

Instructions to authors

Detailed instructions to authors are available online here:
[cambridge.org/core/journals/journal-of-glaciology/information](https://www.cambridge.org/core/journals/journal-of-glaciology/information)

The *Journal of Glaciology* publishes three types of paper:

- Articles - concerning new findings and theories, or new instruments and methods, in glaciology; or review articles that offer an up-to-date, coherent account of a glaciological subject that is developing rapidly or has been neglected
- Letters - identical in form and general content to Articles, but of reduced length, and carrying substantially reduced processing charges
- Communications - short pieces without abstracts that could be, e.g., comments on published articles/letters, book reviews, or short correspondence on topics of interest to the community

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

Length

Papers should be concise. Lines and pages should be numbered. Letters are limited to five *Journal* pages and Correspondences to two (one *Journal* page = about 1000 words).

Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English, not appropriate for the journal, or of inferior quality will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct in advance of online publication.

Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
 - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
 - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words

- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
 - be one or two column widths: up to 85 mm or up to 178 mm
 - not be in boxes
 - use strong black lines (avoid tinting if possible)
 - use SI units in labels
 - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
 - be set in MathType or advanced equation editor
 - NOT be embedded as graphics in the text
- Tables should
 - be numbered in Arabic
 - be referred to in text (as Table 1 etc.)
 - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
 - be concise
 - be complete and accurate, including doi numbers
 - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
 - be arranged in alphabetical order by first author's surname
 - include works accepted but not published as 'in press'
 - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or their funding body or institution.

The APC for non-IGS members is £1,360 for a regular article (of 6 published pages or more), £680 for a letter (of 5 published pages or fewer) and £310 for a communication (of 2 published pages or fewer). IGS members receive a 10% discount on these charges.

Figures quoted here are correct for 2022.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Journal of GLACIOLOGY

CONTENTS Vol 68 No 269 2022

417–430 Modelling the transition from grain-boundary sliding to power-law creep in dry snow densification

Elizabeth M. Morris, Lynn N. Montgomery and Robert Mulvaney

431–442 Shallow firn cores 1989–2019 in southwest Greenland's percolation zone reveal decreasing density and ice layer thickness after 2012

Åsa K. Rennermalm, Regine Hock, Federico Covi, Jing Xiao, Giovanni Corti, Jonathan Kingslake, Sasha Z. Leidman, Clément Miège, Michael Macferrin, Horst Machguth, Erich Osterberg, Takao Kameda and Joseph R. McConnell

443–456 A restitution method to reconstruct the 2001–13 surface evolution of Hurd Glacier, Livingston Island, Antarctica, using surface mass balance data

Darlington Mensah, Javier J. Lapazaran, Jaime Otero and Cayetana Recio-Blitz

457–472 Effects of meteorology and soil moisture on the spatio-temporal evolution of the depth hoar layer in the polar desert snowpack

Gautier Davesne, Florent Domine and Daniel Fortier

473–485 The sensitivity of Cook Glacier, East Antarctica, to changes in ice-shelf extent and grounding-line position

James R. Jordan, G. Hilmar Gudmundsson, Adrian Jenkins, Chris R. Stokes, Bertie W. J. Miles and Stewart S. R. Jamieson

486–502 A fully-coupled 3D model of a large Greenlandic outlet glacier with evolving subglacial hydrology, frontal plume melting and calving

Samuel J. Cook, Poul Christoffersen and Joe Todd

503–517 Basal stress controls ice-flow variability during a surge cycle of Hagen Bræ, Greenland

Øyvind A. Winton, Sebastian B. Simonsen, Anne M. Solgaard, Robert McNabb and Nanna B. Karlsson

518–532 Using bed-roughness signatures to characterise glacial landform assemblages beneath palaeo-ice sheets

Francesca A. M. Falcini, Maarten Krabbendam, Katherine A. Selby and David M. Rippin

533–546 Spatial variability and regional trends of Antarctic ice shelf surface melt duration over 1979–2020 derived from passive microwave data

Andrew Johnson, Regine Hock and Mark Fahnestock

547–556 Discovery of argon in air-hydrate crystals in a deep ice core using scanning electron microscopy and energy-dispersive X-ray spectroscopy

Tsutomu Uchida, Wataru Shigeyama, Ikumi Oyabu, Kumiko Goto-Azuma, Fumio Nakazawa, Tomoyuki Homma, Kenji Kawamura and Dorthe Dahl-Jensen

557–570 Crack propagation speeds in weak snowpack layers

Bastian Bergfeld, Alec van Herwijnen, Grégoire Bobillier, Eric Larose, Ludovic Moreau, Bertil Trottet, Johan Gaume, Janic Cathomen, Jürg Dual and Jürg Schweizer

571–590 Microstructure evolution of young sea ice from a Svalbard fjord using micro-CT analysis

Martina Lan Salomon, Sönke Maus and Chris Petrich

591–604 Drainage system and thermal structure of a High Arctic polythermal glacier: Waldemarbreen, western Svalbard

Jānis Karušs, Kristaps Lamsters, Ireneusz Sobota, Jurijs Ješkins, Pēteris Džeriņš and Andrew Hodson

605–617 Mass loss of the Antarctic ice sheet until the year 3000 under a sustained late-21st-century climate

Christopher Chambers, Ralf Greve, Takashi Obase, Fuyuki Saito and Ayako Abe-Ouchi

Letter

618–624 Mass loss of the Greenland ice sheet until the year 3000 under a sustained late-21st-century climate

Ralf Greve and Christopher Chambers

Published for the International Glaciological Society, Cambridge, UK

Cambridge Core
