Early Vital Sign Thresholds Associated with 24-Hour Mortality among Trauma Patients: A Trauma Quality Improvement Program (TQIP) Study – CORRIGENDUM

Michael D. April, MD, DPhil, MSc; Andrew D. Fisher, MD, MPAS; Julie A. Rizzo, MD; Franklin L. Wright, MD; Julie M. Winkle, MD; Steven G. Schauer, DO, MS

DOI: 10.1017/S1049023X24000207, published by Cambridge University Press, 2 April 2024.

The authors regret that the wrong respiratory rate was listed in the abstract of the article when initially published. Instead, this should have been “The optimal thresholds for ED systolic was 121, pulse rate was 95, SI was 0.8, and respiratory rate was 21.”

The article has been updated to reflect this change.
