are particularly important improvements considering the generally held view that South Asian people present with physical complaints. None the less, some respondents did complain of unequal and unfair treatment, of being made to feel inferior or intimidated, and feelings of frustration and helplessness. Visiting and engaging with clients in their own homes, engaging with their families, and being flexible about offering advice and practical support, were all valued. These devices were all used to engage the clients in treatment which later took on a more conventional form. Not all clients, however, wanted to be ethnically matched. A complaint often heard by health professionals is that Asian people 'don't get it' and want a different form of intervention, perhaps more concrete forms of advice and instrumental or practical help. This report illustrates how providing an innovative response to such requests can lead to effective use of counselling services, and that Asian people do 'get it' after all.

Clinical Guidelines in Old Age Psychiatry

First there was the publication of Assessment Scales in Old Age Psychiatry in 1999, providing a comprehensive collection of scales to measure the various manifestations of mental and physical diseases affecting older people. Now, the formidable duo Burns and Lawlor return, having teamed up with Tom Dening to produce another user-friendly companion. Clinical Guidelines in Old Age Psychiatry provides a source of direct and systematic advice to people working in, and responsible for, services for older people. It aims to improve the quality of patient care as well as achieving more standardised and consistent practice. Furthermore, it invites us to challenge and reflect upon our own clinical practice. It also serves, as before, to put old age psychiatry firmly on the agenda of those involved with commissioning, planning and financing services for older people.

It includes chapters on dementia, depression and other disorders and conditions such as delirium, schizophrenia, Parkinson's disease and learning disability. In addition, there are general statements varying from the National Service Framework for Older People to Home Alone.

Inevitably, many guidelines are consensus statements or practice policies, due to the lack of evidence from randomised controlled trials and other research studies. Most guidelines currently in use originate from professional bodies such as the various Royal Colleges and diverse national and international organisations.

The use of the single assessment process will certainly increase. Hopefully, public agencies and patient groups will have a greater involvement in the preparation of future editions of this book.

Considering the wealth of guidelines and statements on a multitude of aspects relating to older people's lives, the absence of any guidance on sexual health and relationships remains remarkable, particularly as the prevalence of sexual dysfunction is highest in this group. However, this is a minor criticism and no doubt the next edition will expand on this topic.

I highly recommend this book, not only to all aspiring and practising colleagues in the field, but to everyone aiming to improve both quantity and quality of services for older people in the broadest sense.

Therapeutic Communities for the Treatment of Drug Users

This multi-author review by British editors is divided into background, history and current situation, 'life-in', variations on the model and, finally, research and evaluation. Multi-authorship has led to overlaps. It was pleasing to see the early pioneers described as 'charismatic free-thinkers...imbued with ideological viewpoints and passion...experimenting'. Were there no evidence-based practice protocols?

Within a referenced history, there are ample quotes from residents outlining the changes leading to the 'new therapeutic communities'. Central throughout have been the Encounter Groups with the experience evolving; the move from behaviour modification to social learning, from confrontation to motivation. Also, there is the tension between professional input and the focus of the community being 'self-help' and 'here and now', plus the gradual erosion of insider/outside divisions, to becoming part of the wider community.

Authoritative, prescriptive and inflexible chapters are balanced by more personal portraits of therapeutic communities. Alan Woodham's closing personal view of working in a therapeutic community is not covered elsewhere, yet needs to be heard by those thinking of this field or funding these groups. As for residents' experiences, Keith Burnett provides a flowing association of thoughts with quotes from individuals. He addresses the problem of high drop-out rates, and offers solutions, not just leaving the responsibility on the ex-resident as being 'not motivated'.

Examples of how to, and how not to, set up a therapeutic community in prison, are given. Re-integration within the community has been neglected for too long and Paul Goodman and Karen Nolan give a frank view of resettlement.

The chapter by Barbara Rawlings on evaluation, essential in any review, is an overview of the evidence beyond 'improvements were greatest for those that stayed the longest'. Edle Ravndal gives details of one outcome study in Norway showing a methodology which others could well copy if they wish to remain financially sound.

This book is essential for those in this field.

