

EXTINCTIONS

Living and Dying in the
Margin of Error

MICHAEL HANNAH

Hardback | 9781108843539 | £20 | \$24.95

Are we now entering a mass extinction event? What can mass extinctions in Earth's history tell us and how does life on earth recover from them? How can we avoid a disastrous human-made mass extinction event? Michael Hannah answers these questions and more in this compelling book.

Extinctions is an exuberant road trip through the history of life on Earth, led by a friendly and knowledgeable guide who knows all the locals along the way. Visiting so many ancestral Earthlings and vanished ecosystems is heady - and deeply humbling.

Marcia Bjornerud, *Lawrence University, author of Timefulness and Reading the Rocks*

The mass extinctions of the past clearly have relevance to the current approaching catastrophe in the Anthropocene, and the careful appraisal of exactly where we are in comparison with previous extinctions will be of great concern to those interested in the 'long view'. I particularly appreciated the focus on the notion of the interconnectedness of Earth systems.

Richard Fortey, *author of Life: An Unauthorised Biography History and Trilobite: Eyewitness to Evolution*

An accessible and authoritative guide to the past, present, and future of extinctions ... explains how they are relevant to understanding the predicament we are in today, and to plotting a better future.

Steve Brusatte, *New York Times/Sunday Times bestselling author of The Rise and Fall of the Dinosaurs*

JOURNAL POLICY

Paleobiology publishes original research contributions dealing with any aspect of biological paleontology and geobiology. Papers should emphasize biological or paleobiological processes and patterns and seek to answer a question or test a hypothesis or broad significance. Appropriate topics or themes include, but are not limited to, speciation, extinction, development, natural selection, evolution, and patterns of variation, abundance, and distribution in space and time. Papers concerning research on recent organisms and systems are appropriate if they are relevant to paleontologists.

All manuscripts should be in English. A guide to manuscript preparation is published online at: <https://www.cambridge.org/core/journals/paleobiology>. All manuscript submissions and the review process are handled online at: <https://mc.manuscriptcentral.com/pab>. Submission of a manuscript to *Paleobiology* implies that it is not simultaneously being considered for publication by another journal.

Manuscripts are typically 50 pages or less (including text, references, tables, and figures); shorter manuscripts are encouraged. Supplementary materials for accepted manuscripts are not published in the print version, and must be archived at Dryad at <http://datadryad.org>. Previously unpublished datasets used in analyses must be archived in Dryad. Authors are not required to upload all aspects of the datasets; however, the archived data must be sufficient to reproduce all results presented in the manuscript. Any custom written programs (e.g., R scripts) used in analyses and graphing must be archived in Dryad as well. The archiving is required only for accepted manuscripts and the authors are not required to upload those files to Dryad during the initial submission of the manuscript. Pre-submission inquiries about potential suitability of manuscripts should be directed to the editors at: paleobiology@cambridge.org.

MANUSCRIPT ACCEPTANCE POLICY

It is understood that, in return for publication, the journal has the nonexclusive right to publish the contribution and the continuing right, without limit, to include the contribution as part of any reprinting of the issue or volume of the journal in which the contribution first appeared by any means and in any format, including computer-assisted storage and readout, in which the issue or volume may be produced by the publisher or by its licensed agencies.
