“All researchers working in the tropics or who attempt to follow tropical literature will find it essential reading.”

GH Orians, *Nature*

**Journal of Tropical Ecology**

Editor: David M. Newbery, *University of Stirling*

*Journal of Tropical Ecology*, first published in 1985, has now become a major international ecological journal. Attractively printed with excellent quality illustrations and tables, it examines the special problems of tropical environments and their proper management. The breadth and quality of papers, the format and price, are also aimed to stimulate the research activities of young ecologists in tropical nations.

Published quarterly by Cambridge University Press, the journal is for all those interested in the biology of the tropics – agriculturalists, foresters, developmental planners, conservationists, and wildlife biologists.

**Subscription Information**

*Journal of Tropical Ecology* is published quarterly in February, May, August and November. Volume 11 in 1995: £96 for institutions; £40 for individuals; £25 for individuals from less developed countries (except Mexico); delivery by airmail £18 per year extra. ISSN 0266-4674.

Experimental Agriculture

Experimental Agriculture publishes the results of analytical research into the agronomy of crops, particularly the food, forage and industrial crops of the warmer regions of the earth. International in scope, it is especially concerned with experimental work conducted in the field and is designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new methods of agricultural crop production and discussions of problems arising from the rapid expansion of agricultural production. Particular emphasis is placed on papers covering farming systems and sustainability in tropical regions. There are also regular book reviews.
