

Complete Culture Media

IN TWO ENTIRELY NEW FORMS*

*** TABLETS**

— for preparation of single tubes and small quantities of media. Each tablet when dissolved in water produces a convenient quantity.

*** GRANULES**

— for larger scale preparations. Hard and of even size, the granules are less hygroscopic and easier to handle than spray-dried powder.

Both tablets and granules retain all the properties of the original medium, from which they are indistinguishable when reconstituted.

ADVANTAGES ARE APPARENT—

Big time-saving in preparation • No specialised equipment needed
Variability reduced to minimum • Easily portable for field work
Results reproducible from one laboratory to another when using media from central source • Economical, as only sufficient for immediate requirements need be used.

THE FOLLOWING ARE AMONG THE MEDIA AVAILABLE AS TABLETS AND GRANULES

Nutrient Broth • Nutrient Agar • McConkey Broth
McConkey Agar • Peptone Water • Glucose Peptone Broth
Glucose Peptone Agar • Agar-Agar
