Nutritional and surveillance
Prevalence and risk factors of vitamin D deficiency and deficiency among 6-24 month-old underweight and normal-weight children living in an urban area of Bangladesh. AM Shamin, ABD, MMH, MRD. 2018

Vitamin D status among indigenous Mayan (Kekchi and Afro-Caribe) and Garifuna adolescents from Guatemala: A comparative description between two ethnic groups residing on the Rio Dulce at the Caribbean coast in Izabal Province, Guatemala. A Bayezid, HJ Van Der Wolf, MB-Wolde, E Capugno, J Amos, and QI Bermudez. 2018

Declines in traditional marine food intake and vitamin D intakes from the 1980s to present in young Alaska Native women OJ White, KC Thumers, LR Richard, J Wang, J. Borison, V. Ahloe, SE Hopkins, BW Byler, TM Norrissey and S. Dubick. 2018

Vitamin D deficiency prevalence and risk factors among pregnant Chinese women C Xu, Y Chen, H Mu, and M Wang. 2018

Sun exposure, UV irradiance and serum 25-hydroxycholecalciferol in pregnant women in rural India. S Nathwani, AM Vyas, M Sahni, V Ranawat and V Bal. 2018

Nutritional communication
Comparing measured calcium and vitamin D intake with perceptions of intake in Canadian young adults: Insights for designing effective communication. A Holland and T Willett. 2018

Enthusiastic nutrition
Determine of vitamin D supplement use in Canadians. D McCartney, X Mei and Y Chen. 2018

Nutritional epidemiology
25-hydroxyvitamin D concentration and all-cause mortality: The NHANES Collaboration Cohort Study. AH Mitchell, DR McGinnis, R Haskell, AR Freeze, RW Foley, CR Buie, MG O’Leary, WJ Eyler, and DW English. 2018

The associations of vitamin D status and dietary calcium with the metabolic syndrome: an analysis of the Victorian Health Monitor survey. PM Puna, Y Zhao, MG Shaw, LS Peters and Z Atia. 2018

Vitamin D deficiency is common and is associated with overweight in Mexican children aged 1-11 years. A Martinez, M Perez, M Mikel, L Lander, T Marrero, MB Meneses, M Castaneda and S. Whitworth. 2018

Vitamin D status in mothers with gestational diabetes mellitus and their infants: a case–control study from Latin America. A Contreras and S Villalpando. 2018

Vitamin D deficiency and its associated risk factors in children and adolescents in southern Iran. F Del, M Sadeghian, E Ghorbanpour, SR Dalleh and B Baharvand. 2018

Weight and skin colour as predictors of vitamin D status: results of an epidemiological investigation using nationally representative data. S Raja, J Visscher and B Hof. 2018

Prenatal vitamin D supplementation and infant vitamin D status in Bangladesh. A Jannat, A Mostov, M Roque and AR Rath. 2018

Economics and environment
Economic evaluation of vitamin D and calcium food fortification for fracture prevention in Germany. A Stelzmann, M Heinig, F Brauner, A-M König and F Blesch. 2018

Letter to the Editor
Maternal gestational vitamin D supplementation and child health: looking to the future. AF Placencia-Santos and AM Ulloa. 2018

Public Health Nutrition

Volume 20, 2017  ISSN: 1368–9800
Eighteen issues per year

Aims and Scope

Public Health Nutrition provides an international forum for the publication of original research and scholarship in the form of peer-reviewed original papers and reviews, and for discussion in the form of editorial, correspondence, and correspondence with authors.

The scope of Public Health Nutrition encompasses nutrition research, nutrition policy, nutrition practice, dietetic practice, food science, food quality, food safety, and food security. The journal aims to provide an international forum for the presentation of original research findings and high quality reviews of key topics, and for discussion of and debate on current issues and controversies. The journal also publishes special issues on major topics of international interest. The journal is open to submissions from all countries and all disciplines of nutrition research, including nutrition, health, and dietary and nutritional factors as determinants of health outcomes.

Notes for Authors

Public Health Nutrition (PHN) provides a forum for the presentation of original research findings and high quality reviews of key topics, and for discussion of and debate on current issues and controversies. The journal also publishes special issues on major topics of international interest. The field includes research, scholarship, and analysis of public health nutrition, that take a population, health promoting and preventive approach. Papers that do not have this emphasis provides a forum for the presentation of original research findings and high quality reviews of key topics, and for discussion of and debate on current issues and controversies.

