Short Communication
Importance of early nutritional screening in patients with gastric cancer.
C. Gavazzi, S. Colatruglio, A. Sironi, V. Mazzaferro & R. Miceli
1773–1778

Molecular Nutrition
Mitogen-activated protein kinase mediates the apoptosis of highly metastatic human non-small cell lung cancer cells induced by isothiocyanates.
H. Yan, Y. Zou, B. Liu, H. Wu, X. Li, X. Wu, Q. Zhou & K. Xue
1779–1791

Effect of anthocyanins on expression of matrix metalloproteinase-2 in naproxen-induced gastric ulcers.
S.-J. Kim, X.-S. Park, H.-D. Park & H.-I. Chang
1792–1801

Bone-protective effects of bioactive fractions and ingredients in Sambucus willowii HANCE.
H.-H. Xuan, Y. Dao, H.-Y. Wan, M.-S. Wong & X.-S. Han
1802–1809

Supplement of bamboo extract lowers serum monosaccharide chemoattractant protein-1 concentration in mice fed a diet containing a high level of saturated fat.
J. K. Heja, W. Liu, M. J. Berry & J. Dunn
1810–1813

Hepatic expression of sodium-dependent vitamin C transporters: ontogeny, subcellular distribution and effect of chronic liver diseases.
1814–1825

Effect of the fat composition of a single high-fat meal on inflammatory markers in healthy young women.
M. C. W. Myhrstad, I. Narverud, V. H. Telle-Hansen, T. Karhu, T. J. Lund, K.-H. Herzig
1826–1835

Low-molecular-weight fucoidan regulates myogenic differentiation through the mitogen-activated protein kinase pathway in C2C12 cells.
K.-J. Kim, O.-H. Lee & B.-Y. Lee
1836–1844

Metabolism and Metabolic Studies
Effects of dietary protein content and 2-hydroxy-4-methylthiobutanoic acid or DL-methionine supplementation on performance and oxidative status of broiler chickens.
Q. Swennen, P.-A. Geraert, Y. Mercier, N. Everaert, A. Stinckens, H. Willemsen, Y. Li, E. Decuyper & J. Bayse
1845–1854

Tannic acid is more effective than clofibrate for the elevation of hepatic β-oxidation and the inhibition of 3-hydroxy-3-methyl-glutaryl-CoA reductase and aortic lesion formation in apo E-deficient mice.
1855–1863

Human and Clinical Nutrition
Digestive physiological outcomes related to polydextrose and soluble maize fibre consumption by healthy adult men.
1864–1871

Reported zinc, but not copper, intake influence whole-body bone density, mineral content and T score responses to zinc and copper supplementation in healthy postmenopausal women.
F. H. Nielson, M. C. Jakubski, L. E. Johnson & Z. K. (Jolanta) Ronge
1872–1879

Health effects of green tea catechins in overweight and obese men: a randomised controlled cross-over trial.
A. L. Brown, J. Lane, C. Holbrook, B. Nicek, A. E. Meyer & T. Dodd
1880–1889

Structure modification of a milk protein-based model food affects postprandial intestinal peptide release and fullness in healthy young men.
1890–1898

Dietary Surveys and Nutritional Epidemiology
National Diet and Nutrition Survey: UK food consumption and nutrient intakes from the first year of the rolling programme and comparisons with previous surveys.
1899–1914
The British Journal of Nutrition is an international, peer-reviewed journal publishing original papers, review articles, short communications and technical notes on human and clinical nutrition, animal nutrition and basic science as applied to nutrition. Correspondence is encouraged in a Nutrition Discussion Forum. The Journal recognizes the multidisciplinary nature of nutritional science and encourages the submission of material from all of the specialties involved in research and practical clinical. The Journal also publishes supplements on topics of particular interest.

