

*Images***Saddle pulmonary emboli: an unusual presentation**

Truptesh H. Kothari, MD, MS;* Shivangi Kothari, MD;† Mahima Pandey, MD;* Harshit Khara, MD;‡ Nishant Dhungel, MD*

A 38-year-old man with a history of polyposis syndrome diagnosed 3 years previously, with poor compliance for follow-up, presented to the emergency department with symptoms of retrosternal chest pain associated with dizziness and shortness of breath. His blood pressure was 94/43 mm Hg, his pulse was 123 beats/min and he had an oxygen saturation of 84% on room air. The patient's initial laboratory results showed a hemoglobin of 80 g/L and blood gas with a pH of 7.23. He had a normal chest radiograph and electrocardiogram, but had an elevated troponin I at 0.12 µg/L. He was given acetylsalicylic acid for suspicion of acute coronary syndrome. On physical examination, the patient was found to have right calf tenderness. With this finding and the presenting symptoms, he underwent computed tomography angiography (CTA) of the chest. The chest CTA showed a massive saddle

embolus with a filling defect completely occluding the right pulmonary artery and extending through the main pulmonary artery segment to involve the left pulmonary artery. There were also diffuse filling defects involving bilateral pulmonary segmental arteries (Fig. 1 and Fig. 2). The patient received alteplase and underwent a workup for a hypercoagulable state. His workup revealed positive anticardiolipin antibodies and factor V Leiden. The Doppler ultrasound of his lower extremities showed an extensive thrombus measuring more than 6 cm extending in the right superficial femoral vein. The patient was then referred for placement of an inferior vena cava filter.

DISCUSSION

Pulmonary embolism, usually accompanied by deep

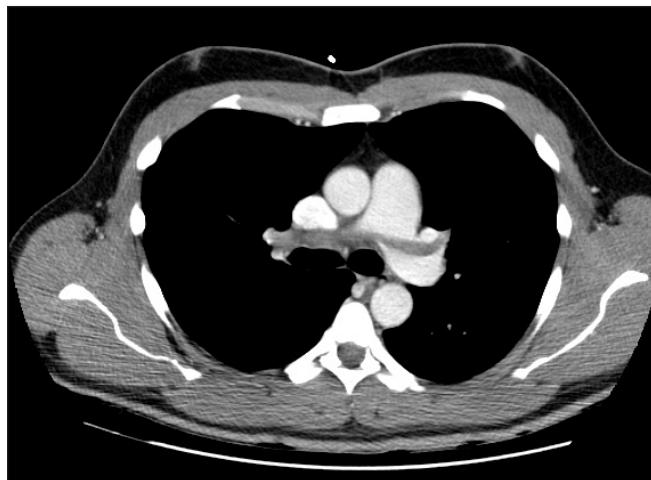

Fig. 1. Computed tomography scan with pulmonary embolism protocol showing entire involvement of pulmonary artery bilaterally, suggestive of saddle emboli.

Fig. 2. Computed tomography scan with pulmonary embolism protocol at the thoracic level showing saddle emboli leading to complete obliteration of the pulmonary arteries.

venous thrombosis, represents the most common manifestation of the antiphospholipid syndrome (APS) and may be the earliest manifestation of the disease. There is no difference clinically from an embolism in patients without APS. Recurrent pulmonary emboli can lead to pulmonary hypertension, which in severe cases can be associated with tricuspid insufficiency. A variety of patients with APS can present with widespread thrombotic occlusion affecting small pulmonary arteries or capillary lumens of the alveoli. However, involvement

of major pulmonary artery is a rare manifestation. Venous thromboembolism, mainly of the lower extremities, can occur in up to 55% of patients with APS.

Competing interests: None declared.

SERVICE INFORMATION

Subscription and sales

The *Canadian Journal of Emergency Medicine* (*CJEM*) is supplied to paid-up members of the Canadian Association of Emergency Physicians (CAEP) as a perquisite of membership; others may subscribe yearly. Rates for 2009 (6 issues): Canada (personal), \$225; Canadian institutions, \$399; outside Canada (personal), US\$254; US institutions, US\$449. Contact the CAEP office (800 463-1158). Single copies of current year issues \$50; back issues \$50 (subject to availability). Payment should be made to CAEP in funds specified drawn on a Canadian or US bank. VISA and MasterCard are also accepted.

Change of address

We require 6–8 weeks' notice to ensure uninterrupted service. Please fax your current mailing label, new address and effective date to 613 523-0190 or email: cjem@caep.ca. Send US and foreign address changes to International Media Services (IMS) of New York, 100 Walnut St., #3, PO Box 1518, Champlain NY 12919-1518.

Reprints

Bulk reprints of *CJEM* articles are available in minimum quantities of 50. For information or orders, please contact the reprint coordinator, Janis Murrey, 800 663-7336 or 613 731-8610 x2110, fax 613 565-7704, janis.murrey@cma.ca.

Electronic availability

CJEM is available on the CAEP website (cjem-online.ca).

Indexing

CJEM is indexed by MEDLINE/PubMed, EMBASE,

CINAHL, International Pharmaceutical Abstracts (IPA), BIOME/OMNI, Scirus, Cochrane Prehospital and Emergency Health Field, and PubsHub.com
