Cover: U.S. Industry a Century Ago

Fueled by expanding markets and by technological and organizational innovation, many sectors of U.S. industry enjoyed enormous growth during the late nineteenth century. In the late twentieth century, competition was much more rigorous. New global competitors and new constraints allowed small room for error, particularly for companies in sectors like heavy machinery, which had high capital costs but comparatively stable technology. In a scenario that threatened to become all too familiar, Allis-Chalmers, the company whose forerunner had proudly displayed the 3,000-horsepower engine pictured on our cover at the 1893 World Columbian Exposition in Chicago, filed for Chapter 11 protection in 1987.

This edition of the Business History Review is a special issue on “Competitiveness and Capital Investment: The Restructuring of U.S. Industry, 1960–1990.” It is devoted to an analysis of U.S. industrial competitiveness over the last three decades, examining areas of decline, stability, and continuing leadership in their historical, economic, and managerial contexts.

CONTRIBUTORS

Carliss Y. Baldwin is William L. White Professor of Business Administration and teaches in the Finance area at the Harvard University Graduate School of Business Administration. She received a bachelor’s degree from Massachusetts Institute of Technology, MBA and DBA degrees from Harvard University, and was an assistant professor at MIT’s Sloan School of Management from 1977 to 1981. With Kim Clark she is studying knowledge acquisition and financing in the high-technology computer workstation industry. Recent papers include “How Capital Budgeting Deters Innovation—And What to Do About It” (1991), and (with Kim Clark) “Modularity-in-Design: An Analysis Based on the Theory of Real Options” (1994). Other recent projects have included a study of the impact of lower transaction costs on government deposit insurance.

Alfred D. Chandler, Jr., is Isidor Straus Professor of Business History emeritus at the Harvard University Graduate School of Business Administration. He is the author of many articles and of several books, including Strategy and Structure: Chapters in the History of the American Industrial Enterprise (1962), The Visible Hand: The Managerial Revolution in American Business (1977), for which he won the Pulitzer Prize in History, and Scale and Scope: The Dynamics of American Capitalism (1990). Most recently he has published “Organizational Capabilities and the Economic History of the Industrial Enterprise,” Journal of Economic Perspectives 6 (1992), and “Corporate Strategy, Structure and Control Methods in the United States during the 20th Century,” Industrial and Corporate Change 1 (1992). At present, he is working on a history of the changing portfolios of American industrial firms since the Second World War, a larger study of which the article published here is a part.

Kim B. Clark is Harry E. Figgie, Jr., Professor of Business Administration at the Graduate School of Business Administration of Harvard University, where he chairs the Technology and Operations Management area. He received his Ph.D. in economics from Harvard University in 1978. He is the author or co-author of many articles on technology, product development, and management,
particularly in the automobile industry. He has also written and edited a number of books in these fields, the most recent of which are (with Takahira Fujimoto) Product Development Performance: Strategy, Organization, and Management in the World Auto Industry (1991) and, both with Steven C. Wheelwright, Revolutionizing Product Development: Quantum Leaps in Speed, Efficiency, and Quality (1992) and Leading Product Development (forthcoming).

Bronwyn H. Hall is associate professor of economics at the University of California at Berkeley, as well as founder and president of TSP International, a fifteen-year-old econometrics software firm. She received her doctorate in economics from Stanford University in 1988 and has published numerous articles on the economics of R&D and technological change. Her current research focuses on the effectiveness of government tax policy on R&D spending, international comparative studies of the contribution of industrial R&D to growth, and the use of patent measures to value the output of innovative activity.
