INDEX FOR VOLUME 148

	PAGE
Aluffi, P. Chern classes of blow-ups	227
Baader, S. Unknotting sequences for torus knots	111
Bartel, A. Large Selmer groups over number fields	73
Bergweiler, W. & Karpińska, B. On the Hausdorff dimension of the Julia set of a regularly growing entire function	531
Biswas, I., Gómez, T. & Muñoz, V. Torelli theorem for the moduli space of framed bundles	409
Bridges, T. J., Hydon, P. E. & Lawson, J. K. Multisymplectic structures and the variational bicomplex	159
Christopoulos, C. & McKee, J. Galois theory of Salem polynomials	47
Cutkosky, S. D., Herzog, J. & Srinivasan, H. Asymptotic growth of algebras associated to powers of ideals	55
Dilworth, S. J., Odell, E., Schlumprecht, Th. & Zsák, A. On the convergence of greedy algorithms for initial segments of the Haar basis	519
Dunajski, M. & Tod, P. Four-dimensional metrics conformal to Kähler	485
Dutertre, N. Radial index and Poincaré–Hopf index of 1-forms on semi-analytic sets	297
Fan, A.–H., Liao, L. & Ma, J.–H. On the frequency of partial quotients of regular continued fractions	179
Fernández-Unzueta, M. & Prieto, Á. Extension of polynomials defined on subspaces	505
Graham, C. C. & Hare, K. E. Sets of zero discrete harmonic density	253
Groves, J. R. J. & Kochloukova, D. H. Nilpotent-by-abelian Lie algebras of type FP_m	429
Hasegawa, M. & Katsumata, S.-Y. A note on the biadjunction between 2-categories of traced monoidal categories and tortile monoidal categories	107
Heath-Brown, D. R. Pair correlation for fractional parts of αn^2	385
Hidalgo, R. A. & Maskit, B. Fixed points of imaginary reflections on hyperbolic handlebodies	135
Hung, N. H. V. & Quỳnh, V. T. N. The squaring operation on \mathcal{A} -generators of the Dickson algebra	267
Korkmaz, M. & Papadopoulos, A. On the arc and curve complex of a surface	473
Kurasov, P. Inverse problems for Aharonov–Bohm rings	331
Lafont, J.-F., Magurn, B. A. & Ortiz, I. J. Lower algebraic K -theory of certain reflection groups	193
Lazar, A. J. The space of ideals in the minimal tensor product of C^* -algebras	243
Llibre, J., Mereu, A. C. & Teixeira, M. A. Limit cycles of the generalized polynomial Liénard differential equations.	363
Maclachlan, C. & Rosenberger, G. Commensurability classes of arithmetic Fuchsian surface groups of genus 2	117
Meilhan, J.–B. & Yasuhara, A. Characterization of finite type string link invariants of degree < 5	439
Mihailescu, E. Metric properties of some fractal sets and applications of inverse pressure	553
Nuccio, F. A. E. Cyclotomic units and class groups in \mathbb{Z}_p -extensions of real abelian fields	93
Trofimov, V. I. Supplement to “The group $E_6(q)$ and graphs with a locally linear group of automorphisms” by V. I. Trofimov and R. M. Weiss	33
Trofimov, V. I. & Weiss, R. M. The group $E_6(q)$ and graphs with a locally linear group of automorphisms	1
Wilson, R. A. A new approach to the Suzuki groups	425
Wilson, R. A. On the compact real form of the Lie algebra \mathfrak{g}_2	87
Wong, H. $SO(3)$ quantum invariants are dense	289

INSTRUCTIONS TO AUTHORS

1. Preparation of Manuscripts

Two clear paper copies should be sent. Alternatively, a paper may also be submitted electronically to mpeditor@hermes.cam.ac.uk in pdf form together with the TeX file as attachment to an e-mail, i.e. not in the body of the e-mail. Authors are strongly encouraged to prepare their manuscripts in LaTeX 2 ϵ using the PSP class file. The class file, together with a guide, PSP2 ϵ gui.tex, and sample pages, PSP2 ϵ esam.tex, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/psp-cls> in either packed or unpacked form. These files will be updated periodically: please ensure that you have the latest version.

Papers produced in the recommended way can be printed directly from author-prepared electronic files: this substantially reduces errors at the printers. While the use of the PSP class file is preferred, other LaTeX or plain TeX files are also acceptable. In case standard electronic preparation is impossible papers may be typed, double-spaced, on one side of white paper (of which A4, 210 by 297mm is a suitable size). The pages must be numbered. Margins of 30mm should be left at the side and bottom of each page.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance n sub k is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; l , 1 ; ϵ , k , κ , k .

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit \square from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value ...)

In making references precise use [3, theorem 5.1]

3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred over columns.

5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

[1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.

[2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. *In Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.

[3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).

[4] F. W. LAWVERE. Functional semantics of algebraic theories. PhD. thesis. Columbia University (1963).

6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.
