## Table of Contents

Preface .....	xii
Organizing committee .....	xiii
Conference photograph .....	xiv
Conference participants .....	xv
Tribute to Yolanda Gómez Castellano .....	xvii
<b>T1: Advances in Maser Theory <i>Chair: Roy Booth</i></b>	
Advances in Maser Theory .....	3
<i>V. Strelnitski</i>	
Modelling of Cosmic Molecular Masers: Introduction to a Computation Cookbook	13
<i>A. M. Sobolev &amp; M. D. Gray</i>	
A detailed trace of the pump for 1720-MHz OH masers in SNRs .....	23
<i>M. D. Gray</i>	
<b>T2: Polarization and magnetic fields <i>Chair: Athol Kemball</i></b>	
Maser polarization and magnetic fields .....	31
<i>W. H. T. Vlemmings</i>	
Polarization of Class I methanol ( $\text{CH}_3\text{OH}$ ) masers .....	41
<i>A. P. Sarma</i>	
Polarization of the Recombination Line Maser in MWC349. ....	49
<i>C. Thum, D. Morris, &amp; H. Wiesemeyer</i>	
VLBA SiO maser observations of the OH/IR star OH 44.8-2.3: magnetic field and morphology .....	54
<i>N. Amiri, W. H. T. Vlemmings, A. J. Kemball &amp; H. J. van Langevelde</i>	
Linear polarization of hydroxyl masers in circumstellar envelope outer regions ..	59
<i>P. Wolak, M. Szymczak &amp; E. Gérard</i>	
Maser polarization with ALMA .....	64
<i>A. F. Pérez-Sánchez &amp; W. Vlemmings</i>	
High resolution magnetic field measurements in high-mass star-forming regions using masers .....	69
<i>G. Surcis, W. H. T. Vlemmings, H. J. van Langevelde &amp; B. H. Kramer</i>	
The magnetic field of IRAS 16293-2422 as traced by shock-induced $\text{H}_2\text{O}$ masers	74
<i>F. O. Alves, W. H. T. Vlemmings, J. M. Girart &amp; J. M. Torrelles</i>	
Water Maser Emission Around Low/Intermediate Mass Evolved Stars .....	79
<i>M. L. Leal-Ferreira, W. H. T. Vlemmings, P. J. Diamond, A. Kemball, N. Amiri &amp; J.-F. Desmurs</i>	
Observational tests of SiO maser polarisation models. ....	81
<i>L. Richter, A. J. Kemball &amp; J. L. Jonas</i>	

**T3a: Star formation: maser variability** *Chair: Philip Diamond*

Variability of Class II methanol masers in massive star forming regions . . . . .	85
<i>S. Goedhart, M. Gaylard, &amp; J. van der Walt</i>	
Binary systems: implications for outflows & periodicities relevant to masers . . . . .	93
<i>N. K. Singh &amp; A. A. Deshpande</i>	
Intermittent maser flare around the high-mass young stellar object G353.273+0.641	98
<i>K. Motogi, K. Sorai, K. Fujisawa, K. Sugiyama &amp; M. Honma</i>	
VERA Observations of the H <sub>2</sub> O Maser Burst in Orion KL . . . . .	103
<i>T. Hirota, M. Tsuboi, K. Fujisawa, M. Honma, N. Kawaguchi, M. K. Kim, H. Kobayashi, H. Imai, T. Omodaka, K. M. Shibata, T. Shimoikura, &amp; Y. Yonekura</i>	
The variability of cosmic methanol masers in massive star-forming regions . . . . .	108
<i>J. P. Maswanganaye &amp; M. J. Gaylard</i>	
Chasing the flare in Orion KL: Observations of the 22 GHz H <sub>2</sub> O Masers at HartRAO . . . . .	110
<i>S. Otto &amp; M. J. Gaylard</i>	
On the Methanol masers in G9.62+0.20E: Preliminary colliding-wind binary (CWB) calculations . . . . .	112
<i>S. P. van den Heever, D. J. van der Walt, J. M. Pittard &amp; M. G. Hoare</i>	

