

Maths Today

PETER REES and BRIAN HOLLAND

With the revolution in modern mathematics an established fact, and with a great deal of feedback from the Midlands Mathematical Experiment, it was learnt that the greatest area of dissatisfaction with existing texts lay in the middle and lower streams. It was therefore decided to adapt completely the existing MME course to these needs stressing the importance of practical as well as theoretical understanding and using language more easily comprehended by the lower ability student. *Maths Today* is, therefore, a mainstream course for secondary students in four volumes.

Each of the pupil's texts has an accompanying teacher's book with notes and answers. Written by teachers familiar with the problems of teaching the average ability child, in a lively and up-to-date style, the content is a good blend of traditional and modern mathematics. While pupils are encouraged to discover the pattern and structure of a subject for themselves, the step-by-step development enables weaker pupils to be guided through a particular topic. Each chapter of Books 1, 2 and 3 ends with examples and a complete section of Book 4 is devoted to a revision of the whole course.

**UNIVERSITY OF BIRMINGHAM
SCHOOL OF EDUCATION**

DEGREE OF B.PHIL(ED)

Mathematical Education

One year full-time course

1975-6

This is a post-experience course intended to meet the needs of all concerned with mathematics teaching in schools and colleges. The major component of the course will be an option in Curriculum and Teaching which will concentrate on Mathematical Education within the context of the school curriculum.

*Further details from: W. Curr, School of Education,
University of Birmingham, P. O. Box 363,

CAMBRIDGE INSTITUTE OF EDUCATION

**ADVANCED DIPLOMA IN
EDUCATIONAL STUDIES**

A one-year full-time course will be held in Cambridge during the academic year 1975-76 leading to the award of this diploma. Options available include

Mathematical studies

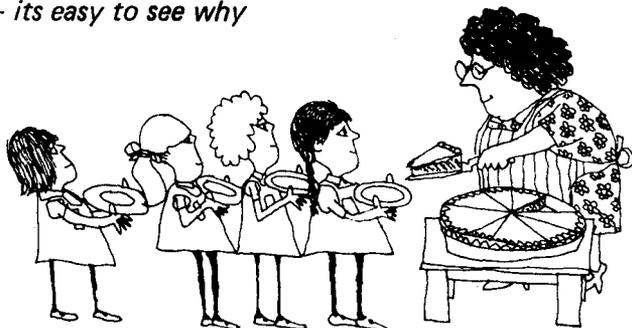

Mathematical education

Either may be offered in conjunction with a variety of other courses.

Experienced serving teachers, and lecturers in colleges of education, are invited to write for full particulars and forms of application to:

**The Deputy Secretary, Cambridge Institute of Education,
Shaftesbury Road, Cambridge, CB2 2BX.**

Two successful CSE Maths books by Tookey and Lewis & Ward
— its easy to see why

Pie Charts from Starting Statistics

Starting Statistics 75p

K Lewis and H Ward

Statistics is a branch of mathematics related to real situations and for this reason is particularly suited to discovery methods. Throughout the book pupils are encouraged to find out their own facts and discuss, analyse and justify any conclusions they may deduce from these facts; the practical aspects of the subjects are fully stressed and there is a strong emphasis on experimental work.

The text is lively and easy to read with many illustrations. Metric units are used throughout. Statistics is now a topic in many CSE examinations and every effort has been made to cover the different CSE syllabuses with Starting Statistics. So write now for an inspection copy of Starting Statistics to the address below.

Home Mathematics 70p

A B Tookey

Home Mathematics concentrates on the mathematical aspects of every day life. Many CSE examining boards are now offering a syllabus which is devoted to this particular topic and Home Mathematics has been written specifically to meet this need. The book has also enjoyed considerable success with non-examination and commercial students. So write now for an inspection copy of Home Mathematics to the address below.

See these and many more Mathematics books in our 1974 Catalogue or order inspection copies by writing to Christine Walsh, W213Q, Longman Group Limited, Longman House, Burnt Mill, Harlow, Essex CM20 2JE.

