Aims and Scope: The International Journal of Technology Assessment in Health Care has as its specific scope of interest the generation, evaluation, diffusion, and use of health care technology. It addresses the diverse audience of health care providers within medicine, public health, nursing, and the allied health professions; decision makers in government, industry, and health care organizations; and the scholarly disciplines such as ethics, economics, law, history, sociology, psychology, and engineering. The journal aims to fill the needs of those interested in the complexities of interaction between people and technology, technology as a force in social and organizational change, and technology as it is created, produced, applied, and paid for. It examines descriptively and analytically the effects of technology as perceived from the vantage point of different academic disciplines and policy-making organizations and examines methods necessary to conduct studies and evaluations of technology.

The focus of the journal is the international health care community. The experience of different countries in their encounter with health care technology, viewed comparatively, is available to understanding its effects. Further, it is important to establish ties under the vantage point of different academic disciplines and policy-making organizations and examine methods necessary to conduct studies and evaluations of technology.

2019 Submission Information: Submission of manuscripts to the International Journal of Technology Assessment in Health Care (ISSN 0266-4625) is

Founding Editors: Egan Johnson and Stanley J. Reiser

The Journal welcomes submissions of articles that evaluate health technology to support health policy or practice decisions, or discuss methods of assessing such technologies; see Journal Aims and Scope for full details. Manuscripts are reviewed by the Editors and members of the Editorial Board. Those that pass proceed to an international review process, which usually is completed within 4 to 6 weeks. Accepted manuscripts will be published within 4 to 6 months. Articles must be in English. Spelling, punctuation, and jargon should conform to the 15th Edition of The Chicago Manual of Style (University of Chicago Press).

Abstract and Keywords: A 100- to 250-word abstract, submitted on a separate page, should appear immediately after the article’s major arguments and/or results, and its conclusions/recommendations. Authors must be submitted in four sections: (1) Objective(s); (2) Methods; (3) Results; and (4) Conclusions, except where the subject or format of the article does not permit. Three to five key words, using terms from the Medical Subject Headings from Index Medicus, should follow the abstract.

References and Notes: The references must be arranged according to the Index Medicus Uniform Requirements for Manuscripts (URM); numbered consecutively regardless of the appearance in the text, alphabetized by authors; and followed by the year(s) of publication. Each reference must include first names, initials, and full names of all authors. If authors are anonymous, the reference must include the title of the article and the name of the periodical from which it is taken. Journal abbreviations must follow the style of the Index Medicus. We recommend that authors use online databases for literature searches. If the previously published work does not appear in databases indexed by Index Medicus, the citation should be arranged so that the source is unambiguous. Each reference must include a page range, and the page range must begin with the first page of the article, not with the first page of the issue or volume of the periodical.

Permissions: Authors are responsible for obtaining written permission to publish material for which they do not own the copyright. Contributors will be asked to assign their copyrights to Cambridge University Press.

Open Access: Our standard copyright form allows Open Access Archiving (for instance posting the Accepted Manuscript in an Institutional Repository or on a personal webpage). Authors can also choose to publish Open Access (making articles freely available for non-commercial use) in a Large number of our Journals by using Cambridge Open Option. For complete details please refer to: http://journals.cambridge.org/OpenAccess

Copyrighting and Permissions: Publishers reserve the right to copyright and reproduce all accepted articles. Page proofs will be sent to the lead author for final review.

Instructions for Contributors

Cover Sheet and Cover Letter: A cover letter, signed by all authors, must attest that (1) each author contributed to the conception and design of the study and interpretation of the data and the writing of the paper; (2) each author has approved the version being submitted; and (3) the content has not been published nor is being considered for publication elsewhere.

As relevant to the content of the paper, the letter should also attest to the fact that any research with human or animal subjects conforms to the ethical and legal standards of the country in which it was performed. All authors must declare any financial arrangements with companies whose products are discussed in the paper or their competitors; such information will not be revealed to reviewers but may be included in a suitable format in the final publication if the manuscript is accepted.

The cover sheet should list (1) the article’s full title, and (2) a short title (50 characters or less) for the running head
(3) the name of the corresponding author and his/her
(4) complete mailing address,
(5) telephone number, and
(6) e-mail address.
