

INFORMATION FOR CONTRIBUTORS

Environmental Practice is an English-language journal published quarterly by the National Association of Environmental Professionals. It serves an international audience of environmental professionals in practice and research. *Environmental Practice* is peer-reviewed and accepts original manuscripts that have not previously been published in whole or in part in a peer-reviewed journal or in a widely available book. The general philosophy of the journal is outlined in the Mission Statement, which is reproduced in full after the Table of Contents in each issue.

Priority for publication is given to manuscripts that offer clear, insightful views on an environmental problem from an interdisciplinary perspective. *Environmental Practice* seeks especially to publish studies that link data and findings in science and technology with issues of public policy, health, environmental quality, law, political economy, management, and the appropriate standards for expertise. Because the readership of *Environmental Practice* is very broadly based, manuscripts should not be burdened by extensive, unexplained, technical language familiar only to a small group of specialists.

Manuscripts are accepted throughout the year. News items should be submitted by the first day of the month, three months prior to publication. For example, news items to appear in December should be submitted by September 1.

Kinds of Manuscripts Sought

Environmental Practice publishes several categories of manuscripts as described below. Three of these categories, Research Articles, Environmental Reviews, and Commentaries, are peer-reviewed.

Research Articles: manuscripts that report the results of systematic study on an environmental problem. Typically, research

articles will (a) report the results of a formal research exercise or (b) summarize systematic analysis of one or more case studies of particular interest. Environmental professionals in academic or research laboratory settings may be more likely to submit formal research reports. Professionals in consulting practice, agencies, or other organizations may be more likely to submit manuscripts based on case studies. Under most circumstances, Research Articles will not be over 5000 words of text. Most will be substantially shorter. Tables, figures, and reference lists need not be included in the word count. All Research Articles are peer-reviewed.

Environmental Reviews: manuscripts that organize and summarize a research literature or case study literature that is otherwise scattered and not easily accessible. Environmental Reviews will generally be about 6000 words of text. Tables, figures, and reference lists need not be included in the word count. All Environmental Reviews are peer-reviewed.

Commentaries: manuscripts that discuss a particular subject or problem. Typically, these manuscripts will identify the subject and discuss it in terms of (a) recent research of importance, (b) the implications of research for practice, (c) the interactions among research, policy, and practice, or (d) the social, cultural, economic, legal, or ethical context of the subject. Under most circumstances, Commentaries will be about 5000 words. Tables, figures, and reference lists need not be included in the word count. All Commentary manuscripts are peer-reviewed.

Book Reviews: manuscripts that portray the content, quality, and significance of books of wide interest to environmental professionals and their practices. Book Reviews should not exceed 750 words, but with the approval of the editor may reach 1500 words.

News Articles: manuscripts that report on (a) an environmental situation or events of

broad interest to environmental professionals, or (b) events and activities of the National Association of Environmental Professionals and its Chapters, Committees, and Working Groups. News Articles will generally range from 50 to 2000 words, depending on the subject. Tables, figures, and reference lists need not be included in the word count. Only in rare circumstances will News Articles be subjected to peer-review.

Points of View: statements of opinion intended to provoke discussion and debate on particular issues. These manuscripts will generally range from 200 to 850 words. Such manuscripts will not be subject to peer-review, because they are personal opinion. However, the editor may seek advice on matters of tone and fairness.

Letters to the Editor: responses to Research Articles, Environmental Reviews, Commentaries, Book Reviews, News Articles, Points of View, and Editorials. These manuscripts will generally range from 50 to 500 words. Letters to the Editor will not be peer-reviewed, but they may be used to solicit responses from others for simultaneous publication.

The editors welcome inquiries about manuscript ideas. You may also contact the editors to request exceptions to the word count limits given above. Contact information can be found at the end of these instructions.

Manuscript Preparation and Submission

1. Membership in the National Association of Environmental Professionals is not a requirement for publication in *Environmental Practice*.
2. Send the original and four clear copies of Research Articles, Environmental Reviews, and Commentaries. Send the original and two clear copies of Book Reviews, News Articles, Points of View, and Letters to the Ed-

itor. Please indicate the kind of manuscript intended. Manuscripts should be sent to the editorial office at the address indicated at the end of these instructions.