Deputy Editors
P Bellido, INRA, University of Paris, Bobigny, France
D R Jacobs Jr, School of Nutritional Sciences, University of Minnesota, Minneapolis, MN, USA
R J Wallace, Gut Health Programme, Roswell Institute of Nutrition and Health, University of Aberdeen, Aberdeen, UK
S J Whiting, College of Pharmacy and Nutrition, University of Saskatchewan, Saskatoon, Sask., Canada

Reviews Editors
D J Millward, Faculty of Health and Medical Sciences, University of Surrey, UK
P Aggett, School of Medicine and Health, Lancaster University, Lancaster, UK

Editorial Board
M Makrides, Women's and Children's Health Research Institute and University of Adelaide, Adelaide, Australia

Supplement Editors
J Woodhouse, Nutrition and Metabolism Group, Centre for Public Health, Queen's University, Belfast, UK

Editor in-Chief
P C Calder, School of Medicine, University of Southampton, Southampton, UK

The British Journal of Nutrition is available online to subscribers at journals.cambridge.org/bjn. Tables of contents and abstracts are available free at the same website.

The British Journal of Nutrition is an international, peer-reviewed journal publishing original papers, review articles, short communications and technical notes in English in all branches of nutritional science. Authors should note that they (or their institutions) now retain the copyright of their material published in the British Journal of Nutrition. As a contributor you are asked to follow the guidelines set out below. For detailed information on the presentation of the technical content of your paper please see the full version of the Directions to Contributors, which can be downloaded from the Nutrition Society website (http://www.nutrition-society.org). Prospective authors may also contact the Publications Office directly on +44 (0)20 7605 6555 (telephone), +44 20 7602 1756 (fax), or edoffice@nusoc.org.uk (email).

Papers should be accompanied by a statement to the effect that the conditions laid down in the full Directions to Contributors are accepted. The statement should affirm that the submission represents original work that has not been published previously and which is not currently being considered by another journal. It should also confirm that each author has seen and approved the contents of the submitted paper. At the time of acceptance the authors provide a completed copy of the Licence to Publish (in case of copyright transfer). The Licence to Publish is available on the Nutrition Society website (http://www.nutrition-society.org). All relevant financial interests should be declared.

Text. Papers should be submitted with 1.5 line spacing and margins of at least 2 cm on each side. Text should be printed without underlining, bold or italics except for scientific names. Standard abbreviations (e.g., Fig and Figs) and SI units should be used. Typescripts can be submitted as Word, WordPerfect, EPS, Text, Postscript or RTF files. A Word processing format is required for production purposes once papers have been accepted. When substantial revisions are required to typescripts, authors are given the opportunity to do this on one minor issue. The first page should include an informative abstract, written as a single paragraph. It should be informative and should not exceed 250 words.

Title Page. The first page should include a concise, informative title together with the names and addresses of the authors. The title should be typed on a separate page, one page for each Table, at least 1 inch from the top. Tables should be reduced to the simplest form, and should not include redundant data or figures. It should be simple in content and intelligible without reference to the text of the figures, and should not exceed 250 words.

Tables. Tables should be reduced to the simplest form, and should not include redundant data or figures. They should be typed on separate pages, one page for each Table, at the end of the article and carry headings describing their content. The original illustrations should accompany the submitted typescript. Text figures, line drawings, computer-generated figures and graphs should be of sufficient size and quality to allow for reproduction half or two-thirds. Half-tone photographs are acceptable where they clearly contribute to the text. All figures should be numbered and legends should be provided.

Note that authors will be charged 350 GBP for the publication of colour figures. Authors from countries entitled to free journal access through HINARI will be exempt from these charges.

References. References should be based on the numbered reference system. When an article has more than ten authors, only the names of the first three should be given followed by et al.; give abbreviated journal titles and confirm with the author.

Citations should be numbered consecutively in the order in which they first appear in the text using superscript Arabic numerals in parentheses, e.g., “The conceptual difficulty of this approach has recently been highlighted” (2). If a reference is cited more than once the same number should be used each time.

