Increased intake of vegetable- and rich in n-6 PUFAs enhances allergic symptoms and provokes oral tolerance induction in whey-allergic mice.

Metabolomics

Influence of galacto-oligosaccharide mixture (B-GOS) on gut microbiota, immune parameters and metabolomics in elderly persons.

Human and Clinical Nutrition

A comparison of plasma and preprandial leucocytes in response to typical servings of tomato soup, sauce or juice in men before postmenarche.

Dietary Survey and Nutritional Epidemiology

Whole-grain products and whole-grain types are associated with lower all-cause and cause-specific mortality in the Scandinavian HELGA cohort.

R. F. Hurrell, P. D. Cotter & K. N. Nilaweera

Invited Commentary

Dietary Survey and Nutritional Epidemiology

Threonine affects digestion capacity and hepatopancreatic gene expression of juvenile blunt snout bream (Megalobrama amblycephala).

K. Uenishi & the Japan Dietetic Students’ Study for Nutrition and Biomarkers Group

Human and Clinical Nutrition

Whole-grain products and whole-grain types are associated with lower all-cause and cause-specific mortality in the Scandinavian HELGA cohort.
