The Journal of Laryngology and Otology

EDITED BY
G. H. BATEMAN

ASSISTANT EDITOR
LIONEL TAYLOR

Contents

ACUTE RESPIRATORY VIRUS INFECTIONS IN CHILDHOOD C. H. STUART-HARRIS
SENSORY NEURAL DEAFNESS IN PELLAGRA A. YASSIN AND M. Taha
ALPHA-CHYMOTRYPSIN IN OTOLOGY A. COYAS
TRIBUTYRINESTERASIC ACTIVITY OF THE TONSILS A. GRANITSAS, A. ACHIMASTOS AND A. COYAS

COMPARISON OF THE FINDINGS ON TRANSILLUMINATION, X-RAY AND LAVAGE OF THE MAXILLARY SINUS RONALD ALASTAIR MCNEILL

EXPERIMENTAL STUDIES ON THE LOCAL EFFECTS OF ACETYLCHOLINE, CHOLINERGIC-BLOCKING AND ANTICHOLINESTERASE DRUGS ON THE VESTIBULAR FUNCTION. PRELIMINARY REPORT G. ROSSI, G. VOENA, S. BUONGIOVANNI AND G. CORTESINA

CLINICAL RECORDS—
OSTEOMYELITIS OF THE MAXILLA H. B. HOLDEN AND D. J. DURCAN
PULSATING TINNITUS AND ACUTE COCHLEAR FAILURE GEORGE GRAY
PROBOSCIS LATERALIS P. B. RAO
CERVICAL VERTIGO—REPORT OF A CASE A. G. D. MARAN
EPIDERMOID CYST OF THE MAXILLA CAUSING "RHINITIS CASEOSA" A. P. FULLER
TRACHEAL OEDEMA TREATED BY INSTILLATION OF ADRENALINE P. M. BINNS

SOCIETIES' PROCEEDINGS—
THE SCOTTISH OTOLARYNGOLOGICAL SOCIETY

GENERAL NOTES

London
Headley Brothers
109 Kingsway WC2

Annual Subscription £4/4/0 net, U.S.A. $13 Monthly, 10/- net post free
As from January 1964 the Annual Subscription will be £5/5/0 net, U.S.A. $15 Monthly, 12/6 net post free
1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this Journal solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) J. Laryng., 65, 33. Abbreviations of Journals should follow the style recommended in World Medical Periodicals, published by World Health Organization, 1952.

It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the Journal of Laryngology. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

8. The annual subscription (as from January 1964) is five guineas sterling (U.S.A. $15) post free, and payable in advance.

9. Single copies will be on sale at 10s. ed. each (as from January 1964, 12s. 6d.); copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, WC2.

United States of America

Orders for this Journal may be sent through local bookseller, or to STRECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, WC2, England.

SAINT LOUIS 10, MO.
PETERS' NEW CLINIC AUDIOMETER
FOR PURE-TONE AND SPEECH

CONSIDER THESE FEATURES:
- A continuous frequency range with continuous automatic threshold compensation.
- Twin continuously variable attenuators accurate to 1 db.
- Narrow band masking of pure tones plus insert receiver.
- Manual or automatic completely silent interruption.
- Loudness Balance and Difference Limen Recruitment Tests.
- High Fidelity Speech Circuit with Accessories for Free Field Speech Audiometry.
- Full Spectrum of White Noise for Masking Speech.
- Completely Transistorised for reliability.

The Westrex Company Limited, who are leading suppliers of Deaf Education Equipment, have a nationwide servicing organisation. In the immediate future their engineers in the field will be co-operating in the speedy servicing of all "Peters" audiometers in Great Britain.

Write for a descriptive brochure giving full details of this magnificent instrument and ask for a demonstration from either:

Orbenin is highly bactericidal to both resistant and sensitive staphylococci, and also to other Gram positive organisms such as streptococci and pneumococci.

Dosage: 500mg. orally (capsules or syrup) 6-hourly. Orbenin may also be given by Intramuscular injection.
'She gave me ears'

William Wordsworth (1807)

Another satisfied customer, perhaps. Dorothy, 'the Blessing of my later years,' made the world come alive again for Wordsworth, and a new invisible hearing aid has often done just this for the clients of Ingrams.

You can help your patients to take the first step by telling them about Ingrams, the firm of independent—and thus completely impartial—hearing aid consultants.

Ingrams will help your patient to choose from twenty-six different makes. This is the largest selection in the country—and some of the most advanced aids are exclusive to Ingrams.

Wordsworth was so grateful to Dorothy that he made her immortal. We cannot guarantee that your patients will do the same but we know they will be pleased that you—like so many other E.N.T. Specialists—recommended the Ingrams service.

STOP....
running noses
in the common cold

'Triominic' provides:
- decongestant and anti-allergic effects
- relief of rhinorrhea and lachrymation
- relief of congestion and sneezing
- prompt symptomatic relief systemically

Each Tablet contains:
- Phenylpropanolamine-HCl 50 mg.
- Mepyramine maleate B.P. 25 mg.
- Pheniramine maleate 25 mg.

