Oryx -- The International Journal of Conservation
is a quarterly peer-reviewed journal of biodiversity conservation, conservation policy and sustainable use, and the interaction of these subjects with social, economic and political issues. The journal has a particular interest in material that has the potential to improve conservation management and practice, supports the publishing and communication aspirations of conservation researchers and practitioners worldwide and helps build capacity for conservation. Besides articles and short communications, Oryx regularly publishes reviews, forum sections and letters, and every issue includes comprehensive reporting of international conservation news.

Parasitology is an important specialist journal covering the latest advances in the subject. It publishes original research and review papers on all aspects of parasitology and host-parasite relationships, including the latest discoveries in parasite biochemistry, molecular biology and genetics, ecology and epidemiology in the context of the biological, medical and veterinary sciences. Included in the subscription price are two special issues which contain reviews of current hot topics in parasitology, one of which is the proceedings of the annual Symposium of the British Society for Parasitology, while the second, covering areas of significant topical interest, is commissioned by the editors and the editorial board.

The Canadian Entomologist

Published on behalf of the Entomological Society of Canada

Editor-in-Chief
Christopher M. Buddle, McGill University, Quebec, Canada

Published since 1868, this peer-reviewed bimonthly publication is the official journal of the Entomological Society of Canada. Available via the internet and with hardcopy distribution to 55 countries, its research papers and notes are relevant to entomologists and other biologists around the world. In addition to being a venue for topical reviews and forum discussion, The Canadian Entomologist publishes current research in all facets of entomology, including systematics and morphology, molecular and developmental biology, ecology and behaviour, biodiversity and evolution, insect management, entomological techniques, and other relevant subject areas. Contributions are published in English or French and include abstracts in both languages.

Aims and Scope

Established in 1910, the internationally recognized Bulletin of Entomological Research aims to further global entomology in the generalization of research findings rather than providing more entomological exceptions. The Bulletin publishes high quality and original research papers, critiques and reviews articles concerning insects or other arthropods of economic importance in agriculture, forestry, stored products, biological control, medicine, animal health and natural resource management. The scope of papers addresses the biology, ecology, behaviour, physiology and systematics of individuals and populations, with a particular emphasis upon the major current and emerging pests of agriculture, horticulture and forestry, and vectors of human and animal diseases. This includes the interactions between species (plants, hosts for parasites, natural enemies and whole communities), novel methodological developments, including molecular biology, in an applied context. The Bulletin does not publish the results of pesticide testing or traditional taxonomic revisions.

Bulletin of Entomological Research is published bimonthly by Cambridge University Press

Stylistic Notes

Manuscripts should be submitted in Microsoft Word or similar software according to the following structure:

The text, divided under appropriate headings. Clearly differentiate between primary (bold, large font size), secondary (bold, text font size) and tertiary (italics) headings.

Acknowledgements (if any)

References (if further information about presenting references, please see below).

Tables, either at the end of the manuscript or as separate files. Tables should be numbered consecutively with Arabic numerals and each table should be mentioned at least once in the text.

Illustrations should be submitted as separate files in TIFF or EPS format but captions should be listed at the end of the manuscript text.

Abstract

Each paper must commence with an accurate, informative abstract. It should not exceed 250 words. A short title should also be provided for use as a running head.

References

References must be based on the name and year system, give full journal titles and conform to the following styles:

Journal paper:

References should be ordered at proof stage.

Illustrations

Illustrations should be submitted in TIF or EPS format at 300dpi. Comprehensive guidance on creating suitable electronic figures is available at http://dx.sheridan.com/guidelines/digital.html where you will find extensive guidelines on preparing electronic figures. An online proofing tool (http://dx.sheridan.com/guidelines/digital.html) is also available where you can check if your figures are suitable for reproduction. Captions should be listed at the end of the manuscript text.

Supplementary Material

Additional information which due to its nature does not lend itself to print media (examples- full data sets, movie or sounds files etc.) may be submitted for online-only publication. Please see full details (“Instructions for Contributors”) at journals.cambridge.org/ber.

Technical and Nomenclature Standards

All work should use SI units as standard. Anatomical terms can be a mixture of the English vernacular and Latin, depending on current usage.