**T3b: Star formation masers** *Chair: Crystal Brogan*

Masers in star forming regions . . . . .	117
<i>A. Bartkiewicz &amp; H. J. van Langevelde</i>	
Masers in GLIMPSE Extended Green Objects (EGOs) . . . . .	127
<i>C. J. Cyganowski, C. L. Brogan, T. R. Hunter, E. Churchwell, J. Koda, E. Rosolowsky, S. Towers, B. Whitney, &amp; Q. Zhang</i>	
44 GHz Methanol Maser Surveys . . . . .	133
<i>S. E. Kurtz</i>	
A Highly-collimated Water Maser Bipolar Outflow in the Cepheus A HW3d Massive Protostellar Object . . . . .	141
<i>J. O. Chibueze, H. Imai, D. Tafoya, T. Omodaka, O. Kameya, T. Hirota, S.-N. Chong, &amp; J. M. Torrelles</i>	
Methanol masers and millimetre lines: a common origin in protostellar envelopes	146
<i>K. J. E. Torstensson, H. J. van Langevelde, F. F. S. van der Tak, W. H. T. Vlemmings, L. E. Kristensen, S. Bourke &amp; A. Barkiewicz</i>	
The infrared environment of methanol maser rings at high spatial resolution . . . . .	151
<i>J. M. De Buizer, A. Bartkiewicz &amp; M. Szymczak</i>	
Masers as evolutionary tracers of high-mass star formation . . . . .	156
<i>S. L. Breen &amp; S. P. Ellingsen</i>	
Class I methanol masers in low-mass star formation regions . . . . .	161
<i>S. V. Kalenskii, V. I. Slysh, L. E. B. Johansson, P. Bergman, S. Kurtz, P. Hofner, &amp; C. M. Walmsley</i>	

Dynamical detection of a magnetocentrifugal wind driven by a 20 M <sub>⊙</sub> YSO . . . . .	166
<i>L. J. Greenhill, C. Goddi, C. J. Chandler, E. M. L. Humphreys, &amp; L. D. Matthews</i>	
The W51 Main/South SFR complex seen through 6-GHz OH and methanol masers . . . . .	171
<i>S. Etoka, M. D. Gray &amp; G. A. Fuller</i>	
What is happening in G357.96-0.16? . . . . .	176
<i>T. R. Britton, M. A. Voronkov, &amp; V. A. Moss</i>	
Infrared characteristics of sources associated with OH, H <sub>2</sub> O, SiO and CH <sub>3</sub> OH masers . . . . .	178
<i>J. Esimbek, J. J. Zhou, G. Wu &amp; X. D. Tang</i>

## Preface

The fourth IAU Symposium on Astronomical *masers*, IAUS 287, entitled *Cosmic Masers - from OH to H<sub>0</sub>* was held in South Africa from January 29 February 3. The venue was the excellent Wallenberg Conference Centre in the beautiful old town of Stellenbosch nestling in the foothills of one of the countrys foremost wine districts.

The meeting was opened by Dr. Bernie Fanaroff, Director of the South African SKA Project, who pointed out that human-kind had its origins in Africa and learned basic skills before migration and continental drift led to the population of the rest of the World.

Despite a strenuous programme with lively discussions, the participants found time to visit the Cape Town Water Front and take a boat trip to historical Robben Island, where the present political structure was formulated in the mid 90s. They also enjoyed an African evening at a local hospice, where they sampled truly African food, song and dance.

Interstellar hydroxyl *masers* were first reported in 1965, at the beginning of an avalanche of detections of interstellar molecules and the emergence of the science of Cosmo-chemistry. Many molecules are now found to exhibit polarized (circular and linear) stimulated emission in a variety of astrophysical environments and the hierarchy extends from the interstellar medium and regions of stellar formation through winds around evolved stars and even the compressed gas surrounding Supernova remnants. *masers* are also detected in other galaxies as analogues of Galactic *masers*, and in the dense molecular regions near AGN. Most recently, *masers* have been detected in Comets and other regions of the Solar System. In all cases they have proved to be important diagnostics of their associated regions, pinpointing dense gas, its motions and the local magnetic field structure in great detail.

This phenomenon has proved to be invaluable in astrometry and the details of Galactic structure and rotation have been refined through precise observation of *masers*. The same properties of *masers* have been used to great effect to measure the study of Galactic nuclei and because of the precise measurement of position and velocity, water *masers* have enabled the unambiguous determination of the Hubble Constant at small red-shifts.

Recent *maser* surveys, and measurements of the above phenomena were discussed at the Stellenbosch meeting along with new detections of known *masers* and detections of new *maser* species. Discussion extended from reviews of the theory of the phenomenon, *maser* properties such as variability and polarisation, to its use in astrometry and in cosmology.

More than 110 participants, including some 25 students (many securing IAU grants) attended the meeting. There were 68 oral contributions, including 8 by students and many posters, displayed all week and discussed in 3 separate poster sessions. In general the meeting followed its predecessor with 10 different scientific themes, each with a review talk, one or two invited talks and contributed talks.

Finally we thank our sponsors the South African SKA project and the Natural Science Research Council, NRF.