'Triominic' Syrup (orange flavour) for children and for adults permits greater flexibility of dosage. Each teaspoonful (4 ml.) is equivalent to ½ 'Triominic' Tablet.

Basic N.H.S. Price: 50 Tablets 7/-;
2 fl. oz. Syrup 2/6.

Samples on request from A. Wander Limited
42 Upper Grosvenor Street
London W.1

ADVERTISEMENTS

Put these New Books in Laryngology and Otology to work for you

MANUAL OF SURGICAL TECHNIQUE
by Warner F. Bowers, New York Medical College, New York City; Thomas H. Hewlett, Univ. of Colorado, Denver, Colo.; and George J. Thomas, Brooke General Hospital, Fort Sam Houston, Texas. A step-by-step, how-to-do-it manual for general surgeon, surgical resident, and surgical specialist. Covers all common operations in neuro, plastic, vascular, nose and throat, orthopedic, gynecologic, and urologic surgery as well as all procedures in the abdomen and thorax. Not just "specialty" operations of the authors but all generally accepted procedures are pictured and described. A section on basic technique covers all aspects and types of wound closure, incision placement, bowel suture, plastic flaps and pedicles, technique of local and regional anesthesia, and debridement of wounds. Oct. '63, 328 pp. (8½ x 11), 977 ill., $14.00

RHINOSCLEROMA
by Francisco Kerdel-Vegas and Jacinto Convit, both of Universidad Central de Venezuela, Caracas, Venezuela; Bernard Gordon, Univ. of Calif., San Francisco, Calif., and Mauricio-Goihman, Vargas Hospital, Caracas, Venezuela. A superb study in depth of what is now a world-wide problem . . . rhinoscleroma. Its history and geographic distribution are considered. Bacteriology, immunology, and pathology are thoroughly discussed along with the latest biochemical information available. An extensive portion of the text is devoted to symptomatology, diagnosis and differential diagnosis. The authors evaluate various therapies that have been used in the past and record results with the newer broad spectrum antibiotics. July '63, 128 pp., 58 il. (1 plate in full color), (Amer. Lec. Dermatology edited by Arthur C. Curtis, Univ. of Michigan), $9.75

BIOPHYSICS OF THE EAR
by F. L. Dittrich in collaboration with R. C. Extermann. Both of Univ. of Geneva, Geneva, Switzerland. This book is the first to treat the delicate problem of biophysics of the ear in a comprehensive manner. Section one places the subject in its anatomical, physiological, and historical context. Section two is devoted to the biophysics of hearing or of the cochlear system. A third section covers the biophysics of orientation or of the vestibular system. Section four is devoted to the previously unexplored domain of cochlea-vestibular cybernetics. Will occupy an important place in the library of the otologist — bringing to his attention the latest experimental research so uniquely applicable to the diagnosis and treatment of ear diseases. Oct. '63, 136 pp., 73 il. (Amer. Lec. Biochemistry and Biophysics edited by W. Bladegrown, Sandoz Ltd.), $6.75

THE NOSE, PARANASAL SINUSES, AND EARS IN CHILDHOOD
by Donald F. Proctor, The Johns Hopkins Univ., Baltimore, Md. Provides long-needed clarification of controversial issues for both otolaryngologist and pediatrician. Chapter coverage includes history of the field; fundamentals of physiology and pathology; general principles underlying diagnostic and therapeutic considerations; specific problems related to the nose and paranasal sinuses, ears, and temporal bones; and conservation of hearing and speech. Recommended operative treatments are discussed in detail and fully illustrated. In a final chapter the author discusses results in approximately 1,000 of his own patients treated during the past twenty years. Jan. '63, 200 pp. (8½ x 11), 183 il. (Pediatric Surgical Monograph Series edited by Mark M. Ravitch, The Johns Hopkins Univ.), $12.50

The **AMPLIVOX** Model 90 transistor audiometer with **Bone Conduction & Masking**

Ideal for hospitals, hearing aid clinics, consulting rooms, industrial medical departments, schools, etc., when a full clinical instrument (such as the Amplivox Model 82) is not essential but where bone conduction measurements with masking are often required to supplement the air conduction audiogram.

- Nine frequencies for air conduction 250-8000 c/s
- Seven frequencies for bone conduction 250-4000 c/s
- White noise masking up to 70 dB in 10 dB increments
- Independent of mains supply
- British Standard calibration
- Maximum intensity 100 dB re BS
- Positive battery check ensures constant output accuracy
- Weighs only 14 lb
- Equally suitable for rapid screening or individual diagnostic audiometry

SEND FOR TECHNICAL LEAFLET describing this outstanding addition to the Amplivox range:

Amplivox Limited, Medical Acoustic Division, 80 New Bond St., London W1
The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

'OTOSPORIN' Drops ISSUED IN BOTTLES OF 5 ml.