Content:

Original research findings and scientific reviews are published in full papers usually less than 5000 words, not including the abstract, references, tables, figures and acknowledgements. Editorial comments express the opinion of the journal, as represented by its editorial team, on topics judged by them to be important. Editorials, including guest editorials, are usually co-authored and developed by the editorial team.

Position papers, including declarations and other statements of policy, may be invited or submitted.

Invited commentaries and book reviews are expressions of opinion on a topical subject. These are commissioned by the editor and should be submitted for comment and, when possible, published together with the author's reply.

Submission: PHN operates an online submission and reviewing system. All manuscripts should be submitted to http://mc.manuscriptcentral.com/phnutr. Please contact the Editorial Office on phn.editor@cambridge.org regarding any other types of submission.

Refereeing: Review articles and articles reporting original research are subject to external review by two or more referees who evaluate manuscripts based on their importance, relevance, and originality. Authors are asked to submit names and contact details (including email address) of up to four potential referees. All other contributions (editorial, position papers, invited commentaries, book reviews, and letters to the Editor) undergo an internal review process by at least two members of the editorial team. Invited commentaries and book reviews should be checked externally as necessary to avoid technical errors and to improve salience.

Copyright: At the time of acceptance, authors will be asked to provide an electronic copy of the 'License to Publish' (in lieu of copyright transfer), available at https://www.nutritionsociety.org. It is the author's responsibility to obtain written permission to reproduce any material (including text and figures) that has appeared in another publication.

Preparation of manuscripts: Please refer to the full Directions to Contributors on our website (http://www.nutritionsociety.org). Manuscripts should be written in English, and spelling should follow the Oxford English Dictionary. For authors whose native tongue is not English, in-house editorial attention to their contributions will improve clarity. On acceptance, all contributions are subject to editorial amendment to conform to house style. None of the material should be prepared in a common word processing package (Word for Windows is preferred) in Times New Roman or other common typeface, prepared with doublespaced text, at least 2 cm margins, and page and line numbers. Standard abbreviations and SI units must be used.

Disclosure of financial support and any competing interests. The submission must include a statement within an Acknowledgements section reporting all sources of funding, and the nature of the contribution of each author to the manuscript. If there are no competing interests, this must be stated. Authors are asked to provide this information during the submission process and should not include it as part of the manuscript to allow for double-blind reviewing.

Arrangement of papers:

1. Title page should include the article title, author(s), affiliation(s), up to eight keywords, one author identified for correspondence (with full postal address, telephone and fax numbers, and email address), and a running title of up to 45 characters. The title page should be submitted as a separate cover letter. The rest of the manuscript, to enable double-blind reviewing.

2. Abstract should be structured, usually using the following internal headings: Objective, Design, Setting, Subjects, Results, Conclusions. Abstracts should be intelligible without reference to text or figures and should not exceed 250 words.

3. Test should be divided under headings (typically to include Introduction, Methods, Results, Discussion and Conclusions), and sub-headings as appropriate. Conclusions should include recommendations that derive from the research, that are concrete, feasible, and potentially effective. Emphasising that more research is needed is usually not necessary unless there is specific reference to a gap. All submissions must include a statement that the research was conducted in accordance with guidelines laid down by the Helsinki declaration and approved by an ethics review committee.

4. Acknowledgements (sources of funding, competing interests) author's contributions should be clearly stated. Acknowledgements should be provided in the submission process, not as part of the manuscript.

5. References should be in Vancouver style. Please refer to the full Directions to Contributors.

6. Tables should be reduced to the simplest form and should not be used where text or figures give the same information. Each table must be accompanied by a clear and concise caption that is comprehensible without reference to the text. Legends should be provided.

7. Figures should be specified, and legends should be provided. Each figure, with its legend, should be comprehensible without reference to the text and include definitions of abbreviations used in the text and legend.

Proofs: Corrections and proofs for correction will be emailed to the first named author unless otherwise indicated. The author will receive a PDF for proof copy. It is important that proofs be returned promptly. Author must be charged for any alterations in excess of 10% of original setup.

Obligations: The corresponding author will receive a PDF of the proof free of error. Once the proofs have been corrected and approved, there will be no further alterations to the proofs. Authors are available to purchase and must be ordered before publication.
