Language and Perception

"This rich and learned book is a search for a theory of meaning, for a way of relating perception and language. It is new and powerful... The authors set forth a conceptualist theory of meaning backed up by a powerfully formulated procedural semantics..."—*Jerome S. Bruner*

"A major advance towards a psychologically realistic theory of the lexicon, surpassing previous work in scope and sophistication. It is an approach to the study of meaning that is of the greatest importance for both linguistics and psychology."

The Grasp of Consciousness

Action and Concept in the Young Child

One of the most important names in twentieth-century psychology draws on and extends our knowledge of the process of learning in this brilliant new work.

People Speaking

Phonetic Readings in Current English

J. Windsor Lewis

This is a collection of 50 conversations and anecdotes, in style broadly within colloquial educated British English, presented in three different ways: in phonetic script, stress marked; in ordinary spelling with simple intonation marks; and in phonetic script bearing more detailed intonation marking with additional information on rhythm and pauses. The phonetic transcription used, and here further supplemented in the areas of rhythm and tone, is the one used in the *Oxford Advanced Learner's Dictionary of Current English* and in the author's own *Concise Pronouncing Dictionary of British and American English*. *People Speaking* is therefore the ideal practice book for this transcription.

A 60-minute companion cassette containing recordings of all the passages in the book is also available.

Notional Syllabuses

D.A. Wilkins

A taxonomy and its relevance to foreign language curriculum development

The author's ideas about syllabus design are seminal to the current debate on the need for a new, communication-oriented approach to language teaching. *Notional Syllabuses* will stimulate thought and experiments in the field of syllabus design, and will be of wide interest among educationalists as well as applied linguists.

"I regard my own contribution as having been principally to have provided a taxonomy through which semantically oriented language teaching can be systematically planned and, secondarily, to have helped to revise our understanding of the nature of language learning and teaching in the light of these innovations."

D. A. Wilkins, Senior Lecturer in the Department of Linguistic Science and Director of the Centre for Applied Language Studies at the University of Reading.

How to Do Things with Words

J. L. Austin

Edited by J. O. Urmson and Marina Sbisa

J. L. Austin's 1955 Williams James Lectures, 'a choice work by one of the most acute and original minds that England has produced in our time' (*The Times Literary Supplement*), were first published in 1962, the printed version being based upon his very full lecture notes. For this second edition the editors have returned to the original notes, and their revision of text and appendix makes this a clearer, and, at the same time, more faithful record of Austin's words. Second edition £1.50

New Orientations in the Teaching of English

Peter Strevens

In this volume Mr. Strevens identifies and surveys these issues in applied linguistics and language-teaching methodology which currently constitute the major concerns of the field. Many of the papers which have appeared before in print have been substantially rewritten so that, together with the papers printed here for the first time, they make a volume which is a coherent and accessible account of those new orientations. It will be of importance to teachers in training and students of applied linguistics and education. £5 paper covers £3

The Edinburgh Course in Applied Linguistics

Volume 4: Testing and Experimental Methods

Edited by J. P. B. Allen and Alan Davies

This volume is concerned with the role of testing and experimental methods in applied linguistics. This role is seen not only as an important extension of the theory and techniques discussed in Volumes 2 and 3, but also as a separate and central element of applied linguistics. After an introductory chapter which discusses the relation between tests and experiments, chapters 2 and 3 consider tests, first from the general point of view and then from the practical one. Chapters 4, 5, and 6 then consider experiments ranging from the description of data to the analysis of results and the use inference theory. £7.50 paper covers £6 *Language and Language Learning*

Variation and Change in Language

ESSAYS BY WILLIAM BRIGHT. *Edited by Anwar S. Dil.*
Presents eighteen essays, most of them devoted to the author's pioneering studies of the way certain North American Indian and South Asian languages reflect and interpret cultural history. The work covers general problems in ethnolinguistics and sociolinguistics, aspects of South Asian languages (notably caste dialects and the relationship between language and social stratification), and North American Indian languages. Volume ten in the *Language Science and National Development Series*. \$10.95

Aspects of Chinese Sociolinguistics

ESSAYS BY YUEN REN CHAO. *Edited by Anwar S. Dil.*
Twenty-six essays by one of the most distinguished Chinese linguists of our time deal with over a half-century of the author's seminal research on various aspects of the Chinese language, including his field studies of Chinese dialects and his work on the unification and standardization of the language. The book concludes with an Author's Postscript in which Professor Chao reviews and reflects on his life work, and a bibliography of his work to date. Disorders of Fluency

And Their Effects on Communication

Peggy Dalton and W. J. Hardcastle

Studies in Language Disability and Remediation 3

The authors address themselves to the problem of deciding what constitutes a pathological disfluency as distinct from 'normal' nonfluency. In the first part of the book, they bring together research findings from a wide variety of disciplines including speech therapy, phonetics, linguistics, language teaching, psychology and sociology in outlining some of the general factors contributing to an evaluation of fluency. In the second part they discuss those disorders usually considered to be specific fluency problems, namely stuttering and cluttering. The authors stress throughout that disruption of fluency is a disability affecting communication as a whole for both speaker and listener.