References. Authors are asked to submit the names of up to four reviewers who would be well qualified to review the paper; however, no more than one such reviewer will be used. The addresses and email addresses of the named reviewers should be given.

Proofs. PDF page proofs will be emailed to authors for checking, and should be returned within 3 days by fax or express mail to the BJN Production Editor, Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, UK; fax +44 1223 325802, email bjnproduction@cambridge.org.

Typescripts. The British Journal of Nutrition operates an on-line submission and reviewing system (eJournalPress). Authors should submit to the following address: http://bjn.msubmit.net/ If any difficulties are encountered please contact the Publications Office (details above) immediately.

Contents

Short Communication

Importance of early nutritional screening in patients with gastric cancer.
C. Gavazzi, S. Colatruglio, A. Sironi, V. Mazzaferraro & R. Miceli
1773–1778

Molecular Nutrition

Mitogen-activated protein kinase mediates the apoptosis of highly metastatic human non-small cell lung cancer cells induced by isothiocyanates.
H. Yan, Y. Zha, B. Liu, H. Wu, Y. Li, X. Wu, Q. Zhou & K. Xu
1779–1791

Effect of anthocyanins on expression of matrix metalloproteinase-2 in naproxen-induced gastric ulcers.
S.-J. Kim, Y. S. Park, H.-D. Paik & H. J. Chang
1792–1801

Bone-protective effects of bioactive fractions and ingredients in Sambucus williamsii HANCE.
1802–1809

Supplement of bamboo extract lowers serum monocyte chemoattractant protein-1 concentration in mice fed a diet containing a high level of saturated fat.
J. K. Higa, W. Liu, M. J. Berry & J. Panee
1810–1813

Hepatic expression of sodium-dependent vitamin C transporters: ontogeny, subtissular distribution and effect of chronic liver diseases.
1814–1825

Effect of the fat composition of a single high-fat meal on inflammatory markers in healthy young women.
1826–1835

Low-molecular-weight fucoidan regulates myogenic differentiation through the mitogen-activated protein kinase pathway in C2C12 cells.
K.-J. Kim, O.-H. Lee & B.-Y. Lee
1836–1844

Metabolism and Metabolic Studies

Effects of dietary protein content and 2-hydroxy-4-methylthiobutanoic acid or dl-methionine supplementation on performance and oxidative status of broiler chickens.
Q. Swennen, P.-A. Geraert, Y. Mercier, N. Everaert, A. Stinckens, H. Willemsen, Y. Li, E. Decuyper & J. Bayse
1845–1854

Tannic acid is more effective than clofibrate for the elevation of hepatic β-oxidation and the inhibition of 3-hydroxy-3-methyl-glutaryl-CoA reductase and aortic lesion formation in apo E-deficient mice.
1855–1863

Human and Clinical Nutrition

Digestive physiological outcomes related to polydextrose and soluble maize fibre consumption by healthy adult men.
1864–1871

Reported zinc, but not copper, intakes influence whole-body bone density, mineral content and T score responses to zinc and copper supplementation in healthy postmenopausal women.
F. H. Nielsen, H. C. Lukaski, L. K. Johnson & Z. K. (Fariba) Roughead
1872–1879

Health effects of green tea catechins in overweight and obese men: a randomised controlled cross-over trial.
A. L. Brown, J. Lane, C. Holyoak, B. Nicol, A. E. Mayes & T. Dadd
1880–1889

Structure modification of a milk protein-based model food affects postprandial intestinal peptide release and fullness in healthy young men.
1890–1898

Dietary Surveys and Nutritional Epidemiology

National Diet and Nutrition Survey: UK food consumption and nutrient intakes from the first year of the rolling programme and comparisons with previous surveys.
1899–1914
Estimated dietary intakes of flavonols, flavanones and flavones in the European Prospective Investigation into Cancer and Nutrition (EPIC) 24 hour dietary recall cohort.