3. Manuscripts should be organized as follows:

Cover sheet: Attach a cover sheet including manuscript title, author name(s); title or position; institutional affiliation; corresponding author address, telephone number, fax number, and e-mail address. All pages should be numbered, with the cover sheet as page 1. To facilitate blind peer reviews, author names and affiliations should appear only on the cover sheet.

Acknowledgments: Place on a separate sheet, located after the cover sheet. The study sponsors, if any, should be included in the acknowledgments.

Abstract: Research Articles, Environmental Reviews, and Commentaries should be accompanied by an abstract of no more than 200 words on a separate sheet. Abstracts should be a stand-alone summary of the manuscript's central findings and argument, not an overview of the manuscript's outline. The title of the manuscript should appear at the top of the abstract page.

Text: Research Articles and Environmental Reviews prepared by authors schooled in the natural and social sciences will typically have separate sections for Introduction, Methods, Results, Discussion, and Conclusions. Authors schooled in the legal and humanistic disciplines are likely to organize their materials in a way that illuminates the logical connections between different elements of the argument. In all cases, use appropriate section headings to help guide the reader.

All text, including references, tables, legends, and quotations, should be typed, double-spaced, on one side of white paper with margins of at least one inch on all sides, and without right-hand justification. Figures should be clear prints of electronic versions or good copies of original artwork.

Documentation and references: Authors may use either author-date notation or endnotes. Author-date notation is widely

used in the natural and social sciences. References are cited in text like so: "Smith (1990) showed . . ." or "as seen elsewhere (Smith, 1990)." References cited in text are listed alphabetically in a References section at the end of the manuscript. The following examples illustrate an appropriate style for most kinds of documents listed in the References section:

Article in journal

Author, A. B., and C. D. Author. 1997. Title of Article. *Name of Journal* Volume(Issue): starting page number-ending page number.

Article or chapter in book

Author, A. B., C.D. Author, and E. F. Author. 2000. Title of Article or Chapter. In *Title of Book*, G. H. Editor and I. J. Editor, eds., 4th edition. Publisher, Place of Publication, starting page number-ending page number.

Book

Author, A. B., and C. D. Author. 2001. *Title of Book*. Publisher, Place of Publication, total pages in book.

Edited book

Editor, A. B., and C. D. Editor, eds. 1999. *Title of Book*. Publisher, Place of Publication, total pages in book.

Dissertation or thesis

Author, A. B. 1998. *Title*, (PhD Dissertation) OR (Master's Thesis). University, City, State, total pages in document.

Reports by author

Author, A. B. 1993. *Title of report*. Report Number, Agency, City, State, total pages in report.

Reports by agency

Name of agency. 1995. *Title of report*. Report Number, City, State, total pages in report.

Personal communication (e.g. letter, telephone, e-mail, interview)

Person, A. B. 1999. Personal communication, Day-Month. Person's title or position, Person's agency or organization, City, State.

Web sites

Name of Site/Subsection of Site. Year of access to site. *Title of subsection*. URL address of site. Day-Month of access to site.

Endnotes consist of a superscript number in the text and a corresponding, numbered list of citations placed at the end of the text. This method of documentation is frequently used in historical, legal, or humanistic writing, and it is useful for citations that must contain more than one reference. Endnotes with more than one reference should be separated by semi-colons. Avoid, if possible, use of endnotes simply to further explain the text rather than to provide documentation. Subsequent references to a source should give the last name of the author(s), shortened title, and relevant page(s). Do not use *op. cit.*, *ibid*, *idem*, *infra*, or *supra*. See *The Chicago Manual of Style* for details not addressed here. The following examples illustrate proper style for endnotes:

Article in journal

A. B. Author and C. D. Author, 2000, "Title of Article," *Name of Journal* Volume (Issue):starting page number-ending page number.

