Experimental Agriculture publishes the results of experimental work in animal and crop husbandry, with an emphasis on research carried out in the warmer climates of the world. It also includes accounts of new experimental techniques, discussions of specific problems met in countries where agricultural production is developing rapidly, review articles on new developments in scientific agriculture, and occasional papers on technical, economic and sociological aspects of farming systems. The journal is the successor to *The Empire Journal of Experimental Agriculture*.

Each annual volume comprises four parts (published in January, April, July and October) plus an index.

Subscriptions may be sent to any bookseller or subscription agent or direct to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1. Subscriptions in the U.S.A. and Canada should be sent to the American branch of the Press, 32 East 57th Street, New York, N.Y. 10022. The subscription price is 75s. net (including postage) for an annual volume (\$13.50 in the U.S.A.), payable in advance; separate parts cost 25s. net or \$4.50 each (plus postage).

Back Volumes. Inquiries for Vols. 1-32 of *The Empire Journal of Experimental Agriculture* should be addressed to Wm Dawson & Sons Ltd, 16 West Street, Farnham, Surrey. Previously published parts of *Experimental Agriculture* are available from the London or New York offices of the Cambridge University Press.

NOTES FOR CONTRIBUTORS

Contributions will be welcomed from scientists of all nationalities, particularly those working in tropical and sub-tropical countries where up-to-date techniques of agricultural experimentation are helping in the rapid development of more modern methods of farm production. Contributions, which must be written in English, should be sent to the Editor, Professor J. P. Hudson, University of Nottingham School of Agriculture, Sutton Bonington, Loughborough, England.

Conditions of acceptance. Submission of a paper will be taken to imply that the material has not previously been published, and is not being considered for publication elsewhere. Papers published in *Experimental Agriculture* may not be reprinted or published in translation without permission from the Editor, given on behalf of the Editorial Board.

General lay-out. Before having their manuscripts typed contributors are asked to look carefully at the lay-out of

TROPICAL AGRICULTURE

THE JOURNAL OF THE
IMPERIAL COLLEGE OF TROPICAL AGRICULTURE
and
FACULTY OF AGRICULTURE
UNIVERSITY COLLEGE OF THE WEST INDIES

*General Editor: H. K. ASHBY, M.A., DIP. AGRIC., A.I.C.T.A.
7 Linton Road, Oxford*

OCTOBER 1966

CONTENTS

- The Conversion of Standard Fruit Company Banana Plantations in Honduras from the Gros Michel to the Giant Cavendish Variety *H. H. V. Hord*
- Some Notes on Dwarf Coconut Palms in Jamaica *R. A. Whitehead*
- Mineral Composition of Sugar-cane Tissues as Affected by Applications of Lime and Phosphate in Hawaii *A. J. Rixon and G. D. Sherman*
- A Grass Cover for the Upland Soils of the Kongwa Plain, Tanganyika
M. A. Owen and H. W. Brzostowski
- The Phosphorus and Potassium Status of Some Trinidad Soils *C. C. Weir*
- Run-off and Soil Loss on Two Small Watersheds in the Northern Range, Trinidad
E. P. Alleyne and M. J. Percy
- A Squash Technique for Banana Root-tips *N. G. Vakili*
- Assessment of Rice Stem Borer Infestation: a Case Study in North Malaya
L. T. Kok and G. Varghese
- Chemical Control of Root-knot Nematodes Parasitic on Tea Seedlings in Northeast India
T. D. Mukerjea
- The Effect of Gibberellic Acid on the Germination of Papaya Seeds and Subsequent Seedling Growth
E. K. Chacko and R. N. Singh
- A Note on the Response of Crop Seeds to Pre-sowing Treatment with B-nine
D. Mishra and S. K. Mohanty
- The Effect of 'Dancing' on the Quality of Fermented Cocoa *N. Maravalhas*

CROP SCIENCE

Crop breeders, plant geneticists and physiologists, and workers in related areas will find *Crop Science* a source of valuable articles in their branches of science. This bimonthly journal carries reports of research in the genetics, physiology, ecology, breeding and management of field crops, turf-grasses, pastures and ranges, and in seed technology. It is published by the Crop Science Society of America.

\$16.00 per year in U.S. and Canada.
\$17.00 per year elsewhere.

THE ANNALS OF APPLIED BIOLOGY

INDEX TO VOLUMES 1-50

This work provides separate author and subject indexes to the first fifty volumes of the *Annals of Applied Biology* (1914-1962). 240 pages long, it contains references to more than 2,500 papers. It will be an invaluable tool for all applied biologists.

40s. net (U.S.A. \$6.00)

Back volumes

Now is the time to check that your set of the *Annals* is complete. All past volumes of the *Annals* are either currently available, or will be reprinted. Volumes 1-50 are £6 (U.S.A. \$18.50) each except for the special Jubilee volume (42) which costs £1 5s. (U.S.A. \$4.00), and Volumes 51-54 are £4 10s. (U.S.A. \$15.00) each.

Orders should be sent to your usual bookseller or subscription agent, or direct to Cambridge University Press, Bentley House, 200 Euston Road, London N.W.1; orders in the United States and Canada should be sent to Cambridge University Press, American Branch, 32 East 57th Street, New York, N.Y. 10022, U.S.A.

