

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

A simple proof of an expansion of an eta-quotient as a Lambert series	
Shaun Cooper	353
On the dynamics of the linear action of $SL(n, \mathbb{Z})$	
Grant Cairns and Anthony Nielsen	359
Minimax inequalities in G-convex spaces	
Mircea Balaj	367
Existence and multiplicity results for quasilinear elliptic equations	
Wei Dong	377
Uniformly perfect Julia sets of meromorphic functions	
Sheng Wang and Liang-Wen Liao	387
The dynamics of an Action of $Sp(2n, \mathbb{Z})$	
Anthony Nielsen	399
On the nonlinearity of the sequence of signs of Kloosterman sums	
Igor E. Shparlinski	405
Chaos on function spaces	
Richard M. Aron, Juan B. Seoane-Sepúlveda and Andreas Weber	411
Searching for simultaneous arithmetic progressions on elliptic curves	
Irene García-Selfa and José M. Tornero	417
Farthest points and the farthest distance map	
Pradipta Bandyopadhyay and S. Dutta	425
On a system of nonlinear partial differential equations	
A Sanih Bonfoh	435
Multiple Hilbert and Hardy-Hilbert inequalities with non-conjugate parameters	
Ilko Brnetić, Mario Krnić and Josip Pečarić	447
On the cohomology of extensions by a Heisenberg Lie algebra	
Hannes Pouseele	459
Carter subgroups in the group of units of an associative algebra	
Thorsten Bauer and Salvatore Siciliano	471
On additive properties of general sequences	
Min Tang and Yong-Gao Chen	479
On finite loops whose inner mapping groups are Abelian II	
Markku Niemenmaa	487
Permutation representations and rational irreducibility	
John D. Dixon	493
The group of Poisson automorphisms of the Poisson symplectic space	
Sei-Qwon Oh and Eun-Hee Cho	505
Generating functions related to the Okamoto polynomials for the Painlevé equation	
Hirofumi Goto and Kenji Kajiwara	517

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Some analytical solutions for problems involving highly frictional granular materials	
Ngamta Thamwattana	527
