International Journal of Technology Assessment in Health Care

Editors

Stanley J. Reiser, University of Texas, Health Science Center at Houston
Egon Jonsson, Karolinska Institute and the Swedish Council of Technology Assessment in Health Care

Official Journal of the International Society of Technology Assessment in Health Care

The use of technology in health care has created some of the major dilemmas in society today. The cost of new technologies, the allocation of available resources and the ethical questions involved are topics of major concern to medical practitioners and researchers. The International Journal of Technology Assessment in Health Care serves as a forum for the wide range of professionals interested in the assessment of medical technology, its consequences for patients and its impact on society. It covers the generation, evaluation, diffusion and use of health care technology. In addition to general essays, regular columns on technology assessment reports, reviews and announcements, and thematic sections are published.

Quarterly (ISSN 0266-4623) Volume 10, 1994 Institutions \$126.00; Individuals \$90.00.

Responsible Reading

The Ethical Dimensions of the Biological Sciences

Ruth Ellen Bulger, Elizabeth Heitman, Stanley Joel Reiser, Editors

This is the first systematically organized anthology on responsible conduct in scientific research designed in response to the increasing concern to teach students about ethical issues in the biological sciences.

The book contains classic essays and other published material and is carefully structured to explore a range of subjects. They include: the qualifications for authorship; plagiarism; the use of human beings and animals in research; the norms of ethical conduct in science; scientific honesty and its relationship to gullibility and self-deception; ethical issues in laboratory work; the relation between science and society; the ethics of teaching and learning. The volume also provides insights into issues often not formally considered in graduate science education such as methods of scientific investigation, scientific paradigms, and the creative process.