Article or chapter in book

A. B. Author, C. D. Author, and E. F. Author, 1998, "Title of Article or Chapter," in *Title of Book*, G. H. Editor and I. J. Editor, eds., 4th edition, Publisher, Place of Publication, starting page number-ending page number.

Book

A. B. Author and C. D. Author, 1999, *Title of Book*, Publisher, Place of Publication, total pages in book.

Edited book

A. B. Editor and C. D. Editor, eds., 2001, *Title of Book*, Publisher, Place of Publication, total pages in book.

4. Authors are encouraged to illustrate their work with tables, figures, maps, and photographs. Authors of accepted manuscripts must provide original illustrations in camera-ready form. Color photographs will be included only if they are essential for the integrity of the manuscript; all costs of color photos must be paid by the author(s). Tables should not duplicate data also provided in figures or in the text. For tables of data that might be of value only to a few readers, authors should consider indicating that the data is available on request from

the author. Table and Figure legends should make them understandable without reference to the text. Tables and Figures must be referred to in the text. The desired location of each Table and Figure should be indicated in the text.

5. This journal resists the use of acronyms and other forms of abbreviation. As a general rule, an acronym is appropriate only (a) if it is used frequently in a portion or all of a manuscript or (b) if the acronym itself has entered common usage in everyday conversation (e.g., "USEPA" for "United States Environmental Protection Agency"). The use of more than two different acronyms in one manuscript is unlikely to be acceptable.

6. Use the International System of Units (SI) or metric units. If necessary for clarity or common usage, other units may be included in parentheses immediately following the acceptable units.

7. *Environmental Practice* uses a double-blind peer-review process. The reviewer will not know the identity or location of the author(s), and the author(s) will receive reviewer's comments without the reviewer's identity or location. Authors are invited to submit names of appropriate reviewers, but the final choice of reviewers lies with the editor. Authors will be notified of the disposition of their manuscript as soon as possible. The goal of this journal is to have a decision to the author(s) within 4 months of receipt of manuscript.

8. Upon acceptance of manuscripts, authors will be requested to send the editorial office an electronic version of the manuscript as well as two revised paper copies. Please contact the editorial office for exceptions: an author's access to computing equipment will not be a factor in the publication of a manuscript.

9. The final version of the manuscript (both electronic and paper copies) should include a short biographical sketch of each author (100 words or less per author).

10. All authors must sign the "Assignment of Copyright" agreement before the manuscript can be published. (US government officers or employees whose submitted work was prepared as part of their employ-

ment are exempt from the transfer requirement, but they must certify their status.) This transfer agreement enables the National Association of Environmental Professionals to protect the copyrighted material for the authors, but authors do not thereby relinquish proprietary rights or rights to use their work in the future. The copyright transfer covers the exclusive rights to reproduce and distribute the manuscript, including reprints, photographic reproduction, microfilm, electronic versions, and all other reproduction methods, plus translations into languages other than English.

11. The corresponding author will receive page proofs for final proofreading shortly before the article is scheduled for publication. Authors bear full responsibility for accuracy and completeness of their material. Any corrections (not revisions) should be made at this time, and the page proofs must be returned to the publisher within 72 hours of receipt. Extensive revisions are strongly discouraged at this stage of the publication process and, if permitted by the editor and publisher, are likely to result in special charges to the author.

12. It is a condition of publication that manuscripts submitted to this journal have not been published previously, in part or in whole, in a peer-reviewed journal. All prior presentations of the manuscript material must be disclosed to the editor at the time of initial manuscript submission. It is also a condition of publication that the author(s) will not simultaneously submit or publish the material elsewhere.

13. Authors will receive a reprint order form when they are sent page proofs. If reprints are desired, the completed form along with payment must be returned to the publisher at the same time page proofs are returned.

14. This journal features a full-color illustration on the cover of each issue, the cost of which is borne by the journal. The cover is available to any contributor whose manuscript is accepted for publication, provided the photographic material is original, not previously published, and of high quality. For each submission, two 5 x 7 in (13 x 18 cm) or larger prints should be sent to the editorial office after the manuscript

has been accepted for publication. Please do not write on the back of the photos. On a separate page, indicate the top of the image and provide a brief caption and credit. Note that the submission should be in sharp focus.

