International Psychogeriatrics

Scope and contributions

International Psychogeriatrics is written and read by those doing clinical, teaching, and research work with older people. It is the official journal of the International Psychogeriatric Association (IPA) and is published by Cambridge University Press, Cambridge, UK. Although it is primarily concerned with psychogeriatrics, the journal welcomes contributions from all concerned with the field of mental health and aging. Original research papers are of particular weight.

Contributions include original research articles, case reports, reviews of the literature, book reviews, letters to the editor, and editorials. Apart from authorial and book reviews, which are commissioned, contributions to International Psychogeriatrics are unsolicited, written and submitted by authors. Papers are reviewed by two or more reviewers selected by the Editor-in-Chief. Authors, present or absent, half of the papers submitted are accepted for publication. The journal's Science Citation Index impact factor is 1.89 (2013). Submission of a paper implies that it is neither under consideration for publication elsewhere, nor previously published in English. Manuscripts must be formatted double-spaced with ample margins on all sides and the pages should be numbered. International Psychogeriatrics uses the spelling of American English. Manuscripts written by those whose primary language is not English should be submitted carefully for language prior to submission. The journal has a Language Assistance Panel consisting of both native English speakers willing to check manuscripts for English prior to submission, and bilingual experts willing to assist with the translation of manuscripts into English. Further details including contact information for individual panel members can be found at both the journal and IPA websites (journals.cambridge.org and ipaj-asan.org).

An up to date version of the journal's instructions for contributors can be found at the International Psychogeriatrics website journals.cambridge.org. Please read these instructions carefully before submitting articles. Articles that are not prepared in accordance with these guidelines will be returned to authors.

Manuscripts should be submitted online via our manuscript submission and tracking site, http://ips.manuscriptcentral.com/ipg/. Full instructions for electronic submission are available directly from this site.