Child Language, Learning and Linguistics

**An Overview for the Teaching and Therapeutic
Professions**

David Crystal

An introduction to the young child's acquisition of spoken and written language, written for all those concerned with helping the child to develop his language resources. There are two main ways to present the subject of linguistics: as an academic subject in its own right, or as a 'service discipline', a science which can be of service to the community as a whole, and of specific value to certain professions within it. Professor Crystal discusses the main assumptions, feelings and methods of the various professions concerned with the language of the young child, so that the problems can at least be anticipated and possibly resolved. He shows the contribution, potential and actual, that linguistics can provide.

DESCRIPTIVE LINGUISTICS: An Introduction

Second Edition

Winfred P. Lehmann, University of Texas at Austin

The second edition of this text is a major revision and reorganization. It remains an introduction to linguistics, but reflects the strong current interest in the language-oriented approach.

Bringing linguistic theory completely up to date, the author deals with the current status of the discipline, placing Chomsky and the structuralists in perspective. The material on transformational grammar has been extended and updated, while coverage of generative grammar has been amplified. The revision also features the addition of such topics as: language acquisition by children; relationships between literature and language; translation; proxemics; paralanguage; and social dialects.

New Organization

- The content has been reorganized to introduce students immediately to difficult concepts they will need to understand later in the text.
- New Chapter I, "What is Linguistics?" provides a clear introduction to the fundamental concerns of linguistics.
- New Chapter II, "What is Language?" gives the student a thorough overview of the basic concerns of language.

Improved and Strengthened Pedagogy

- Difficult *concepts, terms and procedures* are defined at the outset for students to understand and use later in the text.
- Many more *exercises* are included – more interesting and more accessible.
- *Review questions* at each chapter end provide a coherent overview of the material

- A new *Workbook* offers a useful and entertaining extension of the text. Major concepts are outlined, and additional content-specific exercises are clever and responsive to the needs of beginning students.
- An *Instructor's Manual* is available.

INTRODUCTION TO LINGUISTIC CONCEPTS

Bruce L. Pearson, University of South Carolina

This clear, comprehensive text develops the basic concepts and methods of linguistic analysis within an historical framework. While emphasizing the relationships and numerous applications of linguistics to human interaction, Professor Pearson traces the evolution of the *five major schools* of linguistic theory: traditional, historical, structural grammar and transformational grammar, and semantic analysis. Students learn that the study of linguistics does not begin and end with the study of transformational grammar, and that there is an underlying unity of concepts basic to all linguistic schools.

Approaches linguistics as a problem-solving discipline

- The text provides step-by-step solutions to a wide range of problems. Students discover for themselves how concepts apply to data from a variety of languages.
- The chapter on *Structural Grammar* features exercises providing practice in identifying phonemes and morphemes.
- An exercise in Chapter 3, "Historical Grammar," supplies data from which students establish historical relationships between languages.
- An accompanying *Workbook* contains graded exercises keyed to material in each section of the text.

Additional pedagogical aids include:

- Chapter *subsections*, numbered and titled for ease of cross-reference
- Comprehensive *summaries* and *suggestions for further readings* concluding each chapter
- *Key terms* in boldface, introduced in self-defining context
- *Annotated bibliography* and *glossary* of terms at the end of the text

Schank, K. Sornig, T. Suzuki, M.J. White, Y. Wilks, D. Wunderlich.

In recent years, linguists and workers in neighboring disciplines have developed an increasing interest in human linguistic activity (as opposed to the description of language systems). This interest has especially focused on the social aspects of the 'use' of language (sociolinguistics, language acquisition, teaching of foreign languages, 'language in context', theory of speech acts as a part of a general theory of social action, etc.) This interest is a clear consequence of the growing insight that every human *activity* (including linguistic activity) is *social* in nature.

The need for a theory of language use has been manifest for some time. *Pragmatics*, as a theoretical discipline, has formulated many questions in the area of the theoretical foundations of linguistics, that will help to clarify our understanding and increase our knowledge of language as one of man's tools for 'natural' as well as 'societal' interaction.

The **Journal of Pragmatics** is the first journal to aim at creating a theoretical foundation of pragmatic studies of language, and will cover all aspects involved. It will attempt to bridge the gap between the developing fields of sociolinguistics, psycholinguistics, man-machine interaction, applied linguistics, and several other areas.

1. Syntax and Semantics

Volume 8: GRAMMATICAL RELATIONS

edited by PETER COLE and
JERROLD M. SADOCK

The role of grammatical relations such as 'subject of' has recently become a topic of great interest to linguistic theorists. This volume is a collection of twelve papers dealing with the treatment of grammatical relations in modern linguistic theory and especially with a new form of generative grammar in which grammatical relations play a central role. The various papers deal with the following important topics and more: the role of grammatical case in linguistic theory; word order universals and grammatical relations; verb agreement and its interaction with grammatical relations; the relational hierarchy; the treatment of a highly ergative language; the properties of subjects; clause union; grammatical relations in verb-initial languages.

