The International Psychogeriatric Association (IPA) invites national and regional organizations in the field of Psychogeriatrics to apply for affiliation.

We believe much can be accomplished when organizations work together to achieve shared goals. Together we can find ways to support more effective research efforts, better educational and informational activities, and enlightened public policy in all nations.

Organizations that have goals addressing mental health and aging issues are eligible to apply for affiliation. Affiliate organizations can be from any of the various disciplines associated with IPA. IPA also welcomes multiple organizations from any country.

Below we acknowledge these outstanding organizations as IPA Affiliates and our joint commitment to the common goal of better mental health for older people.

**IPA Affiliates**