BELL

New books

An Introduction to Algol

F. R. WATSON

A brief introduction to the basic ideas of computer programming through the medium of flow charts and the computer language Algol.

£2.50

Multiple Integrals

G. COHEN

A new explanatory and illustrative approach with the level of rigour maintained being sufficient for most pass degree students and those studying for higher diplomas.

£2.30

Computer Programming in the Classroom

B. J. JACKSON

The volume uses the City and Guilds Mnemonic Code which is widely used in secondary schools and colleges for introductory work. Each chapter contains numerous exercises for the student and the book is illustrated throughout with Flow Charts and Programs.

£1.30

Advanced Level Mechanics

A. J. FRANCIS

Written to cover the Mechanics required for Advanced level Mathematics this book is fully metricated and vector methods are used quite extensively. In practice it has been found that the use of vector methods from the very beginning in no way makes the subject more difficult to teach but avoids much unnecessary duplication and gives a much clearer and more unified structure to the subject.

£2.95

Mechanics

P. GANT

Liberally illustrated with numerous examples and exercises the book is intended to provide a first course in Mechanics as well as being suitable for those studying the subject at Additional Mathematics or at Lower Sixth form level.

£1.30

Elementary Mechanics

D. A. QUADLING and A. R. D. RAMSAY

2nd Edition

This very successful book has gained a reputation as a first-class text-book of mechanics. The need to introduce SI units has also provided the opportunity for the authors to revise the material in the light of recent changes of thought as to the importance of various topics including greater use of vector methods.

Volume 1 **£1.50** Volume 2 **£1.90**

Theory and Applications of Numerical Analysis

G. M. Phillips

*Department of Applied Mathematics
University of St. Andrews, Scotland*

and P. J. Taylor

*Department of Computing Science
University of Stirling, Scotland*

1973, x+380pp., soft cover £3.90 hard cover £5.80

0.12.553550.3

'What is numerical analysis?' asks the first section of this book. Dr. Phillips and Dr. Taylor answer by supplying a logical self-contained development of this lively and important branch of mathematics. The intention of this volume is to foster in the student both a grasp of the theoretical principles of the subject and a sound practical approach to the solution of problems by numerical methods.

The reader should gain a full understanding of the mathematics and methods for the approximation of functions and data, numerical integration, the solution of linear and non-linear algebraic equations and the solution of ordinary differential equations. The text includes its own introductory material on the basic analysis and linear algebra required. A very large number of worked examples—both theoretical and practical—and problems (many with solutions) are provided which will enhance this textbook's great value to students of mathematics, computer science and engineering.

Contents

Introduction. Basic analysis. Taylor's polynomial and series. The interpolating polynomial. 'Best' approximation. Numerical differentiation and integration. Solution of algebraic equations of one variable. Linear equations. Matrix norms and applications. Systems of non-linear equations. Ordinary differential equations. Boundary value and other methods for ordinary differential equations. References. Solutions to selected problems. Appendix: Computer arithmetic. Index.

UNIVERSITY OF KEELE, STAFFORDSHIRE

ONE YEAR FULL-TIME COURSES

Applications are invited from qualified school teachers and lecturers in Colleges of Education or of Further Education for the following courses which commence in October 1975.

Master's Degree Course in Mathematical Education

The course leading to the degree of M.Sc. (Education) is open to good honours graduates. It is offered in conjunction with the Department of Mathematics and parallels similar courses available for teachers of science. Specialist courses in mathematics will complement the course components in mathematical education in which original individual work will also be required.

Diploma of Advanced Study in Education—Secondary Mathematics

The Advanced Diploma course is intended to deepen mathematical education in the context of the curriculum as a whole. Written studies arising from practical and experimental work will form part of the assessment of this course which will also include a major study on a topic of the student's choice.

Application Forms and Further Particulars obtained from:

M.Sc. (Education) — **The Registrar**

Diploma — **The Secretary,**

The Institute of Education,

University of Keele, Keele, Staffordshire ST5 5BG

Introductory Vector Analysis

C D COLLINSON

The aim of this book is to present a basic course in vector analysis, suitable for applied mathematics, science and engineering students. The interests of the applied mathematician and the scientists lead them to require mathematical techniques before they possess the mathematical maturity to understand the rigorous treatment of these techniques. For this reason it has been necessary to include chapters on the calculus of functions of several variables and on integration theory; topics which many readers will study rigorously later. The index notation is used throughout in order to clarify the component formulation of vectors and to simplify the proofs of several vector identities.

