problems that would arise in waste disposal. Plant geneticists who developed corn varieties based on a single type of cytoplasm unknowingly put whole farm operations at risk in the Midwest when corn blight appeared. By creating multidisciplinary research teams that together search for answers, we can tap the synergy of shared knowledge that will propel us forward into a successful future in agriculture.

Acknowledgments. I appreciate support provided for the symposium by the National Environmentally Sound Production Agriculture Laboratory, The University of Georgia, Coastal Plain Experiment Station, Tifton, Georgia. My deepest gratitude is extended to the symposium participants who generously shared their time and comments both during the symposium and on the draft of this synopsis.

Appendix: Symposium Participants

Dr. James M. Davidson
Vice President, Agriculture and Natural Resources
Institute of Food and Agricultural Sciences
University of Florida
Gainesville, FL 32611

Dr. Alice J. Jones
Dept. of Agronomy
256 Keim Hall
University of Nebraska
Lincoln, NE 68583-0915
(At the time of the symposium, Dr. Jones
was Interim Director of USDA's Sustainable Agriculture Research and Education
Program.)

Dr. Craig S. Kvien Crop Physiologist and NESPAL Coordinator The University of Georgia Coastal Plain Experiment Station P.O. Box 748 Tifton, GA 31793

Dr. Harry P. Mapp Dept. of Agricultural Economics 308 Agricultural Hall Oklahoma State University Stillwater, OK 74078-0505

Dr. James V. Worstell
Coordinator, "State of the South" and
agricultural producer
148 Lost Fork Road
Richmond, KY 40475

INSTITUTE NEWS (Continued)

Wallace Institute Board Approves New Programs, Elects New Members

The Wallace Institute's Board, at its midyear meeting in Carrington, N.D., approved two new programs and elected three new members who will start their terms in March, 1996. The board approved the Ward Sinclair Memorial Internship Program, established to honor the late Ward Sinclair, an organic farmer and Wallace Institute Board member.

The board also approved the Henry A. Wallace Annual Lecture on Science, Technology, and Public Policy, which will be launched on March 14, 1996. The annual lecture, to be given by a distinguished leader in agricultural science or policy, will honor the late Henry A. Wallace, a former Vice President of the United States and Secretary of Agriculture whose goal was to establish a viable farm economy and, at the same time, conserve the nation's natural resources. The lecture series will also draw attention to the challenges of U.S. agriculture and reach a broad audience with informa-

tion about the importance of agriculture to this country.

The three new members elected to the Wallace Institute Board are:

Dr. Jill Shore Auburn, Associate Director, Sustainable Agriculture Research and Education Program, University of California, Davis; Regional Training Coordinator, Western Region USDA-SARE Program; and Chair, Information Directorate, World Sustainable Agriculture Association.

Christine (Cass) A. Peterson, farmer and owner of the Flickerville Mountain Farm and Groundhog Ranch in Dott, Pennsylvania; member, Board of Directors, Pennsylvania Association for Sustainable Agriculture; and member, Governor's Agricultural Advisory Committee to the Pennsylvania Department of Environmental Resources.

Thomas N. Urban, Senior Lecturer, Graduate School of Business Administration, Harvard University, and Chairman of the Board of Pioneer Hi-Bred International, Inc., where he was Chairman, President, and CEO from 1984 until summer, 1995; former member, President's Council
— National Academy of Sciences; and former Mayor of the City of Des Moines, Iowa.

Applications For Ward Sinclair Internship Due March 1

Applications for the Ward Sinclair Memorial Internship Program, which will begin in 1996, are due on March 1, 1996. To honor the late Ward Sinclair — an organic farmer, a writer, and a member of the Wallace Institute's Board of Directors — the Wallace Institute will award one internship each year to a person desiring the "hands-on" experience of working on a farm that produces and direct-markets food, and with a public agency having responsibilities related to direct marketing. The internship will be for three to six months, from late spring to early winter.

Interns will spend approximately half their time working at the Flickerville Mountain Farm and Ground Hog Ranch in Dott, Pennsylvania, the farm established and managed by the late Ward Sinclair and Cass Peterson.