2. Grammar and Meaning

Papers on Syntactic and Semantic Topics

by JAMES D. McCAWLEY

Grammar and Meaning is the first anthology of Professor McCawley's virtually complete works on syntax and semantics during the years 1964-1971. The chronological arrangement of the articles enables the reader to see how the author developed his theory of grammar, in which no intermediate level of "deep structure" is recognized and surface structures are derived from the corresponding semantic representations through a single system of rules, namely, transformations. The rich annotations by the author himself on the works previously published will provide the reader with the author's current views on the topics discussed.

3. Freudianism

A Marxist Critique

by V. N. VOLOSINOV

translated by I. R. TITUNIK and edited in
collaboration with NEAL H. BRUSS

Since its publication in 1927, this long-unobtainable book by a young and unorthodox Soviet Marxist, who presumably later disappeared in the Stalinist purges, has become something of an underground classic. Its fundamental analysis and critique of the entire Freudian doctrine, carried out from the standpoint of a Marxist "study of ideologies," anticipates many of the positions of modern Structuralism. Claiming that the Freudian unconscious is only an aspect of conscious thought, the book views "inner" and "outer" speech as different forms of the same phenomenon—language—whose nature is basically social and historical. The book's insights—rich and suggestive even today—culminate in a view of human speech and language as providing the proper material and basis for a truly objective science of psychology. The book also includes Volosinov's essay "Discourse in Life and Discourse in Art."

4. English Quantifiers

Logical Structure and Linguistic Variation

by GUY CARDEN

English Quantifiers: Logical Structure and Linguistic Variation is a revised version of Professor Carden's Harvard dissertation. The major portion of this book is devoted to discussion of the non-regional dialectal variation among the speakers of American English with respect to the interpretation of sentences containing a quantifier and a negative. Using the theoretical apparatus of generative transformational grammar, Professor Carden gives a revealing account of the variation and discusses its theoretical implications in detail.

5. The Verb-Particle Combination in English

by BRUCE FRASER

This volume is a thoroughly revised version of Professor Fraser's Ph.D. dissertation (M.I.T., 1965). The author discusses the syntactic and semantic properties of the verb-particle combinations in English (e.g., *look up*, *think out*, *live down*) from the perspective of transformational grammar. In Chapter 1, the verb-particle combination is defined syntactically; in Chapter 2, the author discusses eight types of constructions which resemble verb-particle combinations but are not; Chapter 3 presents a survey of the past studies of the construction from the perspective of contemporary linguistic theory. The book also contains two appendices: a list of major verb-particle combinations, explained and illustrated, and the author's paper of the transformational analysis of idioms.

6. An Introduction to Natural Generative Phonology

by JOAN B. HOOPER

In Part I of this treatise on natural generative phonology, the author presents and explains the formal constraints against phonological abstractness and then compares the new theory to the more abstract, less constrained theory, emphasizing the empirical evidence in favor of constraints and investigating their consequences. Examining data from a variety of languages, she focuses on the constraints on phonological rules, the prohibition of extrinsic rule order, the nature of underlying lexical representations, and the nature of relations among lexical items. The second portion of the book discusses substantive constraints on phonological structures with an emphasis on a universal theory of syllable structure.

Arguments for a Non-Transformational Grammar

Richard A. Hudson

"This autumn, a London lecturer, Richard Hudson, will publish a new theory which could well replace Chomsky's grammar. American academics have already hailed it as the most important single contribution to the theory of language since Chomsky produced the mature version of his own ideas in 1965. Hudson's position is this. 'I don't disagree with Chomsky about the rules of the game', he says, 'what we are trying to discuss here is the nature of language. But I do think that his grammar is unnecessarily complicated, and it's wrong.'

"Hudson's case is that Chomsky took a wrong turning at the start of thinking about how language works. We have seen how, to Chomsky, 'deep structure' became necessary because the existing rules were not enough to explain different meanings for the same sentence. But Hudson says that there is an alternative. 'You can just say,' he suggests, 'that the rules we used to have were a rotten way to analyse a sentence.'

"He rejects too, Chomsky's explanation of how language can be analysed. That explanation involves transformations — the ways that deep structure turns into the words we actually use. The idea gives the name to Chomsky's theories — 'transformational grammar.'

'I don't believe human beings think in the way Chomsky's theories suggest,' Hudson says. 'I don't believe that when someone says, 'he is working,' he is really thinking 'he present being work' as Chomsky says . . . Instead of deep structure and transformations, Hudson proposes a way to map out the structure of a sentence on just one level. The result, called 'daughter-dependency theory', sounds like an immensely sophisticated version of familiar schoolroom ideas about grammar.

"For, as Paul Postal, working independently from Hudson, says: 'All those traditional ideas like subject, object and indirect object don't have a role in transformational grammar. They're marginal. But I'm finding that we still need to use them.'

"And Hudson suggests, half-joking: 'After all, schoolchildren and teachers and people who are naive about the theory of grammar — they've all found this way of looking at sentences convincingly for two thousand years.'

"His grammar involves a complex system of classification of words. 'I feel intuitively that's right,' he says. 'Children have to learn to classify objects, after all, in very many complicated ways. It makes sense to suggest that they do the same with words.'"
