**Copying:** This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA. Organizations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of \$16. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0959-2709/2020 \$16.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions. *For all other use*, permission should be sought from Cambridge or the American branch of Cambridge University Press.

**Cover photograph:** Southern Ground-hornbill *Bucorvus leadbeateri* is sparsely distributed across much of southern Africa, but is categorised as Vulnerable on the IUCN Red List on the basis of rapid declines, especially in South Africa. Since 1995, reintroductions have been tested as a potential conservation tool for this species, which exhibits complex social learning and hierarchy, and is long-lived, with delayed sexual maturity. In this issue, Lucy Kemp *et al.* analyse the outcomes of the reintroduction attempts made under varying management strategies, to assess which factors contributed most to success or failure.
