Molecular Nutrition
Zebrafish (Danio rerio) as a model for investigating the safety of GM feed ingredients (soya and maize); performance, stress response and uptake of dietary DNA sequences.

Intervention with fish oil, but not with docosahexaenoic acid, results in lower levels of hepatic soluble epoxide hydrolase with time in apoE knockout mice.
Y. Macrommatis, K. Russ, G. Rackliffe, M. Reid, G. Duncan, M. J. Gordon, F. Thies, A. Sneddon & B. de Roos 16–24

Protective effect of serotonin derivatives on glucose-induced damage in PC12 rat phaeochromocytoma cells.

Metabolism and Metabolic Studies
Short-term docosapentaenoic acid (22 : 5n-3) supplementation increases tissue docosapentaenoic acid, DHA and EPA concentrations in rats.

Effect of capsicinoids on energy metabolism in human subjects.
J. E. Galgani, D. H. Raas & E. Ravussin 38–42

Effect of capsicinoids on energy metabolism in human subjects.
J. E. Galgani, D. H. Raas & E. Ravussin 38–42

Human and Clinical Nutrition
Acute effects of different types of oil consumption on endothelial function, oxidative stress status and vascular inflammation in healthy volunteers.

Body fat, insulin resistance, energy expenditure and serum concentrations of leptin, adiponectin and resistin before, during and after pregnancy in healthy Swedish women.
B. Eriksson, M. Leif, H. Olsson & E. Foroum 50–57

Consumption of a fermented dairy product containing the probiotic Lactobacillus casei DN-114 001 reduces the duration of respiratory infections in the elderly in a randomised controlled trial.
E. Guilletioud, F. Tendu, F. Lucvin & J. Schrezenmeir 58–68

Variety of porphyria induces plasma and neutrophil oxidative stress: effects of dietary supplementation with vitamins E and C.
M. D. Ferrer, P. Tauler, A. Sureda, C. Palacin, J. A. Tar & A. Pons 69–76

Prevalence of the metabolic syndrome among female Kuwaiti adolescents using two different criteria.
A. Al-Iusa, A. O. Akann & L. Thuilth 77–81

Adaptation of colonic fermentation and glucagon-like peptide-1 secretion with increased wheat fibre intake for 1 year in hyperinsulinaemic human subjects.
K. R. Freeland, C. Wilson & T. M. S. Wolcoer 82–90

Hamburger high in total, saturated and trans-fatty acids decreases HDL cholesterol and LDL particle diameter, and increases TAG, in mildly hypercholesterolaemic men.

Dietary Surveys and Nutritional Epidemiology
Prevalence and risk factors for obesity in Balearic Islands adolescents.

Chinese tea consumption is associated with longer telomere length in elderly Chinese men.
B. Cian, J. Wise, E. Seen, I. Leung & N. Tang 107–113

Intake and home use of olive oil or mixed oils in relation to healthy lifestyles in a Mediterranean population. Findings from the prospective Pizarra study.

Nutritional Energetics
Efficiency of fat deposition from non-starch polysaccharides, starch and unsaturated fat in pigs.
R. Male, L. Babinczyk, J. Djikstra, M. W. A. Verstegen & W. J. J. Govers 123–133

(Contents continued facing inside back cover)
The British Journal of Nutrition is an international, peer-reviewed journal publishing original papers, review articles, short communications and technical notes on human and clinical nutrition, animal nutrition and basic science as applied to nutrition. Correspondence is encouraged in a Nutrition Discussion Forum. The Journal recognizes the multidisciplinary nature of nutritional science and encourages the submission of material from all of the specialties involved in research and clinical practice. The Journal also publishes supplements on topics of particular interest.

The British Journal of Nutrition is published twice monthly by Cambridge University Press on behalf of The Nutrition Society.

Editor-in-Chief
P C Calder, School of Medicine, University of Southampton, Southampton, UK

Deputy Editors
F Bélèque, INRA, University of Paris, Bobigny, France
D B Jacobs Jr, School of Public Health, University of Minnesota, Minneapolis, MN, USA

The Nutrition Society has as its objective the advancement of the scientific study of nutrition and its applications to the maintenance of human and animal health.  

Membership of appointment is invited from anyone whose work has contributed to the scientific knowledge of nutrition, whether such work has been in the laboratory, the field or the clinic, and whether experimental, clinical, agricultural or statistical in nature. There is also a student membership scheme with reduced subscriptions.

The British Journal of Nutrition is published on-line by Cambridge University Press on behalf of the Nutrition Society 2010©

Directions to Contributors - Concise Version
(Revised August 2007)

The British Journal of Nutrition is an international peer-reviewed journal that publishes original papers, review articles, technical reports and short communications. In English in all branches of nutritional science. Prospective authors should note that they (or their institutions) now retain the copyright of their material published in the British Journal of Nutrition. As a contributor you are asked to follow the guidelines set out below. For detailed information on the presentation of the technical content of your paper please see the full version of the Directions to Contributors, which can be downloaded from the Nutrition Society website (http://www.nutrition society.org). Prospective authors may also contact the Publications Office directly on +44 (0)20 7605 6555 (telephone), +44 20 7602 1756 (fax), or edificio@nussoci.org.uk (email).

Submissions should be accompanied by a statement to the effect that the conditions laid down in the full Directions to Contributors are accepted. The statement should affirm that the submission represents original work that has not been published previously and which is not currently being considered by another journal. It should also confirm that each author has seen and approved the contents of the submitted paper. At the time of acceptance the authors will provide a completed copy of the 'Licence to Publish' (in lieu of copyright transfer). The Licence to Publish is available on the Nutrition Society website (http://www.nutrition-society.org). All relevant financial interests should be declared.

