SUBSCRIPTIONS may be sent to any bookseller or subscription agent or direct to Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA and Canada should be sent to Cambridge University Press, 32 East 57th Street, New York, NY 10022. All orders must be accompanied by payment. The subscription price of volume 94, 1987, is £68.00 net (including postage) for a volume of three parts plus a supplement (US $160.00 in the USA and Canada) and for volume 95, 1987, £51.00 net (including postage) for a volume of three parts (US $120.00 in the USA and Canada) payable in advance (£118.00 or US $275.00 per year), separate parts cost £18.00 net or US $43.00 each (plus postage). Second class postage paid at New York, NY and at additional mailing offices. POSTMASTER: send address changes in USA and Canada to Cambridge University Press, 32 East 57th Street, New York, NY 10022. ISSN 0031-1820.

## CONTENTS

### Preface

Preface

### List of contributions

List of contributions

### Opening remarks

Opening remarks

### Inflammatory responses to parasites

Inflammatory responses to parasites

#### Introduction

Introduction

#### Inflammation

Inflammation

##### Basic pathogenic mechanisms

Basic pathogenic mechanisms

##### Cellular events

Cellular events

- Acute phases of inflammation
- Vascular changes
- Granulocytes
- Cells associated with chronic inflammation

##### New technology

New technology

#### Conclusion

Conclusion

#### References

References

### Pathophysiology of parasitic infections

Pathophysiology of parasitic infections

#### Summary

Summary

#### Introduction

Introduction

##### Haematological changes

Haematological changes

- **(1) Destruction of red cells**
  - Direct damage to red cells
  - Haemolysins
  - Immune mechanisms
  - Splenomegaly
- **(2) Haemodilution**
- **(3) Abnormal haemostasis**
- **(4) Red cell production**

##### Extravascular disturbances associated with haemoprotozoan infections

Extravascular disturbances associated with haemoprotozoan infections

- **Cardiological**
- **Nervous system**
- **Immune system**
- **Urinary system**
- **Damage to other body systems induced by parasites**

#### Gastrointestinal parasites

Gastrointestinal parasites

- Feed intake
- Gastrointestinal motility, digestion and absorption
- Protein metabolism
- Energy metabolism
- Factors modulating pathophysiological responses

#### References

Pathophysiology of severe falciparum malaria in man
  Introduction
    Relevance of animal models
    Host factors predisposing to severe falciparum malaria
    Parasite virulence
  Pathophysiology of organ dysfunction in human severe falciparum malaria
    Cerebral malaria
      Mechanical hypotheses
      Agglutination and ‘sludging’ of erythrocytes
      Decreased erythrocyte deformability
      Disseminated intravascular coagulation
      Vascular endothelial damage
      Cytoadherence
      Physiological consequences of cytoadherence
      The permeability hypothesis
      Immunological mechanisms
      Circulating toxic compounds
      Pathophysiology of cerebral malaria: conclusions
    Therapeutic implications of cytoadherence
    Importance of cytoadherence and sequestration of parasitized erythrocytes in organs and tissues other than the brain
  Pathophysiology of malarial renal failure
    Blackwater fever
    Circulatory abnormalities
    Malarial pulmonary oedema
    Anaemia
    Hypoglycaemia
    Pathophysiology of hepatic and gastrointestinal disturbances
    Pregnancy
    Conclusions
    References

Gastrointestinal mucus, a medium for survival and for elimination of parasitic nematodes and protozoa
  Introduction
  Composition of mucus
  Parasites and mucus in the normal host
  Mucus, antibody, and resistance to parasites
  Mucus and rapid expulsion of intestinal parasites
  Goblet cells and mucus during parasitic infection
  Synthesis and function of mucus during primary infection
  Mucosal immune responses, their effect on the mucus barrier
    Immediate hypersensitivity reactions
    Duration of resistance
    The size of challenge dose
  Inflammatory mediators and mucin secretion
  Experimental manipulation of the mucus barrier
  Evasion of the mucus barrier by parasites
  Conclusions
  References
