fibre reduced apoptosis and induced a pro-reducing shift in the glutathione redox state of the rat proximal colonic mucosa.
M. E. López-Oliva, A. Agis-Torres, I. Gotti & E. Muñoz-Martínez 1110–1117

Metabolism and Metabolic Studies
Native and microwaved bean and pea starch preparations: physiological effects on the intestinal ecosystem, carceral tissue and serum lipids in rats.

Metabolite fingerprinting of urine suggests breed-specific dietary metabolism differences in domestic dogs.
M. Beckmann, D. P. Enot, D. P. Overby, I. M. Scott, P. G. Jones, D. Allanaw & J. Draper 1127–1138

Effects of exercise on t-lysine and lipid metabolism in African catfish (Clarias gariepinus) fed different dietary L-lysine and lipid levels.

Human and Clinical Nutrition
Combined effects of endurance training and dietary unsaturated fatty acids on physical performance, fat oxidation and insulin sensitivity.
A. Boss, V. Lecoultre, C. Ruffieux, L. Tappy & P. Schneiter 1151–1159

The fatty acid compositions of erythrocyte and plasma polar lipids in children with autism, development delay or typically developing controls and the effect of fish oil intake.
J. G. Bell, D. Miller, D. J. MacDonald, E. E. MacKinlay, J. R. Dick, S. Cheseldine, R. M. Boyle, C. Graham & A. E. O’Hare 1160–1167

Moderate Champagne consumption promotes an acute improvement in acute endothelium-independent vascular function in healthy human volunteers.

Dietary antioxidant restriction affects the inflammatory response in athletes.
B. A. Plunkett, R. Callister, T. A. Watson & M. L. Garg 1179–1184

Diet-induced acidosis: is it real and clinically relevant?

Dietary Surveys and Nutritional Epidemiology
Lifestyle and genetic determinants of folate and vitamin B12 levels in a general adult population.

Sex differences among Swedish adolescents in mother−child relationships in the intake of different food groups.
K. Nilsson 1205–1211

(Contents continued facing inside back cover)
The British Journal of Nutrition is an international, peer-reviewed journal publishing original papers, review articles, short communications and technical notes on human and clinical nutrition, animal nutrition and basic science as applied to nutrition. Correspondence is encouraged in a Nutrition Discussion Forum. The Journal recognises the multidisciplinary nature of nutritional science and encourages the submission of material from all of the specialties involved in research and clinical practice. The Journal also publishes supplements on topics of particular interest.

The British Journal of Nutrition is published twice monthly by Cambridge University Press on behalf of The Nutrition Society.

Aims and Scope

The Journal encourages contributions that will advance the science of nutrition, and support nutrition education, and for the development of dietary advice and policy. The Journal aims to be tuned to the key topics within the rapidly changing nutrition research field, and to cover all aspects of nutrition, whether experimental, clinical, agricultural or statistical, such work has been in the laboratory, the field or the clinic, and whether experimental, clinical, agricultural or statistical in nature. There is also a student membership scheme with reduced subscriptions.

The Journal is an international journal publishing papers, reviews, articles, technical notes and short communications in English in all branches of nutritional science. Prospective authors should note that they (or their institutions) now retain the copyright of their material published in the British Journal of Nutrition. As a contributor you are asked to follow the guidelines set out below. For detailed information on the presentation of the technical content of your paper please see the full version of the Directions to Contributors, which can be downloaded from the Nutrition Society website (http://www.nutritionssociety.org). Prospective authors wishing to contact the Publications Office directly on + 44 (0)20 7606 6559 (telephone), +44 20 7602 1756 (fax), or edoffice@nutsoc.org.uk (email).

Papers should be accompanied by a statement to the effect that the conditions laid down in the full Directions to Contributors are accepted. The statement should affirm that the submission represents original work that has not been published previously and which is not currently being considered by another journal. It should also confirm that each author has seen and approved the contents of the submitted paper. At the time of acceptance the authors should provide a completed copy of the Licence to Publish (in favo of Editor right trans). The Licence to Publish is available on the Nutrition Society website (http://www.nutritionssociety.org). All relevant financial interests should be declared.

Text. Papers should be submitted with 1.5 line spacing and margins of at least 2 cm on each side. Text should be printed without underlining, bold or italics (except for scientific names).

Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g. ‘The conceptual difficulty of this approach has recently been highlighted (9).’ If a reference is cited more than once the number should be used each time.