MEMBERSHIP CATEGORIES

General Membership is open to individuals who have earned an undergraduate or graduate degree and have at least three years experience working in the environmental field. General members may vote and hold office.

Associate Membership is open to individuals who do not meet the requirements for general membership.

Senior Membership is open to individuals 65 years and over. Seniors are entitled to all privileges of general membership at a reduced dues rate.

Student Membership is limited to full-time students pursuing an environmental degree. A copy of a current transcript and college ID is required and must accompany the application.

Spousal Membership is open to individuals whose spouse is a general or associate member. Spousal members may vote and hold office.

Send payment to: **NAEP, PO Box 2086, Bowie, MD 20718**
(Make checks payable to NAEP)

With a credit card payment, applications may be faxed to 301-860-1141.

NAEP CHAPTERS

In addition to membership in the National Association, NAEP maintains a network of regional, state, local, and student chapters that offer additional opportunities for professional growth. Check below if you would like to join one of the chapters and include applicable dues in addition to the amount for NAEP membership.

**National Association of Environmental Professionals
Code of Ethics and Standards of Practice For Environmental Professionals**

The objectives of Environmental Professionals are to conduct their personal and professional lives and activities in an ethical manner. Honesty, justice and courtesy form moral philosophy which, associated with a mutual interest among people, constitute the foundation of ethics. Environmental Professionals should recognize such a standard, not in passive observance, but as a set of dynamic principles guiding their conduct and way of life. It is their duty to practice their profession according to this Code of Ethics.

As the keystone of professional conduct is integrity, Environmental Professionals will discharge their duties with fidelity to the public, their employers, clients, and with fairness and impartiality to all. It is their duty to interest themselves in public welfare, and to be ready to apply their special knowledge for the benefit of mankind and their environment.

Creed

The objectives of an Environmental Professional are:

1. to recognize and attempt to reconcile societal and individual human needs with responsibility for physical, natural, and cultural systems.
2. to promote and develop policies, plans, activities, and projects that achieve complementary and mutual support between natural and man-made, and present and future components of the physical, natural and cultural environment.

Ethics

As an Environmental Professional I will:

1. be personally responsible for the validity of all data collected, analyses performed, or plans developed by me or under my direction. I will be responsible and ethical in my professional activities.
2. encourage research, planning, design, management and review of activities in a scientifically and technically objective manner. I will incorporate the best principles of the environmental sciences for the mitigation of environmental harm and enhancement of environmental quality.
3. not condone misrepresentation of work I have performed or that was performed under my direction.
4. examine all of my relationships or actions which could be legitimately interpreted as a conflict of interest by clients, officials, the public or peers. In any instance where I have a financial or personal interest in the activities with which they are directly or indirectly involved, I will make a full disclosure of that interest to my employer, client, or other affected parties.
5. not engage in conduct involving dishonesty, fraud, deceit, or misrepresentation or discrimination.

6. not accept fees wholly or partially contingent on the client's desired result where that desired result conflicts with my professional judgement.

Guidance for Practice as an Environmental Professional

As an Environmental Professional I will:

1. encourage environmental planning to begin in the earliest stages of project conceptualization.
2. recognize that total environmental management involves the consideration of all environmental factors including: technical, economic, ecological, and sociopolitical and their relationships.
3. incorporate the best principle of design and environmental planning when recommending measures to reduce environmental harm and enhance environmental quality.
4. conduct my analysis, planning, design and review my activities primarily in subject areas for which I am qualified, and shall encourage and recognize the participation of other professionals in subject areas where I am less experienced. I shall utilize and participate in interdisciplinary teams wherever practical to determine impacts, define and evaluate all reasonable alternatives to proposed actions, and assess short-term versus long-term productivity with and without the project or action.
5. seek common, adequate, and sound technical grounds for communication with and respect for the contributions of other professionals in developing and reviewing policies, plans, activities, and projects.
6. determine that the policies, plans, activities or projects in which I am involved are consistent with all governing laws, ordinances, guidelines, plans, and policies, to the best of my knowledge and ability.
7. encourage public participation at the earliest feasible time in an open and productive atmosphere.
8. conduct my professional activities in a manner that ensures consideration of technically and economically feasible alternatives.