Probable publication November

Cloth £5.50 net Paper £2.50 net

Interactive Computing with BASIC

D MONRO

A matter-of-fact introduction to computing with BASIC. The author presents the computer as an extension of the slide rule, avoids glamourising the subject and rapidly has the student operating his own programs. The book can be used with terminals on-line to larger computers or with smaller self-contained machines.

Probable publication October

£1.50 net approx

Numerical Analysis—the Mathematics of Computing Volumes 1 and 2

W A WATSON T PHILIPSON and P J OATES

The volumes attempt to provide an elementary and sound introduction to some of the most important methods of obtaining numerical solutions of known accuracy to a wide variety of problems. Both volumes may be used for G.C.E. A-level courses, O.N.C. and Diploma, H.N.C. and Diploma and some University courses.

Volume 1 £1.50 net Volume 2 £1.60 net

Statistics and Experimental Design

GEOFFREY M CLARKE

'This book is largely intended for undergraduate students of biology as basic guidance in the applications of elementary statistics to practical problems in their subject. . . clear explanations of the practical meaning of any statistical procedure discussed and worked examples are used to illustrate not merely the use of the procedure but also its appropriateness and limitations in different situations . . . may be strongly recommended to non-mathematical students requiring a common sense grounding in statistical methods.' *Nature*

Cloth £2.40 net Paper £1.35 net

Modern Mechanics—a vectorial approach

CHRISTOPHER A L WRAGG

Older textbooks often go into far greater depth than is required by the Advanced Level G.C.E. courses. In the belief that this can be off-putting to the average sixth former, this book has been strictly confined to A-level topics. It is however suitable for all the G.C.E. Examination Boards and will provide a thoroughly new approach to the teaching of applied mathematics.

THE MATHEMATICAL ASSOCIATION

The fundamental aim of the Mathematical Association is to promote good methods of mathematical teaching. Each member receives four issues of the *Mathematical Gazette* and/or six issues of *Mathematics in School* (according to the class of membership chosen), together with any Newsletters and Reports published during the year. Intending members should ask the Executive Secretary for information and application forms.

The address of the Association and of the Honorary Treasurer and Secretaries is **150 Friar Street, Reading RG1 1HE. Telephone Reading 581 389.**

Change of address should be notified to the Membership Secretary at the Reading office. If copies of the Association's periodicals fail to reach a member for lack of such notification, duplicate copies can be supplied only at the published price. If change of address is the result of a change of appointment, the Membership Secretary will be glad to be informed.

Subscriptions should be paid to the Hon. Treasurer.

The Library is housed in the University Library, Leicester.

Correspondence for the **Problem Bureau** should be addressed to Mr. R. H. Cobb, **9 The Lees, Malvern, Worcs. WR14 3HT.**

THE MATHEMATICAL GAZETTE

Editor:

Mr. D. A. Quadling, 12 Archway Court, Barton Road, Cambridge CB3 9LW.

Assistant Editors:

Dr. J. A. Anderson, Department of Mathematics, The University, Nottingham NG7 2RD.

Dr. J. Howlett, Atlas Computer Laboratory, Chilton, Berks.

Mr. J. W. Hersee, 76 Pembroke Road, Bristol BS8 3EG.

Material for publication, and books for review, should be sent to Mr. Quadling. Authors will be notified as soon as possible whether or not their contributions can be accepted; if an *immediate* acknowledgment is required, they should send an addressed, reply-paid postcard with their contribution.

Each assistant editor will be concerned with a particular aspect of the contents of the *Gazette*: Dr. Howlett with applied mathematics, Dr. Anderson with pure mathematics and Mr. Hersee with mathematics at school level.

Business and advertising correspondence should be addressed to the Executive Secretary at the Reading office of the Association.
