Hospital Infection Director—CDC

William J. Martone, MD, has been promoted from the position of Acting Director to Director, Hospital Infections Program of the Center for Infectious Diseases at the Centers for Disease Control in Atlanta.

Nosocomial Sessions at Upcoming ASM Meetings

Division L (Nosocomial Infections) of the American Society for Microbiology (ASM) has an active agenda planned for the annual ASM meeting, May 14-18, 1989, in

New Orleans. The outgoing Division L chairman, David Shlaes, MD, and the 1989 chairman, Glen Mayhall, MD, encourage their SHEA colleagues to attend this excellent and exciting meeting.

Division L will sponsor six seminars, two poster sessions, and one slide session. The seminars are: 1) *Clostridium difficile* Infections: New Lessons from Bacterial Typing Systems; 2) Computerized Information Systems and Hospital Epidemiology; 3) Current Concepts in Biosafety; 4) Rapidly Growing Non-Tuberculous Mycobacteria; 5) Surgical Wound Infection Update: Epidemiology, Pathogenesis, and Prevention; and 6) Antibiotic Resistance. There will be a slide presentation on "Molecular Markers for Hospital-Acquired Microorganisms," and poster sessions on "Hospital Outbreaks of Nosocomial Pathogens" and "Surveillance, Cost, and Prevention of Nosocomial Infections." The Division L speaker will be Richard Wenzel, MD, who will present "New Frontiers for

Hospital Epidemiology: Assuring Quality Care."

Division L currently has 450 members. A meeting for division members will be held in New Orleans on Wednesday, May 17, at noon. Please consult the ASM schedule for location.

Infection Control Meeting—China

The Chinese Association of Preventive Medicine will sponsor the founding meeting of its Society of Nosocomial Infection Control. This momentous event will be held in Changsha City, Hunan Province this summer.

The meeting will include scientific presentations and will be followed by a training course in nosocomial infection surveillance and control. More information may be obtained from Professor Wang Shuqun, Department of Epidemiology, 3 Yabao Road, Chaoyang District, Beijing, PR China.

Hi-TorPlus is used by more hospitals because nothing kills more germs.

For years, Hi-Tor Plus™ has been the number one quaternary germicidal cleaner/disinfectant because hospitals know it works. Now, Hi-Tor Plus' proven disinfectant range has been increased to include eight antibiotic-resistant strains, including MRSA. Hi-Tor Plus is proven to control 36 bacteria, viruses and fungi, including HIV 1 (AIDS virus). So hospitals can be assured of the widest possible range of control of any cleaner/disinfectant available.

Cleaning professionals know that killing germs is only half the battle. Just as critical is the product's ability to help control infection by cleaning away the grime that harbors pathogenic microbes. Hi-Tor Plus is a superlative cleaner, tested in harder water than found in hospitals (400 ppm, calculated as CaCO_3) as well as a 5% organic soil load to simulate the soil conditions found in most hospitals. So in your hard to clean or critical areas, your hospital can be assured that Hi-Tor Plus is both cleaning and disinfecting.

All this power at a use dilution of 1/2 ounce to the gallon makes it one of the most economical germicides you can use. And your staff will use Hi-Tor Plus correctly and safely,

with quality proportioning systems that work and full-disclosure labeled spray bottles (or labels for your bottles).

Your Huntington sales representative will make sure your people know how Hi-Tor Plus works best. And you get a full in-service program that includes videos, film strips and wall charts.

Behind Hi-Tor Plus, you'll find a one year guarantee and your Huntington representative. And one of our regional offices is just a free phone call away.

To learn more about Hi-Tor Plus, or to request a research bulletin and samples, call us today, toll-free:

Time
spent
in the O.R.
shouldn't be
hazardous
duty.

Your staff is exposed to infectious fluids and waste every day. It's part of the job.

That's why Baxter Operating Room Division offers a complete line of products and services designed to protect both staff and patient.

Products like our Medi-Vac® suction system. Our Jackson-Pratt® closed wound drainage system, and Pour-Safe™ exudate disposal bags. All are designed for safe collection, retention and disposal of infectious waste.

In addition, Convertors* poly-reinforced impervious gowns, and drapes with fluid collection pouches help protect staff and patient during fluid-intense procedures. Iso-Bac® absorbent reinforcement in our drapes prevents strike-through and reduces pathogenic growth.

For staff safety and reduction of disposal costs, we also supply training videos and seminars on segregation and minimization of infectious waste.

What we're doing to make the O.R. safe is considerable. But then, consider that the Operating Room Division is made up of three of the most well-known names in the business: Convertors/Custom Sterile, Pharmaseal® Surgical and V. Mueller.™ Together,

we're uniquely qualified to help you with any clinical or business issues you face.

To find out more about how we're taking the hazard out of hazardous duty, contact your local Baxter Operating Room Division sales representative, or write Baxter Healthcare Corporation, Operating Room Division, 1500 Waukegan Rd., McGaw Park, IL 60085.