Text. Papers should be submitted with 1.5 line spacing and margins of at least 2 cm on each side. Text should be printed without underlining, bold or italics except for scientific names. Standard abbreviations (e.g. Fig. and Figs.) and SI units should be used. Text should not exceed 2500 words.

Abstract. Each paper should commence with an accurate and informative title and should not duplicate information in the text or figures. They should not exceed 250 words.

Tables. Tables should be reduced to the simplest form, and should not duplicate information in the text or figures. They should be typed on separate pages, one page for each Table, at the end of the article and carry headings describing their content.

Illustrations. The original illustrations should accompany the submitted typescript. Text figures, line drawings, computer-generated figures and graphs should be of sufficient size and quality to allow for reduction by half or two-thirds. Halftone photographs are acceptable where they clearly contribute to the text. All figures should be numbered and legends should be provided.

Note that authors will be charged 350 GBP for the publication of colour figures. Authors from countries entitled to free journal access through HINARI will be exempt from these charges.

References. References should be based on the numbered (Harvard) system. When an article has more than ten authors, only the names of the first three should be given followed by et al.; give abbreviated journal titles and conform to the following style:

Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g. ‘The conceptual difficulty of this approach has recently been highlighted (1)’. If a reference is cited more than once the same number should be used each time.

Referees. Authors are asked to submit the names of up to four reviewers who would be well-qualified to review the paper; however, no more than one such reviewer will be used. The names and addresses of the institutions of the named referees should be given.

Proofs. PDF page proofs will be emailed to authors for checking, and should be returned within 3 days day fax or Express mail to the BJN Production Editor, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, UK; fax: +44 1223 328082, email: bjnproduction@cambridge.org

Typescripts. The British Journal of Nutrition operates an on-line submission and reviewing system (eJournalPress). Authors should submit to the following address: typescripts@journals.cambridge.org. If any difficulties are encountered please contact the Publications Office (details above) immediately.

Editors’ conflicts of interest.
P. C. Calder 1–2

Molecular Nutrition
Zebrfish (Danio rerio) as a model for investigating the safety of GM feed ingredients (soya and maize); performance, stress response and uptake of dietary DNA sequences.

Intervention with fish oil, but not with docosahexaenoic acid, results in lower levels of hepatic soluble epoxide hydrolase with time in apoE knockout mice.
Y. Mavrommatis, K. Ross, G. Rucklidge, M. Reid, G. Duncan, M.-J. Gordon, F. Thies, A. Sneddon & B. de Roos 16–24

Protective effect of serotonin derivatives on glucose-induced damage in PC12 rat pheochromocytoma cells.

Metabolism and Metabolic Studies
Short-term docosapentaenoic acid (22:5n-3) supplementation increases tissue docosapentaenoic acid, DHA and EPA concentrations in rats.

Effect of capsinoids on energy metabolism in human subjects.
J. E. Galgani, D. H. Ryan & E. Ravussin 38–42

Human and Clinical Nutrition
Acute effects of different types of oil consumption on endothelial function, oxidative stress status and vascular inflammation in healthy volunteers.

Body fat, insulin resistance, energy expenditure and serum concentrations of leptin, adiponectin and resistin before, during and after pregnancy in healthy Swedish women.
B. Eriksson, M. Löf, H. Olausson & E. Forsum 50–57

Consumption of a fermented dairy product containing the probiotic Lactobacillus casei DN-114 001 reduces the duration of respiratory infections in the elderly in a randomised controlled trial.
E. Guillemand, F. Tondu, F. Lacoin & J. Schrezenmeir 58–68

Variegate porphyria induces plasma and neutrophil oxidative stress: effects of dietary supplementation with vitamins E and C.
M. D. Ferrer, P. Tailer, A. Sureda, C. Palaceño, J. A. Tur & A. Pons 69–76

Prevalence of the metabolic syndrome among female Kuwaiti adolescents using two different criteria.
A. Al-Isa, A. O. Akanji & L. Thalib 77–81

Adaptation of colonic fermentation and glucagon-like peptide-1 secretion with increased wheat fibre intake for 1 year in hyperinsulinaemic human subjects.
K. R. Freeland, C. Wilson & T. M. Wolever 82–90

Hamburger high in total, saturated and trans-fatty acids decreases HDL cholesterol and LDL particle diameter, and increases TAG, in mildly hypercholesterolaemic men.

Dietary Surveys and Nutritional Epidemiology
Prevalence and risk factors for obesity in Balearic Islands adolescents.

Chinese tea consumption is associated with longer telomere length in elderly Chinese men.
R. Chan, J. Woo, E. Suen, J. Leung & N. Tang 107–113

Intake and home use of olive oil or mixed oils in relation to healthy lifestyles in a Mediterranean population. Findings from the prospective Pizzara study.

Nutritional Energetics
Efficiency of fat deposition from non-starch polysaccharides, starch and unsaturated fat in pigs.
V. Halas, L. Babinszky, J. Dijkstra, M. W. A. Verstegen & W. J. J. Gerrits 123–133
Innovative Techniques
Correspondence of continuous interstitial glucose measurement against arterialised and capillary glucose following an oral glucose tolerance test in healthy volunteers.

Behaviour, Appetite and Obesity
Prolonged refeeding improves weight maintenance after weight loss with very-low-energy diets.
L. Gripeteg, J. Torgerson, J. Karlsson & A. K. Lindroos 141–148
