Neutron Stars and Pulsars: Challenges and Opportunities after 80 years Proceedings IAU Symposium No. 291, 2012 © International Astronomical Union 2013 J. van Leeuwen, ed. doi:10.1017/S1743921312023472

Neutron star seismology

Nils Andersson

University of Southampton, United Kingdom email: na@maths.soton.ac.uk

Abstract. I will provide an overview of recent improvements in our models for vibrating neutron stars, discussing the role of composition, heat, crust elasticity and superfluidity. I will explain how the results may impact on observations, in particular related to magnetar QPOs and future gravitational-wave searches.