Encourage Development of the Profession

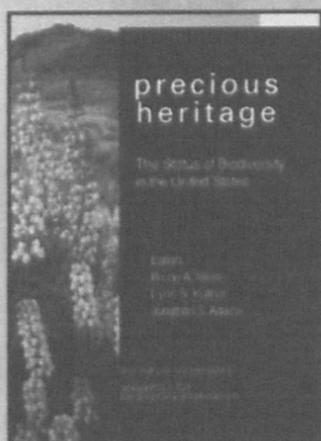

As an Environmental Professional I will:

1. assist in maintaining the integrity and competence of my profession.
2. encourage education and research, and the development of useful technical information relating to the environmental field.
3. be prohibited from lobbying in the name of the National Association of Environmental Professionals.
4. advertise and present my services in a manner that avoids the use of material and methods that may bring discredit to the profession.

PRECIOUS HERITAGE

The Status of Biodiversity in the United States

Edited by Bruce A. Stein, Lynn S. Kutner, and Jonathan S. Adams

"In *Precious Heritage* some of the leading experts on the subject present the most comprehensive and accessible account of the state of the American biota to date. They invite us to turn inward, not by abandoning global conservation but by conserving our own fauna and flora in a manner that will set a shining example for the rest of the world."

GLOBAL ENVIRONMENTAL CRISES

An Australian Perspective

Second Edition

Graeme Aplin, Paul Beggs, Gary Brierley, Helen Cleugh, Peter Curson, Peter Mitchell, Andrew Pitman, and David Rich

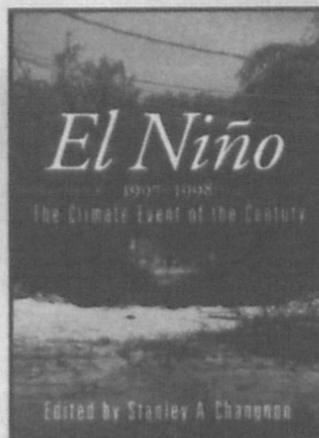

This book explores the diverse environmental problems we currently face. Emphasizing problems in Australia, this book is built around case studies focusing on health, population, land, water, forests, the atmosphere, and urbanization. This new edition includes substantial new data, extensive coverage of global environmental problems, and new material on population, water, and international cooperation.

EL NIÑO, 1997-1998

The Climate Event of the Century

Edited by Stanley A. Changnon

This book presents what happened in the United States to allowed El Niño to become a household word and a "climate event of the century" for scientists. It is a "snapshot" of events during the 14-month period when El

Niño developed in the spring of 1997 and ended in the early summer of 1998. Its particular focus is on information that appeared in the media and on the Internet—the two major information sources during the event.

ENVIRONMENTAL CHANGE

Fourth Edition

Andrew Goudie and Stephen Stokes

This concise modern survey examines the many recent interdisciplinary developments in the study of environmental changes over the last three million years. It is the fourth edition of this acclaimed book and has been completely revised to reflect the substantial amount of new information on techniques for environmental reconstruction, glaciation in lower altitudes and the southern hemisphere, climatic changes in the twentieth century, and the causes of environmental change and to provide an up-to-

date analysis of this important and politicized topic.

STANDARD SOIL METHODS FOR LONG-TERM ECOLOGICAL RESEARCH

Edited by G. Philip Robertson, David C. Coleman, Caroline S. Bledsoe, and Phillip Sollins

This second volume in the *Long-Term Ecological Research Network Series* provides a standardized set of protocols for measuring soil properties. Its goal is to facilitate cross-site synthesis and evaluation of ecosystem processes. It is the first broadly based compendium of methods and will be an invaluable resource for ecologists, agronomists, and soil scientists.