*Roy Booth, Liz Humphreys & Wouter Vlemmings*

## THE ORGANIZING COMMITTEE

### **Scientific**

A. Bartkiewicz (Poland)	M. Honma (Japan)
R.S. Booth (Chair, South Africa)	E.M.L. Humphreys (co-Chair, Germany)
V. Bujarrabal (Spain)	A.J. Kemball (USA)
J.M. Chapman (Australia)	K.-T. Kim (Taiwan)
M. Elitzur (USA)	H.J. van Langevelde (Netherlands)
S.P. Ellingsen (Australia)	J.M. Moran (USA)
Y. Gómez (Mexico)	W.H.T. Vlemmings (co-Chair, Sweden)
M.D. Gray (UK)	

### **Local**

K. de Boer	M. Oozeer
R.S. Booth (Chair)	S. Passmoor
S. Fishley	A. Schroeder
M.J. Gaylard	D.J. van der Walt
S. Goedhart (co-Chair)	P.A. Whitelock
R. Hames	

### **Acknowledgements**

The symposium was sponsored and supported by the IAU Divisions I (Fundamental Astronomy), VI (Interstellar Matter), VII (Galactic System), and X (Radio Astronomy); and by the IAU Commission No. 40 (Radio Astronomy).

Funding by the  
 National Research Foundation (NRF),  
 and  
 the South African SKA project  
 are gratefully acknowledged.

## Tribute to Yolanda Gómez Castellano

The proceedings of IAU Symposium 287 are dedicated to the memory of Yolanda Gómez Castellano. Yolanda died on 16 February 2012, shortly after the symposium, at the age of forty-nine. She had struggled with cancer for a number of years, and her illness took a sudden, and unexpected, turn for the worse just weeks before the meeting. She was a member of the Scientific Organizing Committee of the symposium, and had planned to attend the meeting, canceling her travel plans only days before her scheduled departure for South Africa. Despite the state of her health, Yolanda still had sufficient energy to fulfill her wish to participate in the conference by sending her contribution as a poster (*Imaging the water masers toward the H<sub>2</sub>O-PN IRAS 18061-2505*) through Mexican colleagues.

Yolanda's professional career was based at the National Autonomous University of Mexico (UNAM). Her professional degrees (in physics) were all obtained from the UNAM, although her doctoral research (*A study in Radio Frequencies of Young Planetary Nebulae and OH/IR Stars*) was carried out at the Harvard-Smithsonian Center for Astrophysics. Upon her return to Mexico from Boston, she worked side-by-side with her husband, Luis Felipe Rodríguez, to establish a Mexican presence in the international radio astronomy community.

Yolanda worked for more than twenty years at the UNAM; she began her research career at the Institute for Astronomy at the Mexico City campus. Later, she was a founding member of the Center for Radio Astronomy and Astrophysics (CRyA) at the Morelia Campus of the UNAM, where she was a full professor.

Yolanda's primary research area was the study of gaseous nebulae, both young planetary nebulae associated with evolved stars and compact HII regions associated with young massive stars. She also did significant work on protoplanetary disks and jets associated with young stellar objects. Her research resulted in more than 65 published papers with numerous important contributions. Among her most notable discoveries was the first detection of water vapor around a planetary nebula. This was unexpected because the radiation field around these stars should destroy any nearby molecules. She was actively pursuing this fascinating line of research at the time of her death and in fact this was the topic of her contribution at the Symposium. In addition, Yolanda was a generous and cheerful teacher, always willing to help and guide her students. Her enthusiasm led many of her students to become astronomers: without exception her former masters and doctoral students have joined the research community, and are now independent researchers.

She was a firm believer that science is for everyone — not just for specialists but also for the general public. Consequently, Yolanda not only assumed an active role in the postgraduate astronomy program of the UNAM but she also taught undergraduate physics at the state university of Michoacán, in addition to giving courses in astronomy in several Latin American countries. Particularly notable was Yolanda's extensive involvement in public outreach. She gave innumerable talks, workshops, radio and television interviews and published more than 40 popular science articles. She had a key role in the International Year of Astronomy as celebrated in Mexico, organizing all of the events of the CRyA and serving as president of the state organizing committee. The 350 public outreach events that took place that year attracted more than 100,000 participants. The highlight was the *Noche de las Estrellas* at the prehispanic ruins in Tzintzuntzan, Michoacán, which an estimated 10,000 people attended. In addition, Yolanda contributed to the development of teaching materials for popularizing astronomy and the design of

astronomical displays and activities for science museums. Thanks to the warmth, enthusiasm and dedication with which Yolanda took astronomy to the public, the state government of Michoacán awarded her the 2008 State Prize for Public Outreach of Science and Technology.

Although perhaps little recognized by her professional colleagues, Yolanda was a avid lover of the arts. Not only did she come from a very musically-talented family, but she was also a devoted follower of the visual arts, decorating her home with outstanding works by national and regional Mexican artists. Moreover, she herself had a creative, artistic side: the logo of the CRyA — a radio telescope depicted in the style of Oriental calligraphy — was of her own design.

Those of us who knew Yolanda personally will miss her ready smile and the cheerfulness that accompanied her wherever she went. She will be greatly missed, by her former students, by her colleagues and friends in Morelia, in Mexico, and around the world, and most of all by her family, in particular by her children, Vicente and Cecilia, and her husband Luis Felipe, to whom we extend the warmest embrace.

Rest in Peace, Yolanda.

S. Kurtz & J.M. Torrelles
