The Ultimate Solution for Efficiency
The All-New SU7000 Ultra-High Resolution Variable-Pressure Analytical Schottky FE-SEM

High-Resolution Imaging
• 0.9 nm resolution at 1 keV
• 0.8 nm resolution at 15 keV

Enhanced Versatility
• Large chamber handles samples 200 mm ø or 80 mm tall
• 18 accessory ports for analytical options

Fast Data Collection
• 200 nA beam current
• Synchronized working distance for imaging and analysis
• Fully integrated sample navigation camera
• Simultaneous 6-signal acquisition

All data collected simultaneously at 6 mm WD!

Innovation • Synergy • Solutions

Early Bird Savings Deadline: June 24
Machining sub-10 nm structures with high fidelity.

ZEISS ORION NanoFab

Your ion beam microscope for sub-10nm applications

Profit from the only system in the world that covers the complete range of micromachining to nanomachining applications using gallium, neon and helium ion beams in a single instrument.

**Extremely large cross-section:**
New iFIB+™ Xe plasma FIB with high currents up to 2 μA and unmatched FoV of 1 mm redefines conventional large-area cross-sectioning and dramatically decreases sample preparation time.

**Extended imaging capabilities:**
Next generation Triglav SEM column with improved and optimized in-beam detection system, and extending imaging capabilities, that now include energy-filtering BSE signal collection for ultimate surface sensitivity in sample characterization.

**Applications easier than ever:**
New TESCAN Essence™ software platform offers a simplified, user-friendly and customizable interface for effortless and maximum control in all applications, regardless the user skill level.