Proofs. PDF page proofs will be emailed to authors for checking, and should be returned within 3 days by fax or Express mail to the Publications Office directly on +44 (0)20 7602 0228, Fax: +44 (0)20 7602 1756, Email: office@nutsoc.org.uk. Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g. ‘The conceptual difficulty of this approach has recently been highlighted (9).’ If a reference is cited more than once the number should be used each time.

References. Authors are asked to submit the names of up to four referees who would be well qualified to review the paper; however, no more than one such reviewer will be used. The email addresses and institutions of the named referees should be given.

Typescripts. The British Journal of Nutrition operates an on-line submission and reviewing system (eJournalPress). Authors should submit to the following address:

Professor Philip Calder
Editor-in-Chief
British Journal of Nutrition
The Nutrition Society
10 Cambridge Court
Edinburgh Building, Shaftesbury Road,
Cambridge CB2 2RU, UK;
fax: +44 1223 325802, email: ejournal@cambridge.org

Note that authors will be charged 350 GBP for the publication of colour figures. Authors from countries entitled to free journal access through HINARI will be exempt from these charges.

Contents

Meta-analysis
Energy requirements of adult cats.
E. N. Bermingham, D. G. Thomas, P. J. Morris & A. J. Hawthorne
1083–1093

Short Communication
Berries modify the postprandial plasma glucose response to sucrose in healthy subjects.
R. Törönen, E. Sarkkinen, N. Tapola, E. Hautaniemi, K. Kilpi & L. Niskanen
1094–1097
Increased meal frequency does not promote greater weight loss in subjects who were prescribed an 8-week equi-energetic energy-restricted diet.
J. D. Cameron, M.-J. Cyr & E. Doucet
1098–1101

Molecular Nutrition
Ellagic acid inhibits lipopolysaccharide-induced expression of enzymes involved in the synthesis of prostaglandin E2 in human monocytes.
S. Karlsson, E. Nändberg, C. Fjaeraa & J. Wijkander
1102–1109
Grape antioxidant dietary fibre reduced apoptosis and induced a pro-reducing shift in the glutathione redox state of the rat proximal colonic mucosa.
M. E. López-Oliva, A. Agis-Torres, I. Goñi & E. Muñoz-Martínez
1110–1117

Metabolism and Metabolic Studies
Native and microwaved bean and pea starch preparations: physiological effects on the intestinal ecosystem, caecal tissue and serum lipids in rats.
1118–1126
Metabolite fingerprinting of urine suggests breed-specific dietary metabolism differences in domestic dogs.
M. Beckmann, D. P. Enot, D. P. Overy, I. M. Scott, P. G. Jones, D. Allaway & J. Draper
1127–1138
Effects of exercise on l-carnitine and lipid metabolism in African catfish (Clarias gariepinus) fed different dietary l-carnitine and lipid levels.
1139–1150

Human and Clinical Nutrition
Combined effects of endurance training and dietary unsaturated fatty acids on physical performance, fat oxidation and insulin sensitivity.
A. Boss, V. Lecouttre, C. Ruffieux, L. Tappy & P. Schneiter
1151–1159
The fatty acid compositions of erythrocyte and plasma polar lipids in children with autism, developmental delay or typically developing controls and the effect of fish oil intake.
J. G. Bell, D. Miller, D. J. MacDonald, E. E. MacKinlay, J. R. Dick, S. Cheseldine, R. M. Boyle, C. Graham & A. E. O’Hare
1160–1167
Moderate Champagne consumption promotes an acute improvement in acute endothelial-independent vascular function in healthy human volunteers.
1168–1178
Dietary antioxidant restriction affects the inflammatory response in athletes.
B. A. Plunkett, R. Callister, T. A. Watson & M. L. Garg
1179–1184
Diet-induced acidosis: is it real and clinically relevant?
J. Pizzorno, L. A. Frassetto & J. Katzinger
1185–1194

Dietary Surveys and Nutritional Epidemiology
Lifestyle and genetic determinants of folate and vitamin B12 levels in a general adult population.
1195–1204
Sex differences among Swedish adolescents in mother–child relationships in the intake of different food groups.
K. Vägström
1205–1211
Behaviour, Appetite and Obesity

Oat β-glucan supplementation does not enhance the effectiveness of an energy-restricted diet in overweight women.

Diet quality and obesity in women: the Framingham Nutrition Studies.

Anthropometric, metabolic, psychosocial and dietary factors associated with dropout in overweight and obese postmenopausal women engaged in a 6-month weight loss programme: a MONET study.