Manuscript Preparation

We kindly ask that you follow the instructions below when preparing your manuscript for submission. This will minimize the risk of errors being introduced during the publishing process.

Do not underline anything.

Number each line consecutively across the pages of the manuscript, rather than within pages.

Number every page (preferably the top right corner).

Do not indent the start of each paragraph.

Use double-line spacing and ample margins (at least 2.5cm) on each side.

Manuscript Submission

All manuscripts should be submitted via our online system, Editorial Manager, at http://www.editorialmanager.com/ber. New users will need to register first.

Peer review

Communications for peer review will be by email as far as possible. Authors are invited to suggest the names and contact details of at least two potential referees and are asked to provide keywords indicating the content of the manuscript. Please also give a brief description (no more than 50 words) of why the manuscript is an important contribution to entomology research.

Copyright

Authors will be supplied with an agreement to publish form, which must be completed and returned to the Publisher. Papers are accepted on the understanding that the work has been submitted exclusively to the Bulletin and has not been previously published elsewhere.

Authors will receive a PDF file of page proofs by email, and will be asked to return corrected proofs within 72 hours.

Offprint

The author (or main author) of an accepted paper will receive a free PDF of their paper. Paper offprints are available for a fee and should be ordered at proof stage.
Research Papers

A.M. Dinis, J.A. Pereira, J. Benhadi-Marín and S.A.P. Santos
Feeding preferences and functional responses of Calathus granatensis and Pterostichus globosus (Coleoptera: Carabidae) on pupae of Bactrocera oleae (Diptera: Tephritidae) 701

T.T.A. Luong, S.J. Downes, B. Cribb, L.E. Perkins and M.P. Zalucki
Oviposition site selection and survival of susceptible and resistant larvae of Helicoverpa armigera (Lepidoptera: Noctuidae) in China 718

J.F. Liu, I. Martínez-Sainudo, I. Mazzen, C.S. Prabhakar, V. Girolami, Y.L. Deng, Y. Dai and Z.H. Li
Bacterial communities associated with invasive populations of Bactrocera dorsalis (Diptera: Tephritidae) in China 718

O.S. Kostromytska and A.M. Koppenhöfer
Responses of Paspalum annuum and three bermgrass species (Agrostis spp.) to adult and larval feeding of annual bluegrass weevil, Listronotus maculicollis (Coleoptera: Curculionidae) 729

X.-X. Zhao, X.-W. Fu, A. Ali, K. Wilson and K.-M. Wu
Is Heliothris virescens (Lepidoptera: Noctuidae) a long-distance migrant? 740

I. Ste Hassan, I.H. Ravelosson-Ravasanarivo, H. Delatte, F. Chiroleu, A. Allibert, S. Noubou, S. Quilici and P.F. Duzy
Invasion by Bactrocera dorsalis and niche partitioning among tephritid species in Comoros 749

G. Burgio, E. Marchesini, N. Reggiani, G. Montepasie, P. Schiatti and D. Sommaggio
Habitat management of organic vineyard in Northern Italy: the role of cover plants management on arthropod functional biodiversity 759

Z.H. Liao, T.C. Kuo, C.H. Kao, T.M. Chou, Y.H. Kao and R.N. Huang
Identification of the chitinase genes from the diamondback moth, Plutella xylostella 769

X. Sun, Z.-F. Zhao, F.-F. Zeng, A. Zhang, Z.-X. Lu and M.-Q. Wang
Functional characterization of a phenomime-binding protein from rice leaffolder Cnaphalocrocis medinalis in detecting pheromones and host plant volatiles 781

An automic defense from Plutella xylostella with potential against Bacillus thuringiensis 790

J. Barrera-SanMartin, C.C. Figueroa and C.C. Ramirez
Evidence of plastic probing behavior in a ‘superclone’ of the grain aphid Sitobion avenae 801

M.-A. Badnah, A.-X. Zhu and X.-D. Liu
Host choice, settling and folding leaf behaviors of the larval rice leaf folder under heat stress 809

J. Roll, E. Tades, R. Lasa and M. Aloja
The effect of winter length on survival and duration of dormancy of four sympatric species of Rhagoletis exploiting plants with different fruiting phenology 818

J. Sklodowski
Ground beetle assemblages across a habitat gradient in a stream watershed during 10 years of observation 827
