

CAMBRIDGE

Titles in Robotics from Cambridge University Press!

Security and Game Theory

Algorithms, Deployed Systems, Lessons Learned

MILIND TAMBE

\$70.00: Hb: 978-1-107-09642-4: 328 pp.

Neuromorphic and Brain-Based Robots

JEFFREY KRICHMAR,
HIROAKI WAGATSUMA

\$110.00: Hb: 978-0-521-76878-8: 368 pp.

Computational Logic and Human Thinking

How to be Artificially Intelligent

ROBERT KOWALSKI

\$110.00: Hb: 978-0-521-19482-2: 336 pp.

\$46.00: Pb: 978-0-521-12336-5

Face-to-Face Communication over the Internet

Emotions in a Web of Culture, Language, and Technology

Edited by ARVID KAPPAS,
NICOLE C. KRÄMER

Studies in Emotion and Social Interaction

\$99.00: Hb: 978-0-521-85383-5: 316 pp.

\$38.99: Pb: 978-0-521-61997-4

Basic Electronics for Scientists and Engineers

DENNIS L. EGGLESTON

\$120.00: Hb: 978-0-521-76970-9: 266 pp.

\$65.00: Pb: 978-0-521-15430-7

Machine Ethics

Edited by

MICHAEL ANDERSON,
SUSAN LEIGH ANDERSON

\$99.00: Hb: 978-0-521-11235-2: 546 pp.

Multibiometrics for Human Identification

Edited by BIR BHANU,
VENU GOVINDARAJU

\$90.00: Hb: 978-0-521-11596-4: 408 pp.

Face Geometry and Appearance Modeling Concepts and Applications

ZICHENG LIU,
ZHENGYOU ZHANG

\$80.00: Hb: 978-0-521-89841-6: 314 pp.

Graph-based Natural Language Processing and Information Retrieval

RADA F. MIHALCEA,
DRAGOMIR R. RADEV

\$65.00: Hb: 978-0-521-89613-9: 208 pp.

Prices subject to change.

AI EDAM

Editor

David C. Brown, *Worcester Polytechnic Institute, USA*

AI EDAM is a journal for engineers and designers who see AI technologies as powerful means for solving difficult engineering problems; and for researchers in AI and computer science who are interested in applications of AI and in the theoretical issues that arise from such applications. The journal publishes original articles about significant theory and applications based on the most up-to-date research in all branches and phases of engineering. Suitable topics include: analysis and evaluation; selection; configuration and design; manufacturing and assembly; and concurrent engineering.

The Knowledge Engineering Review

Editors-in-Chief

Peter McBurney, *University of Liverpool, UK*

Simon Parsons, *Brooklyn College, City University of New York, USA*

The Knowledge Engineering Review is committed to the development of the field of artificial intelligence and the clarification and dissemination of its methods and concepts. *KER* publishes analyses – high quality surveys providing balanced but critical presentations of the primary concepts in an area; technical tutorials – detailed introductions to an area; application and country surveys commentaries and debates; book reviews; and a popular ‘from the journals’ section, providing the contents of current journals in theoretical and applied artificial intelligence.

Combinatorics, Probability and Computing

Editor-in-Chief

Béla Bollobás, *DPMMS, Cambridge, UK; University of Memphis, USA*

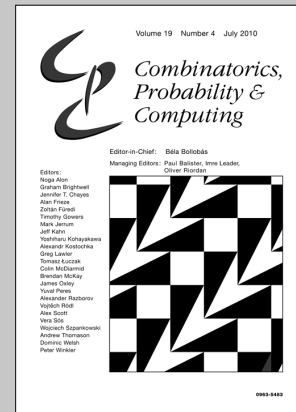

Published bimonthly, *Combinatorics, Probability & Computing* is devoted to the three areas of combinatorics, probability theory and theoretical computer science. Topics covered include classical and algebraic graph theory, extremal set theory, matroid theory, probabilistic methods and random combinatorial structures; combinatorial probability and limit theorems for random combinatorial structures; the theory of algorithms (including complexity theory), randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

Journal of Functional Programming

Editors-in-Chief

Matthias Felleisen, *Northeastern University, USA*

Xavier Leroy, *INRIA Rocquencourt, France*

The *Journal of Functional Programming* is the only journal devoted solely to the design, implementation, and application of functional programming languages, spanning the range from mathematical theory to industrial practice. Topics covered include functional languages and extensions, implementation techniques, reasoning and proof, program transformation and synthesis, type systems, type theory, language-based security, memory management, parallelism and applications. The journal is of interest to computer scientists, software engineers, programming language researchers and mathematicians interested in the logical foundations of programming.

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (gregc@jhu.edu) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume 29 Part 6 October 2011

| | |
|--|-----|
| 3D simultaneous localization and mapping using IMU and its observability analysis, Farhad Aghili | 805 |
| Solving stiffness and deformation of a 3-UPU parallel manipulator with one translation and two rotations, Bo Hu and Yi Lu | 815 |
| Experimental verification of soft-robot gaits evolved using a lumped dynamic model, Frank Saunders, Ethan Golden, Robert D. White and Jason Rife | 823 |
| Parametric excitation-based inverse bending gait generation, Yuji Harata, Fumihiko Asano, Kouichi Taji and Yoji Uno | 831 |
| A Chinese cooking robot for elderly and disabled people, Wen-Tao Ma, Wei-Xin Yan, Zhuang Fu and Yan-Zheng Zhao | 843 |
| A symmetric parallel Schönflies-motion manipulator for pick-and-place operations, O. Altuzarra, B. Şandru, Ch. Pinto and V. Petuya | 853 |
| Trajectory tracking compensation for teleoperation with transmission delays, Lingyan Hu, Xiaoping P. Liu, Guoping Liu and Shaoping Xu | 863 |
| Experiences in the development of a teleoperated parallel robot for aerial line maintenance, Cecilia Garcia, Roque Saltaren and Rafael Aracil | 873 |
| A novel dynamic walker with heel, ankle, and toe rocker motions, R. Prasanth Kumar, Abdullah Özer, Gabsoon Kim and Jungwon Yoon | 883 |
| Type synthesis of parallel mechanisms having the first class G_F sets and one- dimensional rotation, Jialun Yang, Feng Gao, Qiaode Jeffrey Ge, Xianchao Zhao, Weizhong Guo and Zhenlin Jin | 895 |
| Driving force analysis for the secondary adjustable system in FAST, Zhu-Feng Shao, Xiaoqiang Tang, Xu Chen and Li-Ping Wang | 903 |
| Robot accuracy evaluation using a ball-bar link system, Yeon Taek Oh | 917 |
| PID and inverse-model-based control of a twin rotor system, S. F. Toha and M. O. Tokhi | 929 |
| Heuristic control of bipedal running: steady-state and accelerated, A. D. Perkins, K. J. Waldron and P. J. Csonka | 939 |
| A new approach on human-robot collaboration with humanoid robot RH-2, C. A. Monje, P. Pierro and C. Balaguer | 949 |