The Journal of AGRICULTURAL SCIENCE

(Established 1905)

Edited by G. D. H. Bell, K. L. Blaxter, G. W. Cooke, John Hammond, Jr.,
Prof. Sir J. B. Hutchinson, Sir Bernard Keen, H. L. Penman,
H. H. Rogers, E. W. Russell and F. Yates

Contents of Volume 67, No. 2, October 1966

- BLORE, T. W. D. Further studies of water use by irrigated and unirrigated Arabica coffee in Kenya.
- HODGSON, J. and SPEDDING, C. R. W. The health and performance of the grazing animal in relation to fertilizer nitrogen usage. I. Calves.
- JUMA, K. H. and FARAJ, M. Factors affecting birth weights of Awassi lambs.
- LEES, J. L. Variations in the time of onset of the breeding season in Clun ewes.
- ALEXANDER, G. and WILLIAMS, D. Teat-seeking activity in new-born lambs: the effects of cold.
- MORRIS, J. G. Finishing steers on sorghum grain and sorghum silage. Effects of grain-to-roughage ratio, urea supplementation and hexoestrol implantation on rate of body-weight gain, efficiency and carcass compositions.
- CAMPBELL, A. G. Grazed pasture parameters. I. Pasture dry-matter production and availability in a stocking rate and grazing management experiment with dairy cows. II. Pasture-dry matter use in a stocking rate and grazing management experiment with dairy cows. III. Relationships of pasture and animal parameters in, and general discussion of a stocking rate and grazing management experiment with dairy cows.
- GARNER, H. V. Experiments on the direct, cumulative and residual effects of town refuse manures and sewage sludge at Rothamsted and other centres 1940-1947.
- BOND, D. A., FYFE, J. L. and TOYNBEE-CLARKE, GILLIAN. Yields of mixtures of single-cross hybrid field beans (*Vicia faba* L.) with one of the parental inbred lines.
- EDDOWES, MAURICE. Chemical weed control in potatoes.
- LEWIS, JOSEPH. The relationship between seed yield and associated characters in meadow fescue (*Festuca pratensis*).
- ZALESKI, A. White clover investigations. III. Effect of irrigation on seed production.
- MACER, R. C. F. and VAN DEN DRIESSCHE, M. Yellow rust (*Puccinia striiformis* Westend.) of barley in England, 1960-65.
- GARNER, H. V. Comparisons of farmyard manure, sewage sludge, and other organic manures tested on potatoes and a succeeding cereal crop at Rothamsted.
- LACHOVER, D. and FELDHAY, HELENA. The evaluation of potassium metaphosphate as a source of potassium for potatoes with special references to foliar diagnosis, yield and quality of tubers.

Issued at two-monthly intervals in parts of about 136 pages with plates and figures, three parts constituting a volume, 2 volumes yearly
Subscription price 75s. per volume. Single parts 32s. 6d. net

ANIMAL PRODUCTION

Journal of the British Society of Animal Production

Contents of Volume 8, Part 3, October 1966

INCLUDE

- JONES, MADDEVER, COURT and PHILLIPS. The time taken by cows to eat concentrates.
- BICHARD and COOPER. Analysis of production records from a lowland sheep flock: 1.
- MOAV. Specialised sire and dam lines. III: Choice of the most profitable parental combination.
- MOAV and HILL. Specialised sire and dam lines; IV. Selection within lines.
- BROADBENT and WATSON. Factors governing the shape of the growth curve of Suffolk × Welsh lambs.
- WIESER, PRESTON and MACDEARMID. Intensive beef production. 8. The effect of chlortetracycline on barley beef cattle.
- HINKS. Selection practices in dairy herds. I. and II.
- DOORNENBAL and MARTIN. The association between commercial cut-out yield and gross chemical composition in market pigs.
- LODGE, ELSLEY and MACPHERSON. The effects of level of feeding of sows during pregnancy. II.
- ELSLEY, ANDERSON, McDONALD, MACPHERSON and SMART. A comparison of the liveweight changes, nitrogen retention and carcass composition of pregnant and non-pregnant gilts.
- SLEE. Variation in the responses of shorn sheep to cold exposure.
- HUNTER. The effect of superovulation on fertilisation and embryonic survival in the pig.

The Journal is published three times a year, but COMMENCING 1967 WILL BE PUBLISHED QUARTERLY IN FEBRUARY, MAY, AUGUST and NOVEMBER.

The 1966 annual subscription rate is 65s (U.S.A. \$11.00) single copy 25s (U.S.A. \$4.00). COMMENCING 1967 THE SUBSCRIPTION RATE WILL BE 90s (U.S.A. \$14.00). Orders and subscriptions may be sent to any Bookseller or direct to:

**NEW
FROM
SHELL**

**END APHIDS, MITES, THRIPS ON
VEGETABLES, COTTON, FRUIT WITH
SYSTEMIC, PERSISTENT, ACTIVE BIDRIN**

Bidrin is Shell's new organo-phosphorus insecticide. It is systemic and has particular advantages for many crops. For example, Bidrin's extremely wide spectrum of activity includes the easy control of aphids, mites and thrips on vegetables, citrus fruits, cotton and seedcrops. Bidrin is equally useful in dealing with stem borers and leaf hoppers on rice – scale insects on citrus crops – and even the elm bark beetle. Bidrin kills on contact then continues to control biting and sucking insects for up to two to three weeks. Bidrin may be used to within four weeks before harvest, by then it has completely broken down and crops are ready for consumption. Current trials are proving that Bidrin may have many other valuable uses.

For further details about Bidrin contact your Shell company.
