

SYSTEMS OF WEED CONTROL IN WHEAT IN NORTH AMERICA

The WSSA announces publication of the most comprehensive monograph ever published on wheat production practices and methods of managing weeds in wheat in the United States. **SYSTEMS OF WEED CONTROL IN WHEAT IN NORTH AMERICA** contains 22 chapters that total 487 pages and was prepared by 26 weed scientists who have specialized in weed management in cereals. The monograph documents spring and winter wheat production practices in different regions of North America, weed problems, and methods of managing weeds using herbicides and cultural practices.

The monograph is divided into three parts. In the first part, the distribution of weeds of wheat in North America and yield loss assessment are summarized. In the second part, wheat production practices and weed control systems are reviewed for the following regions of North America: the Canadian Prairie Provinces, the Northern, Central, and Southern Great Plains, the Northeast, the Southeast, the Pacific Northwest, and California and Arizona. Finally, the use of the following herbicides in wheat is reviewed: barban, bromoxynil, clopyralid, diclofop, difenzoquat, flamprop, picloram, propanil, substituted triazines, triazinones, and urea herbicides, sulfonyleurea herbicides, triallate, and trifluralin. Each chapter on wheat herbicides summarizes knowledge of weed control, application methods, spray additives, crop response, environmental effects on weed control, combination treatments, and environmental fate.

This monograph summarizes weed control methods and research in wheat for the first time. Research conducted over the last 42 years is emphasized (1945 to 1989). The monograph should be useful to weed scientists, extension agents, other agriculturalists, crop consultants, farmers, and herbicide manufacturers, distributors, and sales personnel who are concerned with production of wheat.