Malcolm Bruce Consultant Psychiatrist in Addiction, Community Drug Problem Service, Edinburgh

The Human Rights Act and Mental Health

It seems fashionable these days to combine the written word with an audio-
visual presentation, particularly in the field of professional education and this offering is a fairly recent example. As a now retired, long-serving, lay member of the mental health review tribunal (MHRT), I was interested to see what this combined product had to offer. However, before doing so, a word or two concerning the context may be helpful. When the Human Rights Act came into force in October 2000, it was hailed by the Government as an important means of giving citizens the right to challenge the activities of the State through the courts. At the time of its inception, some mental health lawyers thought the impact of the Act would provide considerable opportunities for challenge (a view put forward in the video). A more balanced view indicated that if tribunals followed the ‘rules’ correctly, little litigation would be likely to ensue. This seems to have been the case, since (as far as I have been able to ascertain informally) only a few cases await judicial review and these seem mainly concerned with matters of interpretation, disclosure and delays. The booklet, of some 30 pages, to be read in conjunction with the video, deals with ‘The Law of European Convention’; ‘Possible Challenges’; ‘Possible Defences’; ‘Relevant Parts of the Human Rights Act’; ‘Schedule 1 of the Act’ and ‘Judgments of the European Court of Human Rights’. I found the section devoted to the Law of the European Convention the most interesting. The other sections will be of most interest (and comprehension) to lawyers! I viewed the video in the company of my daughter (who is a lawyer, but does not specialise in mental health law) and her partner, who is a retired educationalist. The copy we received was of poor sound quality (I tried it on two different video machines to make sure it was the video and not the equipment). The introductory musical ‘jingle’ was very off-putting. However, for the most part, the presentation by four professionals (three experienced lawyers and an advocacy manager) was competent enough and easy to ‘access’. However, the production’s biggest weakness was the fact that it was made prior to the actual implementation of the Act. It therefore really needs updating. Even allowing for the high cost of producing professional videos, it is very expensive. I do not imagine individuals will think they can afford it for their personal use, but training bodies may feel they should buy it – allowing for budgetary constraints. The pack is not without its merits and I shall probably donate mine to our regional tribunal office as a belated leaving present – I retired a year ago!

National Service Framework for Older People

This National Service Framework (NSF) is welcome. It confirms that the health and welfare of older people is to be addressed as a priority – and comes only fourth in the series of such publications – after cancer, coronary heart disease and mental illness. All the publications intend to improve services and reduce inequalities between services received by different groups in different parts of England.

Old age psychiatrists, and other professionals, have waited with eager anticipation for this publication’s delivery, uncomfortable that older people and people with dementia had been excluded from the otherwise excellent NSF for Mental Illness. There were delays in delivery and ‘false start’ announcements of publication before Christmas 2000. All this added to the excitement and sense of moment. Momentous it has indeed proved, and interest has been heightened by controversy, antipathy and expressions of doubt from senior sources within the establishment of care of the elderly.

A great deal of work was undertaken by expert working groups – including members with diverging views. Their contributions were interpreted by civil servants and subject to the stamp of Professor Philp who was appointed Tzar toward the end of the process. These editorial intrusions have irritated some of the figures from the working groups, but they have resulted in a brave and fairly cohesive document, which will help us improve the health of older people and the services they receive. Our society and our government stigmatises and discriminates against older people, particularly those with mental illness and from disadvantaged groups and localities. This phenomenon is nailed.

Some health care professionals have sought to interpret ‘equity’ for old people in terms of admission to the same acute hospital wards as younger people. This false vision of equity is confronted.

Older people with serious mental illnesses of all kinds, including those who survive into later life with chronic or relapsing disorders, require the same discipline and quality of care guaranteed to younger people with mental illness by the NSF for Mental Illness.

The exclusion of older people from consideration by the NSF for Mental Illness is declared, politely, to be unacceptable.

A comprehensive framework ranges from health promotion to continuing and terminal care across the boundaries of personal, family, voluntary, social and health service responsibilities – pretty thrilling for a Department of Health publication. The practical implication of the NSF for Older People is the presence of a hierarchical strategy of implementation: national, regional and local mental health professionals are involved at all levels and should be included in working groups for all eight standards (and the group considering medication).

The process and its outcome will bond old age psychiatry more securely within health care for the elderly. Its interface with general psychiatry will benefit from clarification, informed by a determination that the best interests of individual patients and their families remain paramount.

800 Individual Statement Questions for MRCPsych
Part 1

By Maju Mathews.

The multiple choice questions (MCQs) in both parts of the MRCPsych examination used to incite violence in hundreds of candidates who were unlucky enough to have to make sense of them. They seemed to be either excruciatingly obscure or so vaguely worded with ‘clues’, such as ‘commonly’, ‘frequently’, or ‘not entirely unusual on the third Monday of an unusual month’... so as to be only understandable by James Joyce. And no one understands James Joyce!

Maju Mathews has tailored his book to the new MRCPsych Part I examination format. The book consists of four separate papers. A paper comprises 200 state- ments, each of which is answered as true or false.

Developing MCQ examination papers is a real headache. Getting the balance between the questions that a buffoon
